

# Oceans

Lorna Freytag

From space our planet looks like a

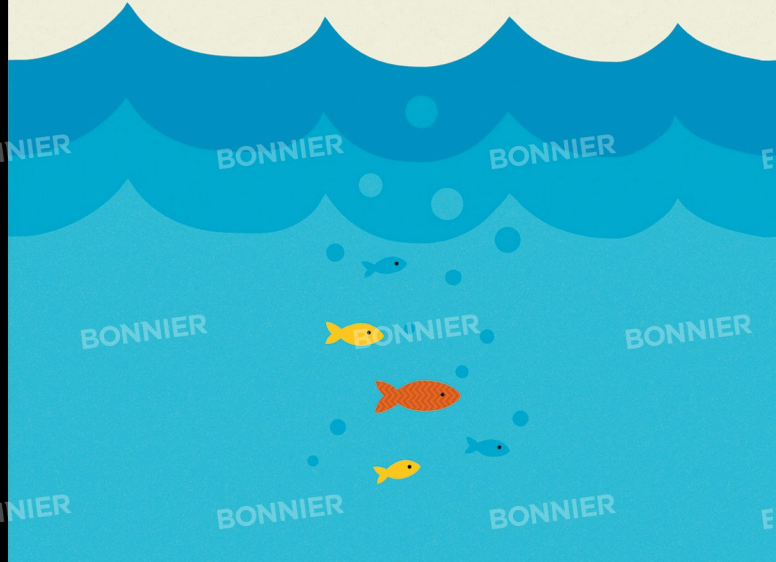

small

blue

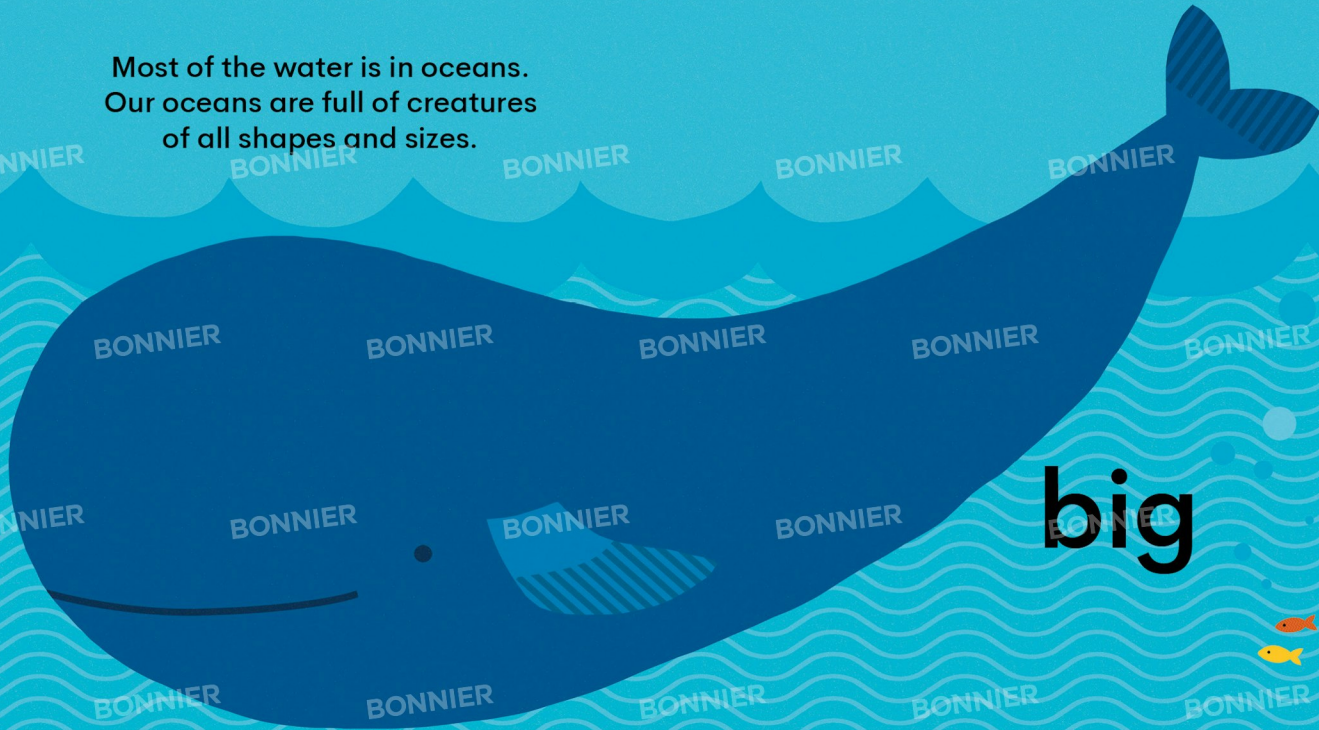

dot.

It is blue because most of Earth  
is covered by water.

Most of the water is in oceans.  
Our oceans are full of creatures  
of all shapes and sizes.

Oceans

help

to

make

the

air

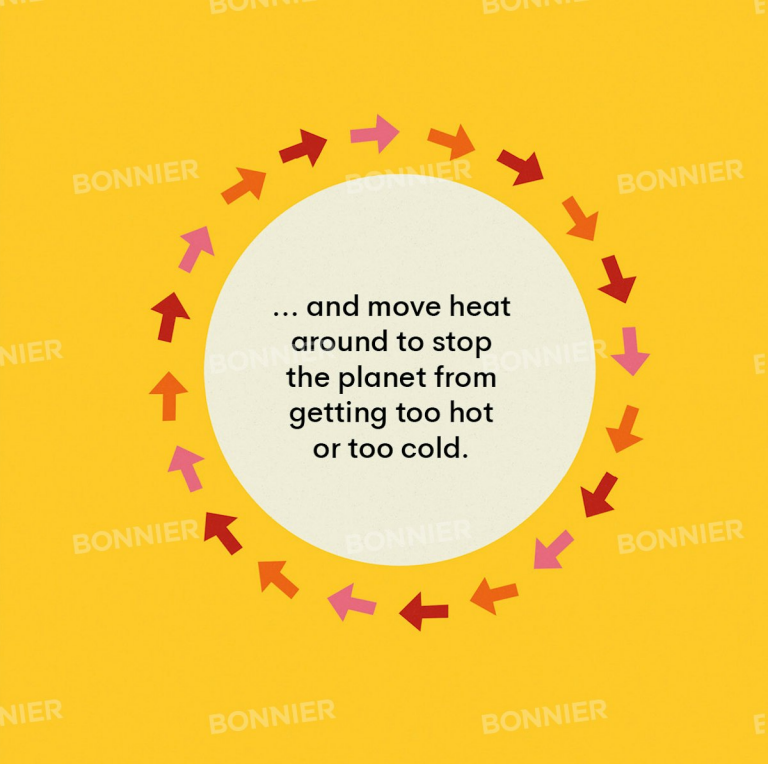

we

breathe.

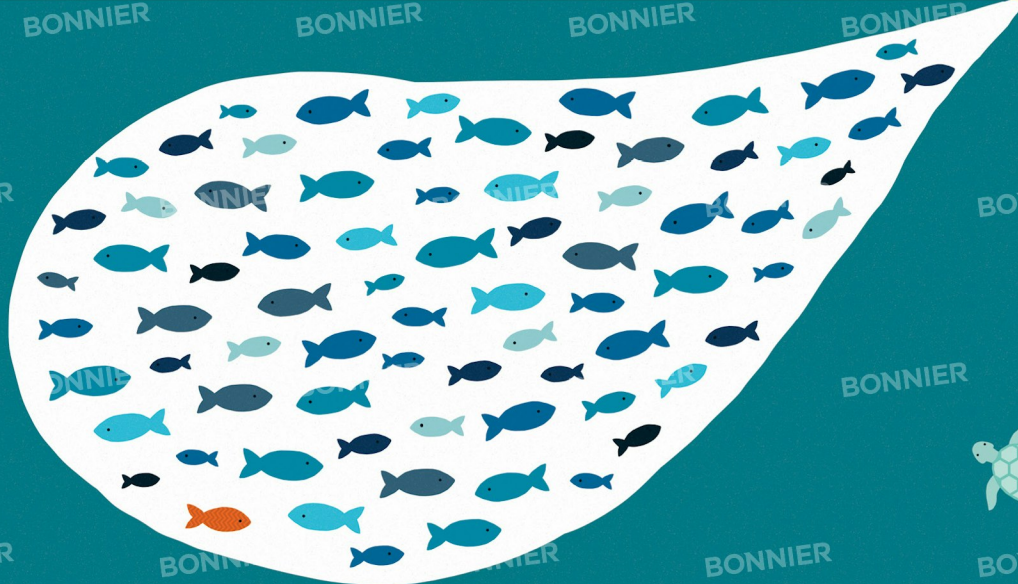

Oceans make the rain  
that we need to grow  
food...

... and move heat  
around to stop  
the planet from  
getting too hot  
or too cold.

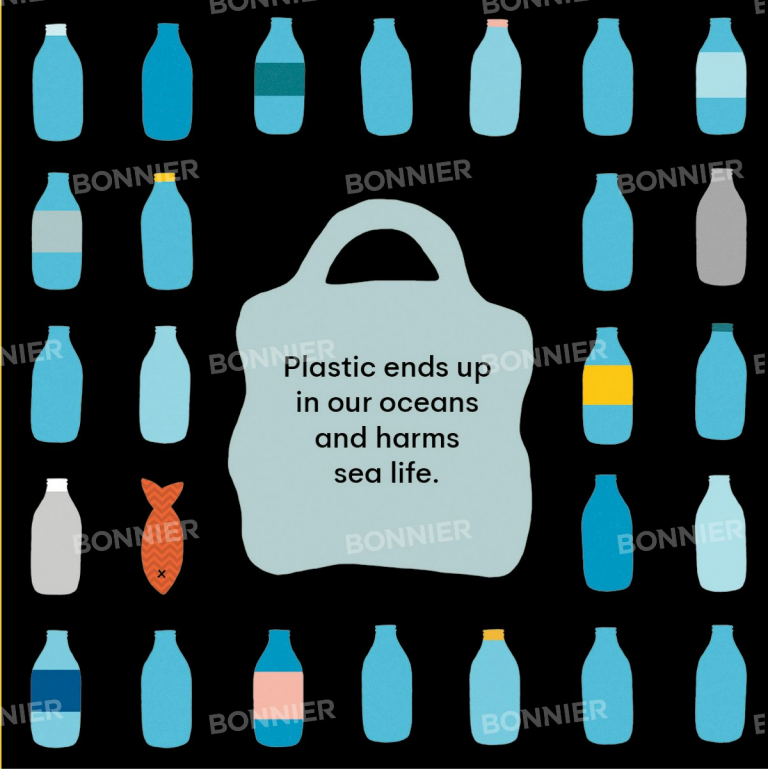

But the oceans need our help.  
Too many fish are being taken from the sea.

Ships and oil rigs are making  
our oceans dirty.

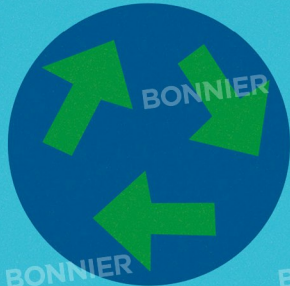

But there is a lot you can do to help.

You can use  
reusable bottles  
and bags.

You can recycle.

Or you can  
help clean  
up a beach.

A little help  
can make a  
**BIG**  
difference!
