- Introduces new concepts and vocabulary in a simple and accessible way.
- With bright and child-friendly artwork that complements the conversational text.

Little Explorers: Food

FOOD AND YOU

If you ate the same food every day, it could get pretty boring. Food is usually good for you, but it's important to eat a mix of different types of food to stay healthy.

Food Groups
Naturally, all food falls into different groups, depending on what it does for your body.

DIFFERENT DIETS
People across the world eat different kinds of food as part of their normal diet. This is called their diet. There are all sorts of different diets, but here are just a few of them:

VEGETARIAN
Vegetarians eat food that comes from plants, but they don't eat any meat or fish. (Veggie food!)

OMNIVORE
An omnivore eats both plant and animal food. (Humans are omnivores.)

HERBIVORE
Herbivores eat only plant food. (Cows, sheep, and rabbits are herbivores.)

CARNIVORE
Carnivores eat only animal food. (Lions and tigers are carnivores.)

Try to think up to eight types of food every day!

Sugars
Sugars make food taste good, but too many can be bad for you. They are found in many different foods, like cakes, biscuits, and soft drinks.

World Travelers
The climate and culture in different parts of the world affect what people eat. For example, in hot countries, people often eat fresh fruit and vegetables, while in colder countries, they often eat more meat and dairy products.

Today and Beyond
The food we eat today is different from the food we ate in the past. This is because of changes in the way we live and the technology we use to grow and transport food.

FOOD THROUGH TIME

In human's early days, humans ate what they could find in the wild. Over time, they learned to farm and to use tools to help them. The food they ate changed over time.

30,000 BC
Early humans ate wild fruits, nuts, and vegetables.

15,000 BC
Humans began to domesticate animals like cows and sheep, and to grow crops like wheat and rice.

1000 BC
The ancient Egyptians used papyrus to make paper, and they also used it to make boats and baskets.

1000 AD
The Crusades brought new spices from the East to Europe, which changed the way people cooked.

1500 AD
The printing press was invented, which helped to spread new ideas about food and health.

1800 AD
The Industrial Revolution brought new machines for farming and food processing, which changed the way food was produced.

1900 AD
The discovery of antibiotics helped to keep food safe from bacteria, and the invention of the refrigerator helped to keep food fresh longer.

2000 AD
The internet and social media have changed the way we eat, with the rise of food delivery services and online food shopping.

2050 AD
Scientists are working on growing food in space and using 3D printing to create food, which could help to feed a growing population.

FINDING FOOD

Where does food come from? It's not always obvious. Some food comes from the ground, some from the sky, and some from the sea.

Harvesting
Farmers use tools like tractors and combine harvesters to gather crops from the fields. The weather can affect when and how crops are harvested.

Tractor
The tractor is the most important machine on the farm. It can pull many different attachments, like ploughs and harrows, to help with different jobs.

Combine Harvester
The combine harvester is a machine that can cut and thresh crops in one go. It's a very important machine on the farm.

Store
The store is where the farmer keeps their crops. It's a big building with many shelves, and it's used to store food until it's ready to be sold or used.

Busy bees
Bees are very important to the food we eat. They help to pollinate many different types of plants, which allows them to grow and produce food.

Factory
The factory is where food is often processed. It's a big building with many machines, and it's used to make things like bread, milk, and meat.

Delivery
The delivery van is used to transport food from the farm or factory to the shops and homes. It's a very important part of the food supply chain.

FABULOUS FOOD!

Food can be yummy in your tummy, but what is it really? Food is your body's fuel. It is the energy that helps you move, think, and play. When you run out of fuel, you need to fill up! We all need food to live.

Nutrients
Nutrients are important things found in food. Your body needs them to grow and survive. Nutrients can be vitamins, minerals, carbohydrates, proteins, fats, and water.

VITAMINS
Vitamins help your body work as it should. There are 13 known vitamins, and they all have different jobs. Vitamin C is in fruits such as oranges. It helps keep you healthy.

MINERALS
Minerals are a bit like vitamins. They help the body work well. Iron is an important mineral found in meat and spinach.

CARBOHYDRATES
This is where a lot of your energy comes from. The body breaks down carbohydrates into a substance called glucose, which acts as fuel. Carbohydrates are found in foods such as whole grains and potatoes.

PROTEINS
Proteins are like building blocks that help your body grow. They can be found in eggs and beans.

FATS
Fats can provide energy and help the body absorb important vitamins. Healthy fats can be found in foods such as nuts and fish.

THE DIGESTION QUESTION
How does the food you eat turn into energy inside your body? And where does it go? This process is called digestion. Together, the parts of your body that help break down and use food are called the digestive system.

Mouth
This is where it all starts. You take a bite and crush up food with your strong teeth. Munch, crunch, munch!

Desophagus
Food travels down, down down the tube.

Stomach
The stomach stores food, mixing it with acid and enzymes.

Intestines
The sticky liquid moves through the intestines. Nutrients are absorbed into the bloodstream and taken to other parts of the body.

Other parts of the digestive system: Mouth, Desophagus, Stomach, Small intestine, Large intestine.

I'm hungry!
