Art of Protest

INTRODUCTION

When I was a kid growing up in Mississippi and Tennessee in the United States, I learned early on about social injustices that exist in the world.

I remember defending myself against bullies who did not like me because of my dark skin. I recall watching my favourite TV shows and learning about South African apartheid, police brutality, the global AIDS crisis and historic movements for civil rights through episodes that dared to highlight these causes. As I recognised the power of the media in expanding my knowledge, I began to create art in my teens that reflected the issues happening around me - 9/11, Hurricane Katrina, the Jena Six trials. And by the time I found myself as an arts organiser on the ground in the 2014 Ferguson Uprising, I felt equipped with the experience to deploy art as a way of bringing people together to raise our collective voices.

Throughout this book, you will learn the art of protest through the work of artists, experiences and campaigns that have been created across the world to protest social injustices and advocate for the rights and liberties of diverse people. You will learn about the art of protest, and how it can be used to create change, inspire, and help you connect with others. You will also learn about the art of protest, and how it can be used to create change, inspire, and help you connect with others.

With this, you might be more aware of the issues, causes and global concerns that matter to you. Our society constantly experiences waves of social movements, campaigns for justice and rights against climate change and disease on a global scale. And as we move forward, it is my hope that this book will encourage and inspire you to use art as a language and movement that we have to champion your chosen cause.

01 WHY ART MATTERS IN SOCIAL MOVEMENTS

MY STORY AS AN ARTIST IN FERUGSON

On August 9, 2014, my life - like those of many in my home city of St. Louis, Missouri - was forever changed when I learned that a teenager had been killed by a police officer while walking along the streets of his grandmother's neighbourhood. His name was Michael Brown Jr., and his body lay in the street for four and a half hours as news media captured photos and people crowded around in dismay. Over the days that followed, hundreds of people began to march in protest across the small municipality of Ferguson, Missouri, where he lived. I was one of them, and after daily - and when nightly - protesting, I wanted to do something more.

At that time, I was an advocate of our local contemporary art movement. I had learned an intense lesson in social work, and the lessons were a combination of social and artistic. I was a community leader and organizer in a community that matter to me. I was a community leader and organizer in a community that matter to me. I was a community leader and organizer in a community that matter to me.

It was my hope that this book will encourage and inspire you to use art as a language and movement that we have to champion your chosen cause.

WHY ART MATTERS IN SOCIAL MOVEMENTS

Most art that is created in protest will not be acquired by museums, nor is this usually the goal of activists and artists working together. Most often, we aim to reflect and respond to the immediate causes that are grounded in our social movements. And whether used in a march, a social media campaign or as guerrilla art in a public space, protest art helps social movements inform the public of issues, challenge the status quo, convey collective goals and messaging, imagine a vision of change and persuade others to take action.

Informing the Public
When used in public spaces, protest art serves as a mighty tool to help people learn about social issues. As an example, *Chalked Unarmed* was a guerrilla art series by public performance artist and *Mirror Casket* collaborator Mallory Nezam. The project invited citizen collaborators to create chalk outlines, like police outlines of murder victims, on pavements across their communities. Each outline was filled with the name, date and location of a person who had been murdered by a police officer.

Making Messages Visible
In protests across the globe, people tend to write and illustrate their calls to action on cardboard, posters or banners.

At marches, where it can be hard for target audiences to hear each individual's voice, signage allows each person's message to be seen, and the results are often full of creativity and passion.

Imagining a Vision for Change
Protest art effectively helps people develop a language and create a vision for how outcomes in a community can be better. While projects like the *Mirror Casket* challenge viewers to look inward to see themselves differently and empathise with those whose lives have been lost, other works may propel people forward to imagine a new reality.

Influencing Action
Efforts like *Decolonise This Place* and *Theatre of the Oppressed* use performances, flash mobs and "spect-acting" (whereby a member of the audience also becomes part of the performance) to engage with people across the world and explore how justice and equality can become reality. Each experience that the artists facilitate is directly tied to demands for organizations and government leaders to change a policy, boycott unjust spaces, disinvest from harmful companies or stop violent or inequitable public actions. For example, *Theatre of the Oppressed* ran a performance in 2016 entitled *The Housing Circus*, based on the real life experiences of different individuals trying to receive housing benefits. Told from the perspective of LGBTQ+ individuals and war veterans living in New York City, *Theatre of the Oppressed* used this performance to suggest policy changes.

Challenging the Status Quo

One of the common impacts of protest art is to push against the norms and rules of society. Artists like Elizabeth Vega, Ai Weiwei, Banksy and others have mastered using art as dissent. Such works often take existing materials and cultural artefacts and re-purpose them, or they might remix messages from advertisements, buildings, monuments, news articles or political documents in ways that point to their hypocrisy, outdated messages or other flaws.

Human 2.0

INTRODUCTION

[illegible]

THE FIRST PROSTHESES

For as long as humans have been around, we have been losing limbs or are born without them. Whether due to an injury or congenital impairment (a condition that is present from birth), people have been trying to replace missing arms, legs, fingers and toes for thousands of years. Early prostheses were revolutionary for their time, yet their inventors did not have the technology needed to provide better functionality and comfort. Even so, some of these early prostheses closely resemble those that exist today.

The earliest known example of a prosthesis (an artificial body part) belonged to an Egyptian noblewoman over 2,000 years ago. This wooden prosthesis replaced the big toe on her right foot, and even had a ridge in the shape of a nail carved into it to make it appear more realistic. It would have been strapped onto her foot with string, and scientists believe that it would have greatly aided her balance.

Count Götz von Berlichingen
Perhaps the most famous example of an early prosthetic is that belonging to the German knight, Count Götz von Berlichingen, who lost his hand during battle in the early 1500s. Undeterred, Count Götz asked local craftsmen to create an iron hand with digits (fingers and thumb) that could lock into place, so he could hold a horse's reins or a weapon. His love for warfare became so famous that some people believe he inspired the phrase, "To ride with an iron fist."

WHAT IS BIONIC?

Bionic refers to the transfer of technology between artificial objects and living organisms. The word itself comes from a combination of the Greek word for 'life', *bios*, and the word 'electronics'. It was coined by American doctor and ex-US Air Force colonel Jack E. Steele in the 1950s.

Prior to Shwede, the American linguist Edward Sapir developed the concept of "historicism" – the transfer of ideas from biology to technology. In 1905, Shwede presented an influential lecture and organized a gathering of experts on the limits of how new technologies could be discovered by looking at examples in nature. This field of research is known as biomimetics. A few of the best inventions to come from this field include streamlined sailboats inspired by the structure of whale's skin, Velcro® fasteners modeled on how hairy "giant" insects stick onto surfaces, and the shape of airplanes, which were designed by looking at how birds move through the air.

BIONIC LIMBS AND IMPLANTABLE DEVICES

A prosthesis can be internal or external to the body. The ways in which people can replace parts of their body can largely be broken down into two groups: bionic limbs and implantable devices.

'Implantable devices' is a broad term describing anything that is surgically implanted inside the body. Because surgery is required to gain access, these devices cannot easily be removed, and are typically designed to stay inside the body forever. Examples of these include pacemakers and cochlear implants.

Bionic limbs are artificial body parts, which are intended to replace the function of a human body part, such as an arm or a leg. These are attached to the body, usually via a belt, strap or socket, and can be easily taken on and off by their wearer.

If either a bionic limb or an implant has batteries that need to be charged, they are called 'active'. Those that do not are called 'passive'. Some implants, such as cochlear implants, need batteries. These sit outside the body and attach to the implant via a wire, so the user does not need surgery every time the battery runs out (see pages 28–29).
