INTRODUCTION

We love science fiction because it opens up a universe of possibilities – alien planets, other dimensions, vistas of time and space. It is a place where we can meet strange alien life forms, hyperintelligent machines, infernal mad scientists, and perhaps most importantly, ourselves (but evil, and with a goatee).

From the depths of Frankenstein's laboratory to the distant sands of Arrakis, science fiction films have shown us countless wonders.

But more than that, science fiction has always been a genre about asking questions - the big questions that have baffled philosophers, scientists and thinkers since the dawn of humanity.

Are we alone in the universe?

Where might we end up if society continues along its current path?

How might history have turned out differently?

What, ultimately, is it that makes us truly human?

And which comedic detective was played by the same actor as the flying saucer captain in Forbidden Planet?

Within the pages of this book, you will find the answer to precisely one of these questions.

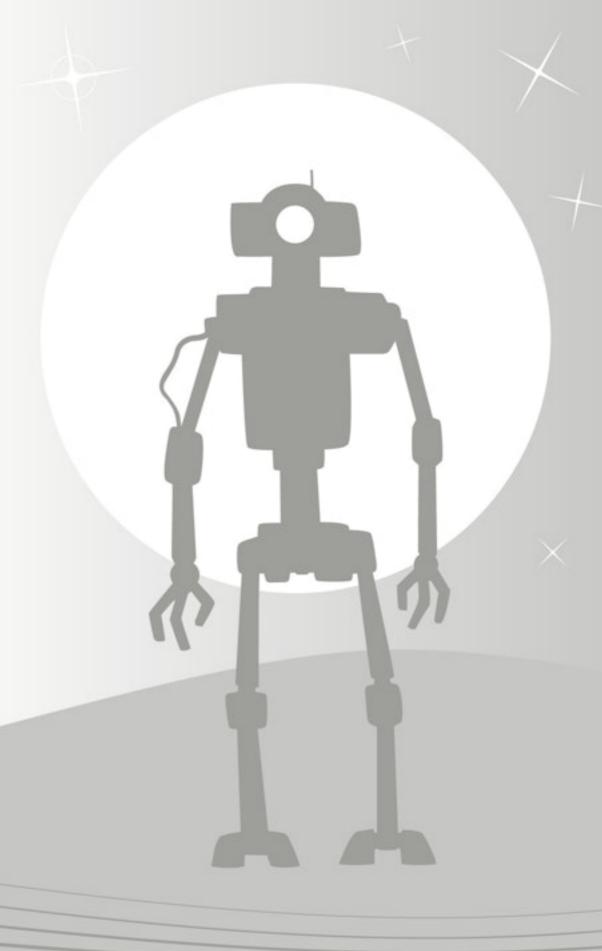

But some questions are harder than others. If you're a science fiction movie novice, you'll want to start with our Caveman-level questions for each quiz. If you consider your science fiction movie knowledge to be a bit more evolved, the Astronaut-level questions are for you. Then again, if your science fiction movie knowledge has transcended its material form to become a being of pure energy, the Pan-Dimensional Star Baby-level questions will really test you.

ROBOTS AND AI

The word 'robot' is barely more than a hundred years old, but the concept predates modern science fiction as we know it. Its roots go back beyond Frankenstein and the chess-playing 'Mechanical Turk' hoax, to the myth of the Golem, or Homer's lliad where we find "handmaidens wrought of gold in the semblance of living maids".

For as long as we have built machines, we have noticed that, actually, humans look a bit like machines, and from there, it's a short leap to realising we can make machines like humans.

Machines that will do everything we say and, most importantly, never rise up and kill us all.

HUMANOID ROBOTS

If you're building a robot, why mess with a classic design? Two arms, two legs, one head, free will, it's a classic combination. The problems start when robots are a bit too good at looking like humans, and you don't know whether your best friend is a robot. Then the real problems start when you don't know if you are a robot...

- Westworld (1973) shows us a Wild West theme park overrun by killer robot cowboys. But what was the other deadly theme park its writer is known for?
- 2. In The Stepford Wives (1975), Katharine Ross discovers a plan to replace her with a robot housewife – but who replaces her as the star of the film's 2004 remake?

MONSTERS AND MUTANTS

Environmental organisations estimate that between 10,000 and 100,000 species go extinct every year. But how many new ones are evolving? How many linger, still undiscovered on some ancient island or in the deepest underwater crevice? And how many, even now, are growing in some unsuspecting petri dish in some classified government laboratory?

28

PREHISTORIC BEASTS

A lot of science fiction talks about humans being the most dangerous animal, because of our ability to think, build tools and work together. But some science fiction talks about the animals that ruled the Earth before humans, who were dangerous because they were massive and had really sharp teeth.
