# Brush and Shine

with  
**FLAPS**  
and  
**SLIDERS**

Fernando Martín

Squeeze the toothpaste out.  
It doesn't need too much!

**TOP TIPS**

Pick a child's toothpaste, as adult ones contain more fluoride. Try out a few flavours: many children dislike mint. Only use a small smear of toothpaste.

Then open wide – or pull  
a face – let's see those  
teeth to brush.

**TOP TIPS**

Pulling a funny face can encourage children to open their mouth nice and wide. Being silly helps them get involved and have fun, too!

**TOP TIPS**

Many children find role-play with toys helps them practise real-life activities. Why not take teddy or dolly along to have their teeth brushed, too?

Now let's ALL brush –  
and teddy, too!  
Together it's more fun.

Next rinse under the tap.  
You can show teddy how it's done!

Brushing your teeth together is a great way to lead by example. Let your child see exactly what you are doing and try to copy you.

TOP TIPS

Using a timer, listening to a song, or watching a short video can help children brush for the recommended 2 minutes.

Mum sets a timer on her phone, and picks a song to play.

Side to side, then up and down, we *brush-brush-brush* away.

Let little ones hold their own toothbrush if they want to. You can hold younger babies on your lap while you brush their teeth for them.
