

DK - FBF24 - Non-fiction

Discover the rich history, vibrant culture and unique identity of each nation through its flag!

- A vibrant exploration of our world's marvellous flags! Take a fact-filled and fun journey across the contents to discover all that lies in our national flags.
- Content is split into 5 chapters based on the continents: Europe, Asia, the Americas, Africa and Oceania. Each section features a chapter opener, 4-5 spreads looking at specific flags in detail, and a theme spread which looks at the world more broadly.
- Feature spreads look at an individual flag's history, symbolism and meaning, and also include 2 or more other flags which share a similarity in some way, whether that be a symbol, geographical location or a shared history.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

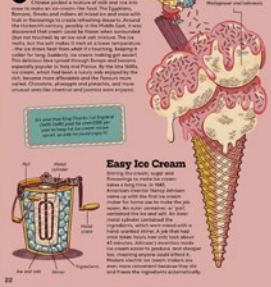

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

On the hot day of August 18th, 1791, a Frenchman named Nicolas-Louis Clément was in the kitchen of a Parisian hotel. He was making a special dessert for a guest. He had a recipe for a dessert called 'glace' which was a mixture of cream, sugar and fruit. He was using a hand-cranked machine to mix the ingredients. The machine was made of wood and had a large wheel on the side. He was turning the wheel and the mixture was being mixed. The machine was called a 'glacière' and it was used to make ice cream. The first ice cream was made in Persia in 500 BC. It was made from milk and sugar. The Persians called it 'shir azhar'. The word 'ice cream' was first used in 1682. The first ice cream factory was built in 1774 in Paris. The first ice cream machine was invented in 1791 by Nicolas-Louis Clément. The machine was called a 'glacière' and it was used to make ice cream. The first ice cream was made in Persia in 500 BC. It was made from milk and sugar. The Persians called it 'shir azhar'. The word 'ice cream' was first used in 1682. The first ice cream factory was built in 1774 in Paris. The first ice cream machine was invented in 1791 by Nicolas-Louis Clément. The machine was called a 'glacière' and it was used to make ice cream.

Easy Ice Cream

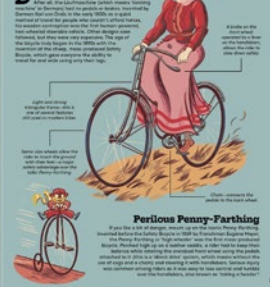

1. Put the cream, sugar and fruit in a bowl. 2. Mix with a hand-cranked machine. 3. Pour into a cone. 4. Enjoy!

Bicycle

"Freedom on two wheels"

15

Did you know that the first bicycle was called a 'velocipede'? It was a wooden board with two wheels. The front wheel was larger than the back wheel. The rider sat on a seat and held the handlebars. The rider had to push off the ground with their feet to move. The first velocipede was invented in 1817 by Pierre Michon in France. The first bicycle was invented in 1868 by Kirkpatrick Macmillan in Scotland. The first bicycle was called a 'boneshaker'. The first bicycle was made of wood. The first bicycle was called a 'velocipede'. The first bicycle was invented in 1817 by Pierre Michon in France. The first bicycle was invented in 1868 by Kirkpatrick Macmillan in Scotland. The first bicycle was called a 'boneshaker'. The first bicycle was made of wood. The first bicycle was called a 'velocipede'.

Pertious Penny-Farthing

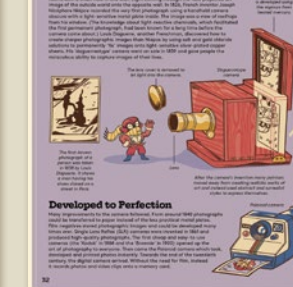

It was the first of a new design, much like the one seen today. The first bicycle was called a 'velocipede'. The first bicycle was invented in 1817 by Pierre Michon in France. The first bicycle was invented in 1868 by Kirkpatrick Macmillan in Scotland. The first bicycle was called a 'boneshaker'. The first bicycle was made of wood. The first bicycle was called a 'velocipede'.

Camera

"Tag along"

24

Although it's not a new invention, the camera is a very important one. The first camera was invented in 1816 by Nicéphore Niépce in France. The first camera was called a 'chambre noire'. The first camera was made of wood. The first camera was called a 'chambre noire'. The first camera was invented in 1816 by Nicéphore Niépce in France. The first camera was called a 'chambre noire'. The first camera was made of wood. The first camera was called a 'chambre noire'.

Developed to Perfection

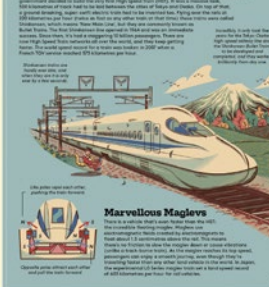

The first camera was called a 'chambre noire'. The first camera was invented in 1816 by Nicéphore Niépce in France. The first camera was called a 'chambre noire'. The first camera was made of wood. The first camera was called a 'chambre noire'.

High-Speed Train

"10-speed"

25

By the 19th century, the world was full of steam trains. The first steam train was invented in 1825 by George Stephenson in England. The first steam train was called a 'locomotive'. The first steam train was made of metal. The first steam train was called a 'locomotive'. The first steam train was invented in 1825 by George Stephenson in England. The first steam train was called a 'locomotive'. The first steam train was made of metal. The first steam train was called a 'locomotive'.

Marvelous Maglevs

The first maglev train was invented in 1971 by Japanese scientists. The first maglev train was called a 'maglev'. The first maglev train was made of metal. The first maglev train was called a 'maglev'.

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine on a hill. The first wind turbine was invented in 1891 by James B. Francis in the USA. The first wind turbine was called a 'windmill'. The first wind turbine was made of wood. The first wind turbine was called a 'windmill'. The first wind turbine was invented in 1891 by James B. Francis in the USA. The first wind turbine was called a 'windmill'. The first wind turbine was made of wood. The first wind turbine was called a 'windmill'.

Green Energy

The first wind turbine was called a 'windmill'. The first wind turbine was invented in 1891 by James B. Francis in the USA. The first wind turbine was called a 'windmill'. The first wind turbine was made of wood. The first wind turbine was called a 'windmill'.

Helicopter

"A sailing way to fly"

35

What if you could fly? The first helicopter was invented in 1783 by the Montgolfier brothers in France. The first helicopter was called a 'hélicoptère'. The first helicopter was made of wood. The first helicopter was called a 'hélicoptère'. The first helicopter was invented in 1783 by the Montgolfier brothers in France. The first helicopter was called a 'hélicoptère'. The first helicopter was made of wood. The first helicopter was called a 'hélicoptère'.

Versatile VTOLs

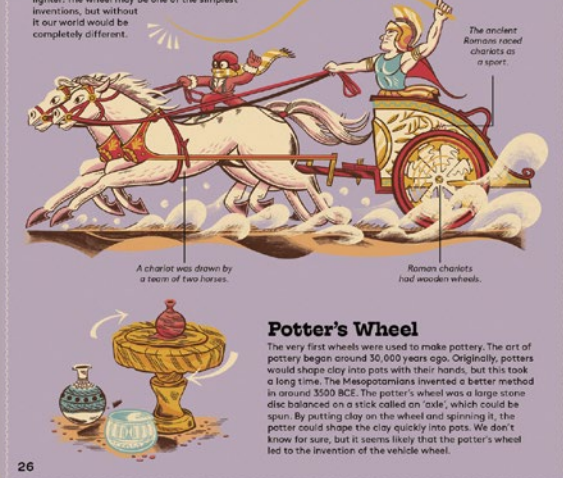

The first helicopter was called a 'hélicoptère'. The first helicopter was invented in 1783 by the Montgolfier brothers in France. The first helicopter was called a 'hélicoptère'. The first helicopter was made of wood. The first helicopter was called a 'hélicoptère'.

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles - no carts, cabs, bikes, buses, trucks, trains, cars or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3500 BCE. 3500 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips"

18

The invention of the Internet - a network of computers that 'speak' to each other - was a concentrated effort in the United States. The first computers were connected to each other in 1969, but scientists first began developing the Internet in the early 1950s during the Cold War (1947-1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: 'LOVE'. But only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want - books, food, holidays, cars - with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

This visually extraordinary book presents the history of money as it has never been seen before – from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

RICH AND POOR

THE HISTORY OF WEALTH

Wealth is the difference in wealth between the richest and the poorest. It has been around since the first humans lived. In the early days, wealth was measured in terms of land and livestock. As time went on, it became more complex, including money, property, and even knowledge.

WEALTH CONCENTRATION

One of the biggest reasons for inequality is the way that wealth tends to get concentrated in the hands of a few. This is often due to the fact that wealthy people have more resources to invest and grow their wealth. This can lead to a situation where a small number of people own most of the wealth in a country.

CAUSES OF INEQUALITY

There are many reasons for wealth inequality. Some people have more resources than others, while others have fewer. This can be due to a variety of factors, including education, opportunity, and even luck. Inequality can also be caused by the way that wealth is distributed in a society.

WHAT'S WRONG WITH WEALTH INEQUALITY?

When a small number of people own most of the wealth in a country, it can lead to a variety of problems. For example, it can make it harder for poor people to get ahead. It can also lead to a situation where the wealthy have more influence over the government than the poor.

GOLDEN YEARS

AN INTERNATIONAL SYSTEM

In the 1920s, the gold standard was a system where countries agreed to fix the value of their currencies in terms of gold. This was done to ensure that currencies were stable and predictable. However, this system had several drawbacks, including the fact that it required countries to hold large amounts of gold reserves.

THE COST OF WAR

World War I had a major impact on the gold standard. The war caused a massive increase in the demand for gold, as countries needed it to fund their military efforts. This led to a shortage of gold and a collapse of the gold standard.

THE GOLD STANDARD

The gold standard was a system where countries agreed to fix the value of their currencies in terms of gold. This was done to ensure that currencies were stable and predictable. However, this system had several drawbacks, including the fact that it required countries to hold large amounts of gold reserves.

However, this system had several drawbacks, including the fact that it required countries to hold large amounts of gold reserves.

FROM COUNTERFEIT COINS TO FALSE NOTES

ALVES dos REIS
MASTER COUNTERFEITER

For as long as money has existed, people have tried to forge it. Counterfeiting is the act of creating fake money that is indistinguishable from the real thing. This is a crime in most countries, but it has been around since the first coins were minted.

FIRST COUNTERFEITS

The first counterfeit coins were made in ancient times. They were often made of a different metal than the real coins, but they looked exactly the same. This was a major problem for the people who used the coins, as they had no way of knowing if they were being cheated.

THE FIRST COUNTERFEIT

The first counterfeit banknotes were made in the 17th century. They were made of paper and looked very similar to the real banknotes. This was a major problem for the people who used the banknotes, as they had no way of knowing if they were being cheated.

THE FIRST COUNTERFEIT

The first counterfeit banknotes were made in the 17th century. They were made of paper and looked very similar to the real banknotes. This was a major problem for the people who used the banknotes, as they had no way of knowing if they were being cheated.

FINANCIAL MARKETS

At regular markets people buy and sell things like food and clothing. At financial markets, people trade money-related assets. These include stocks and bonds. Stocks are shares in a company that the company sells to raise capital. Shareholders are paid dividends (regular sums paid out of the company's profits). Bonds are certificates issued by a government or corporation, promising to repay borrowed money at a fixed rate of interest. Financial markets can be physical places, like the New York Stock Exchange, or they can take place online.

THE FIRST BONDS

In the twelfth century, the government of Venice came up with a new way of raising money to fight a war. It offered its citizens certificates, known as prestiti, in exchange for a loan, promising to pay them back by a certain time, plus 5 per cent interest. These were the first government bonds. Before long they became a popular investment, and a market developed for the buying and selling of prestiti.

THE FIRST STOCKS

Founded in 1602, the Dutch East India Company was the first company to sell shares to the public. The money it raised from this funded its voyages to the East Indies, and it paid its shareholders out of the profits from its trade in enslaved people and spices. The shares were traded in the Amsterdam Stock Exchange, also established that year.

THE DAILY NEWS

OCTOBER 1929 NEW YORK CITY

THE WALL STREET CRASH

FINANCIAL MARKETS CAN BE VOLATILE. A RUMOUR OR A MINOR PIECE OF ECONOMIC NEWS CAN CAUSE BIG SWINGS IN PRICES. THE DESIRE TO MAKE MONEY OR AVOID LOSING IT IS A POWERFUL ONE, AND A HERD INSTINCT CAN SOMETIMES TAKE OVER WITH PEOPLE STAMPEDING TO BUY OR SELL. THE MOST SPECTACULAR EXAMPLE OF THIS WAS THE WALL STREET CRASH OF 1929.

THE ROARING TWENTIES

The 1920s was boom time in the United States. There was a spirit of optimism in the country and it became fashionable to play the stock market. Share prices soon rocketed to a point where they represented a value far greater than the total worth of their companies' assets. This was now a mania – a period when everyone, from wealthy financiers to common investors, lost touch with reality and seemed to believe that prices could keep rising forever.

AFTER EFFECTS

As a result of the crash, businesses were bankrupted, banks closed, millions lost their jobs and the world plunged into a deep and lasting economic depression. This had a big political impact. In Europe, extreme right-wing parties exploited the misery of mass unemployment, blaming 'foreigners' such as Jews. Germany's Nazi Party rose to power in 1933. The consequences for the world would be devastating.

DISASTER

The crash occurred at the end of October 1929, during three calamitous days of trading at the New York Stock Exchange on Wall Street, when huge numbers of people decided collectively it was time to sell. With so many sellers, there were few buyers, and share prices plummeted. In those three days, billions of dollars were wiped off the value of American companies. And over the following years the market kept on falling. By 1932, stocks had lost nearly 90 per cent of their pre-crash value.

Explore the legendary world of fairies in this stunningly illustrated guide to the mythical realm.

- An incredible collection of fairies to be enjoyed by children and adults alike.
- *Faedom* also includes facts about the natural world including lunar cycles, astrology, crystal healing and herbology, bringing the world of fairies to life.
- Stunning ethereal artwork by debut talent Nadzeya Makeyeva.
- Large format and foil cover finish makes this the ideal gift.
- Agnes Monod-Gayraud is an award-winning translator and editor. Lorna White is a writer and researcher whose focus and expertise is in Ancient Mythology and Folklore.

Locked in the Museum

An action-packed tour of the most marvellous museum in the world!

- A thrilling behind-the-scenes museum tour featuring six stunning gatefold scenes.
- Featuring artefacts from real-life museums around the world, the exhibits are organised into eight galleries: Dinosaurs and fossils, Nature, Human Origins, Ancient Civilisations, Art, Transport, Space, Science and Technology and Earth
- A fun and accessible cross curricular title perfect for curious kids who are interested in everything from ancient history and art, to STEM topics.
- Features a section on the challenges faced by modern museums and a glossary of tricky terms.
- Cover finishes: spot uv and emboss

From Cells to Ourselves

From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

Automotive celebrates the ingenuity and usability of cars, trucks and motorbikes past, present and future.

- Sample contents: Steam and Electric Automobiles, Early Engines, Monte Carlo Rally, Mass Production, Motorways, Motorbikes, Isle of Man TT, Daytona 500, Concept Cars, History of Formula One, Iconic Bridges, Trucks and Road Trains, Monster Truck Races, Hot Rods, Drag Races, Special Cars, Cars in War, The Future of the Automobile
- The follow-up title to the stunning *Locomotive*
- Perfect for car lovers of all ages
- Super cool artwork by award-winning artist Ryo Takemasa

SAFETY FIRST

A tragic piece of history was made in 1909 when an Irish woman called Mary Ward became the first person killed by an automobile. While riding in an experimental open-top, steam-driven car, she fell out and was killed. Since then, designers have tried to make cars safer and easier to drive. Here are just some of the safety features found on modern automobiles.

Many routers can come with some (and/or no) features listed as standard. Routers provide the drive with their real-time traffic statistics, graphs, directions and up-to-date traffic information.

When adaptive headlights sense a car approaching from the opposite direction, they automatically dip full beams to avoid blinding the driver. They also seem to follow curving roads in the road.

Anti-lock brakes stop the wheels from locking up and skidding if the driver puts on the brakes too forcefully. Throttle control ensures power is distributed evenly between the wheels, which helps the car maintain its grip even on wet or icy roads.

- FAMOUS RACES -
ISLE OF MAN
TOURIST TROPHY

Every summer, the Isle of Man hosts one of the most amazing, and exceptionally dangerous motorcycle events in the world: the *Tenby TT*, better known simply as the "TT". Unlike all motorbike races, the TT runs entirely on closed-off public roads, and riders from all over the world take their lives in their hands to speed, swap and cover their respective vehicles across the famous 60.2km long Mountain Course.

The TT has changed a lot since it started in 1907, with different routes and motorcycle types used over the years. These days, the first race is given over to practice sessions and time trials, and the second is the actual race. The 10-day event spectators like the crash as motorcycle street, jump, landing and over 2000km/h.

riders using all their skill to gain the greatest big time. And there is a world of difference between simply spending the time around a dedicated racing track in the nature of an amateur, often and then based on the big time. Riders must recognize nature's leading track lined with buildings, with its dips and rises. The terrain sends nerves and amazing concentration. One mistake, one misjudged pace, and you're likely to turn out to be another injury - or worse. Since 1,807, there have been around 200 riders killed. For comparison this thing is a vital part of the 77 experience, allowing them to become part of all this group. Riders ought to take in as long as possible before the world. However, recent changes - including riding along the number of spectators introducing better safety equipment and more up-to-date facilities - have made the event safer.

94

TRUCKS

With their growling diesel engines and 12 heavy-duty wheels, trucks are the workhorses of the road. That's nothing they can't handle. From food to furniture, petrol to paper, tree trunks to talcum powder. Without trucks and the people who drive them, our factories wouldn't function, our shops would be empty and our deliveries wouldn't be made.

Presumably, he realized how useful a freight vehicle powered by an internal combustion engine would be, and in 1895 a German mechanical engineer called Karl Benz invented the first truck. He was also the inventor of the first car – see page 16. Riding on four big wheels and powered by a rear-mounted petrol engine, it looked like a cart without the horses. When designs followed, but it took some decades of development before trucks began to take over from the mulecarts, cart-horses and carts. These days, trucks are the dominant means

The proper term for a truck that pulls a separate trailer is actually "tractor." The trailer is attached to the tractor using a device called the fifth wheel, which is located behind the cab where the driver sits.

Long-haul trucks have a long life, moving along highways and interstates on journeys that can last days. Many models have a sleep compartment behind the cab complete with bed, storage space

The average American long-haul truck driver will spend up to 300 days per year on the road, traveling over 100,000 miles per year, or around 800 hrs. per day. That's a long time to sit, and many drivers combine their driving/commuting to make their more comfortable.

ies to the PowerMax 2000. It's a Class 8 truck - the biggest available on the highways of the USA, the big one which houses the engine, means it's (technical) truck. But most the others are drive-also (the engine is called a prime mover). PowerMax 2000 has a conventional, allowing users to have three different engine types, options, wheel-hub and drive shaft, a choice from a wide variety of customer requirements.

Trucks had extremely heavy loads – sometimes linked trailers or trils – so they used powerful over-planting of gears (the maximum is 18 forward gears) to keep their running along when up long.

20

STEAM AND ELECTRIC AUTOMOBILES

Since their invention in the early 1800s, steam locomotives revolutionised the way people and freight were transported. However, some travellers wanted a more convenient vehicle that they didn't have to share and could use whenever they wanted. Some engineers created small, steam-powered road vehicles, while others decided to try electric battery automobiles. Many designs were created, but by the early 20th century it was clear that the internal combustion engine was going to be king of the road.

The first steam-powered road vehicle was designed by English inventor Richard Trevithick. Using a high-pressure boiler for more power, his Puffing Devil set off with six passengers in 1801 at a speed described by one witness as 'faster than I could walk' (about 6km/h). Unfortunately, only a few days after this historic journey, the boiler caught fire and Puffing Devil was destroyed.

Electric cars were very popular in Europe and the USA from the late 1800s to the early 1900s. They were quieter and smoother, didn't produce smoke and were easier to use than steam-powered automobiles. One of the first successful models was the *Flocken Elektrowagen*. Designed in Germany in 1888, its 1hp electric motor drove the back wheels and could reach around 16km/h.

One of the last and most advanced steam automobiles was the Doble steam car. Designed in 1924, the Doble Model E only required 30 seconds to boil the water needed to drive the engine, was easy to control and could reach speeds as high as 120km/h.

8

EARLY ENGINES

The age of the automobile really began with the invention of the internal combustion engine. When fuels such as petrol, diesel or kerosene are burned (or 'combusted') inside the engine (using an oxidizer such as air), they produce kinetic energy, which makes the vehicle move. Internal combustion engines are more fuel-efficient than steam engines, and proved far easier and more convenient to start-up, operate and maintain.

German inventor Karl Benz developed the first automobile powered by an internal combustion engine in 1885. His revolutionary Motorwagen had a 3hp petrol engine, three-spoked wheels with solid rubber tyres and one forward gear. Its top speed was around 16km/h.

The first mass-produced car was the Oldsmobile Model R Curved Dash; 19,000 were built between 1901 and 1907. It was more affordable than most other cars at the time, had a 5hp engine, 2 forward and 1 reverse gear and came as either a 2-seater 'runabout' or a 4-seater family car.

Created in 1901 by German engineers Paul Daimler and Wilhelm Maybach as a racing car, the Mercedes 35 HP was a huge step forward in automobile design. It had a powerful petrol engine mounted at the front that drove the back wheels, a hand brake and a foot brake, 4 forward gears and 1 reverse gear.

- **Celebrating 10 Years of Extraordinary Illustrated Books**

INTRODUCTION

Plumbers have dreamed about going to thousands of years. It's not hard to imagine our primitive ancestors, who pursued the whimsy of life to create beautiful cave paintings of the world around them – the landscapes, animals and each other – staring into the skies to watch birds wheel and swoop overhead and thinking to themselves, "Wasn't it fun to fly? And what does the world look like from up there?" You've probably had a similar daydream yourself: incubating your hands from above, then turning towards the sun, feeling the wind flow over your nose, and staring towards the horizon and the unknown world beyond.

The first true alienist capsule of fitting people in relation safety, and carrying them for descent, difference, more but as balloons. The first was launched to great fortune in France in 1783. Suddenly it was possible for people to take to the skies, and it indisputed a frenzy of public interest in the notion of flight. Many more designs followed. Different balloons were immediately put to use by armies to spy on enemy movements from aloft. But balloons are actively at the mercy of the wind, and pilots have to control over their direction of travel.

This changed one fateful day in 1903, when the first powered flight was achieved called the *Wright* was made. It only lasted for 12 seconds, but it was enough to change our world. From that moment on, the development of the airplane has never stopped. This constant advancement in aviation technology, funded with so much money, energy, materials and technical expertise, is carried out because airplanes are so useful. They transport people and cargo faster than any other vehicle. They are a vital part of military campaigns. They help us map, explore and learn about our world. They interact so with **astonishing** displays of speed and maneuverability. They connect us to all corners of the globe in a matter of hours.

Don your relaxation goggles and prepare for a breath-taking journey through the clouds.

- AMAZING AIRCRAFT -
WRIGHT FLYER

On December 17th, 1903, Wilbur and Orville Wright changed the world forever. For years, the mechanically-minded American brothers had shared a vision of building a machine that could fly further and more reliably than a glider, and while that air balloon, wasn't forced to fly in a particular direction by the wind, in short the first flying vehicle that the pilot had complete control over. After years of planning and countless experiments, their vision became a history-making reality on the sandy dunes of Outer Banks, North Carolina, USA.

off. Wilbur ran alongside as the flyer tumbled down a wooden launch rail, took off and flew close to the ground for 12 seconds. Three more flights occurred that day, the last being the longest at 59 seconds and

But this was only the beginning. News of the Wright brothers' incredible achievement spread, and soon other inventors were building on their ideas to create even more dramatically powerful airplanes. The first circumnavigation around the world was completed in four Douglas World Cruiser airplanes only 20 years later. By the 1930s, jet aircraft were soaring through the air. Today, we use aircraft to defend ourselves, ferry cargo, carry out the most dangerous operations, and explore and travel the world – miracles of flight as celebrated by the Wright brothers.

WOOD, CANVAS AND STRING

The airplane was only 70 years old and had hardly ever been used in combat when the First World War broke out in 1914. But over the course of the next five years, both sides realized just how useful these flying machines could be. *Aviation* technology advanced rapidly on each side stress to gain air superiority.

As the war progressed, both sides developed aircraft that were more manoeuvrable, could fly and gun at lower altitudes, and take more damage. As technology improved, combat aircraft could be put to more uses. As well as a fighter, the British *Sigbee Camel* was also used as a low-level 'bomber' strafing targets on the ground with bombs and machine guns.

machine

Five pilots who drifted over war-torn Europe needed safer routes and skill. However, many had very little training, and the experience was short. Pilots who shot down more than five aircraft were called 'aces'. This Fokker D-11 triplane was flown by German ace Manfred von Richthofen – also known as the Red Baron.

Discover 12 upheavals which changed the world forever.

- A thought-provoking exploration of the idea of revolution: how upheavals, ideas and technology have irreversibly changed the world.
- Content split into three distinct chapters: power struggles, social revolutions and new technology. Chapter openers discuss what the word “revolution” means in each of these contexts, while showing how the idea is linked across all areas.
- Written by long-time author and history enthusiast Joan Lennon, who is a Royal Literary Fund Fellow at Dundee University and regular contributor on The History Girls blog. Her previous non-fiction book *Talking History* was shortlisted for the SLA Information Book Award 2023 and longlisted for the UKLA Book Awards 2023 in the Information Books category.

Revolutions

The World's Last Mammoth and Other Missing Marvels

Get ready for a **MAMMOTH** mystery tour through the world's most infamous missing marvels!

- An irresistible introduction to history from the brilliant Mike Barfield, author of *A Day in the Life of a Poo*, *a Gnu* and *You*, winner of the 2021 Blue Peter Award for a Book with Facts.
- Mike Barfield is an award-winning author: Winner of the Blue Peter Award; Shortlisted for Sainsbury's Award; Shortlisted for Royal Society Young People's Book Prize; Shortlisted for the Association of Science Education prize AND MORE! Mike's books have sold in over 40 territories.
- Fun non-fiction edutainment for a younger age-range illustrated by the brilliant Franziska Höllbacher!öllbacher!öllbacher!

The World's First Human Cannonball

Roll up, roll up! Get your tickets for a whirlwind tour through history's weirdest and wackiest jobs!

- An irresistible exposé into the world of work from the brilliant Mike Barfield, author of *A Day in the Life of a Poo*, *a Gnu and You*, winner of the 2021 Blue Peter Award for a Book with Facts.
- Featuring the weirdest and wackiest jobs throughout the ages, this book is packed with facts for curious minds. Includes jobs in travel, science and sport, as well as the worst jobs in history... and some of the more curious jobs of today!

BEAUTIFUL

A Celebration of Evolution

All of nature is beautiful. This stunning book shows how a variety of amazing creatures have evolved to look and behave the way they do.

- Stunning watercolour artwork by the phenomenally talented natural history artist William Spring.
- Large format with 100% foil cover treatments makes this the ideal gift book.
- A poignant message with significance for today's world.
- Includes 50 beautiful creatures to marvel at.
- The perfect book for fans of *Hidden Planet* by Ben Rothery and *The Golden Mole* by Katherine Rundell.

Aldabra Giant Tortoise

It was the tortoise from Aesop's famous fable The Hare and the Tortoise who gave us the phrase 'slow and steady wins the race'. It couldn't be true for this animal, especially when put into context. Tortoises have been gently plodding around the planet for 300 million years.

The genetic structure of the vine of the longleaf sand pine (*Pinus palustris* var. *palustris*) has been examined in a study by researchers from the University of Georgia. The study was published in the journal *Conservation Genetics*. The researchers found that the genetic structure of the vine of the longleaf sand pine is highly structured, with distinct genetic clusters. This structure is likely the result of historical isolation and fragmentation of the vine populations. The researchers also found that the genetic structure of the vine of the longleaf sand pine is highly correlated with the geographic structure of the vine populations. This correlation suggests that the genetic structure of the vine of the longleaf sand pine is a result of historical isolation and fragmentation of the vine populations.

Pygmy Seahorse

As its name suggests, the pygmy woodhoopoe is very tiny indeed, typically measuring just a centimetre or two in length.

The Barghanei puppy umbrae has evolved to be so wonderfully well camouflaged that it wasn't discovered until the late 1900s. It was only spotted when a scientist who was studying a piece of coral found the tiny animal clinging on to it. Today, there are now known species of puppy umbrae, some of which live in the Coral Triangle of Southeast Asia. In 2008, the *Myxoscorpia japonica* (also known as the Japan pig) was discovered on the coast of Japan. More recently, in 2020, *Myxoscorpia nana*, also known as the African puppy umbrae, was discovered in South Africa.

[illegible]

Sperm Whale

The whale has been the stuff of myth and legend for as long as humans have ventured across the world's oceans. Looking at the sperm whale, it's easy to see why.

The sperm whale is truly awe-inspiring. It is one of the largest toothed predators in the world, measures around 15 meters or more in length, and weighs around 40 tonnes more. Some have been recorded as being much larger, but these giant whales are very rare. The sperm whale has several unique adaptations that make it not just a whale species.

This articulation, which you may have referred to as *nasal*, allows the whale to produce sounds, such as clicks and whistles, that travel through the nose, under or against, and are reflected back to the whale. It then hears these reflected sounds and uses the information to locate the object the sound bounced off. Some animals use *echolocation* in the air rather than in water – bats, for example (see page 55). To produce its nasal sounds, the sperm whale has phonic lips in its throat. As air passes through the nasal passage and past the phonic lips, the surrounding tissue vibrates, producing the loudest sounds of any animal.

The sperm whale's incredible brain, which takes up almost a third of its body, is almost entirely devoted to vision. Within it, there is a huge organ containing an oily-based liquid suspension. This, along with other complex fluid-filled

There are hard-fleshed structures beneath a whale's skin called baleen-producing organs that act as comb-like structures that filter out the small organisms.

for the whole, when it came into contact with other animals. This strategy was famously shown in the real-life incident of the whaling ship *Essex*, which inspired Herman Melville's novel *Moby-Dick*.

In a long period of time, sparrows, a highly fecund species, were said to feed large. The harvesting of this ad led to the hunting of sparrows while in large numbers, causing many populations to become at risk since other wildlife hunting was stopped in the late 1980s. Unfortunately, some countries continue to engage in this practice. Whales are also threatened by climate change and pollution, as well as becoming entangled in commercial fishing nets.

Bat-Eared Fox

The name explains it all: a fox with ears like a bat. But why has this extraordinary animal developed such unusual features?

Living in small, tightly knit social groups, these foxes make their home on the savannahs of eastern and southern Africa. This is a dry and hot landscape where food is limited and danger is ever-present. The fox's large ears are an adaptation shared by many other inhabitants of these kinds of environments, such as the fennec fox, showing how evolution works to find the most efficient 'solution' to the problem of survival (bearing in mind that nothing is ever 'finished' in evolution – it's a constant work in progress).

In the case of a fox, its specialized ears serve several purposes. Firstly, they give it an astonishing sense of hearing. Not only does this allow the fox to detect predators and keep itself safe, but it also helps it to be a predator itself. It consumes a wide range of prey, including metals, spiders and millipedes, and occasionally even small reptiles and mammals – all of which are elusive, fast and, more often than not, actually hidden, at the very or sheltered underground. In such situations, the ability to hear your dinner before you see it makes it a lot easier to locate. Bat-eared foxes can hear even when walking slowly with their noses to the ground (their sense of smell is also extremely sensitive), their huge ears cocked forward, listening for the tiny scratch of an insect in its burrow. Once the fox has located its prey, it swiftly digs it up and can seize its target. Specialized teeth make it easy to crunch through the (often thick) carcase of its insect lunch.

The ears also serve another vital function, one that's particularly important if you live in a hot environment and you're covered in fur: heat regulation. Like those of the elephant (see page 48), the fox's ears serve as radiators. Because of the fine capillary veins close to the surface of its ears, the fox can remain at a comfortable temperature by venting excess heat from its blood into the air.

Apart from its large ears, the bat-eared fox also has more teeth than other species of fox (between 46 and 50 teeth in total). In fact, these unique creatures have more teeth than most mammals. Bat-eared fox has three upper and four lower molars on each side of the mouth, while other members of the canid (or dog) family have two upper and three lower molars. These extra teeth mean that the fox is perfectly adapted to chewing creepy crawlies.

Although occasionally hunted, the bat-eared fox is one of the increasingly rare examples of an animal with a safe conservation status. It is helpful in keeping down the number of termites, which are considered pests. This means that the biggest commercial value for humans comes from keeping these foxes alive. Most threats to this fox come from the dangers its food sources might face, such as flooding from damming or the use of insecticides.

[illegible][illegible][illegible]

Water was precious so rainwater was collected from the roofs of buildings, in tanks like this (above). As well as providing water for washing and cooking, the sides of the stone tank could be used to sharpen knives and swords.

A fort for a cohort of around 500 soldiers would have had six barrack blocks, each containing the living-space for a century of 80 men. Plans that have been discovered show that barrack blocks were long and narrow, with the living quarters for the centurion in command at one end. In some parts of the Empire, barracks for the troops had two storeys. The barracks had foundations of stone and the upper parts had a framework of wood, filled in with rubble and plastered over. The building would have been roofed in tiles, stone slates, or wooden shingles, depending on what materials were available locally.

they could be easily recognised by the men in a century.

Centurion's quarters

The centurion had a suite of rooms to himself, including a separate bedroom and living room. Parts of his quarters may have been used as offices or storerooms.

Auxiliary soldiers' quarters

An auxiliary soldier's uniform was not standard issue, but the first item put on over the undergarments was usually a wooden tunic.

Over the tunic, chain mail might have been worn to protect the upper arms and body. This could reach all the way to the knees and was heavy!

Wooden wheelbarrows carried on their best, thin poles, reinforced with iron studs. In cooler climates, soldiers wore chunky wooden clogs.

There were several different designs of helmet, but the normally preferred design went on the crests and the neck.

Crests had different patterns to different units and were oval or rectangular.
