Animal Homes: Ocean

Dive in and explore the ocean in this introduction to habitats for the very young.

- Using Natasha Durley's striking and recognisable animals from *Creature Features* and newly illustrated plants and environments, her colourful and engaging artwork will be enjoyed by a whole new age of reader.
- The first spread starts on the lowest layer of the ocean (the ocean trench) and each subsequent shaped spread introduces the next layer of the ocean (the abyss, the midnight zone, the twilight zone and the sunlight zone). Add a new layer with each page turn until the final spread reveals the full habitat. This tactile, die-cut board book format is a new way to explore and introduce animal habitats, making this series an essential addition to parents' and educators' STEM library.

Jane Foster's Baby's First Stories: 3-6 months

A series that grows with your baby

- Written in consultation with Early Years Expert, Lizzie Noble, each book perfectly suits your baby's needs at every stage of their first year
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books usually have little text. Reading aloud soothes babies from birth, promotes baby-carer bonding, builds children's language skills, and increases the chances that parents will continue to read to babies as they grow older
- Perfect for parents who use the Wonder Weeks App, read Your Baby Week by Week, or use milestone cards to mark big moments
- 4 books in the series, all featuring the same animal characters: 0-3 months; 3-6 months; 6-9 months; 9-12 months

Jane Foster's Baby's First Stories: 3-6 months

Jane Foster's Baby's First Stories: 6–9 months

A series that grows with your baby

- Written in consultation with Early Years Expert, Lizzie Noble
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books often have little text. Reading aloud soothes babies, promotes bonding, builds language skills, and increases the chance that parents will read to babies as they grow older. *6-9 months* has black, white, red and blue art, as from 6 months, babies can see most colours. The story relates to routines, to reflect little ones starting to wean, and settling into more regular patterns.
- Perfect for parents who use the Wonder Weeks App, read *Your Baby Week by Week*, or use milestone cards to mark big moments

Jane Foster's Baby's First Stories: 6-9 months

Bunny's Lunch Time

It's lunch time, Little Bunny,
Let's clean your paws and face.
Here's your spoon and here's your bib
And here's your bunny plate!

Jane Foster's Baby's First Stories: 9-12 months

A beautifully illustrated series that grows with your baby.

- Written in consultation with Early Years Expert, Lizzie Noble
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books often have little text. Reading aloud soothes babies, promotes bonding, builds language skills, and increases the chance that parents will read to babies as they grow older. *9-12 months* has black, white, red, blue and yellow art, as babies' eyesight becomes more like our own. The stories introduce questions and spotting elements for older babies who can notice small details and respond to basic questions.
- Perfect for parents who use the Wonder Weeks App, read *Your Baby Week by Week*, or use milestone cards to mark big moments

Bessie's Bees

An uplifting story about starting nursery with a courageous neurodiverse character at its centre.

- Bringing debut, neurodiverse author George Kirk to the Templar picture book list, allowing us to grow our range of underrepresented voices and experiences.
- While there has been an increase in positive representations and neurodiverse voices in middle-grade fiction, this is yet to be seen in the trade picture book market. Templar can be one of the first to champion neurodiverse voices and stories in this space.

The Circular Square

An uplifting rhyming story about becoming a well-rounded person.

- A quirky, philosophical rhyming picture book from the Waterstones Children's Book Prize shortlisted author, Simon Philip, offering him a new direction after the success of his *I Really Want to...* series.
- Bringing bold, graphic illustrator Neil Clark to the Templar list - a growing talent who is best known for his *CRASH, BANG, WALLOP* series with Ladybird.
- Includes back matter that encourages children to list the positives in their lives as well as lists of positives from the author and illustrator themselves.
- A meta picture book where artwork and characters engage with the layout, composition and size of the book - Square becomes the book in its square format!

Yetis Don't Exist!

A FUR-tastically funny rhyming adventure!

- Bringing rising talent, Kate Thompson, to the Templar list. She has two picture books with Welbeck and two new picture books coming with PRH in September 2024, and 2025.
- Bringing established quirky, commercial illustrator Loretta Schauer to the list with her bright palette and fantastic furry creatures. Loretta has previously worked with publishers like Ladybird, Farshore and Bloomsbury.
- Like *The Best Bear Tracker*, this book has a hilarious visual narrative alongside the text with the yetis and human explorer just missing each other more than once!
- The book's wintry, snowy setting offers the ideal seasonal gift without the story being explicitly Christmassy!
- Cover treatments: matt lam and foil.

Oh No, Flo!

A fantastically funny farmyard fiasco to read aloud!

- Taking recognisable and familiar farm animal characters to create a funny and fresh picture book for the very young.
- Featuring bold and bright illustrations from Mike Byrne, well-known for *This Book is Full of Unicorns*.
- Catherine Cawthorne is fresh to the picture book world but is already making her mark with: *We Went to Find a Woolly Mammoth* (Hachette, 2023) and *The Big Bad Wolf Investigates: Fairy Tales* (Bloomsbury, 2024).
- The light-hearted text and repeated 'OH NO, FLO!' refrain to join in with, makes it the perfect book to share with a group or individual child.
- Cover treatments: matt lam and SPUV.

A hilarious rhyming romp that perfectly encapsulates how being HANGRY really makes you feel!

- Bringing debut author Kathryn Wanless as well as established, commercial talent Fred Blunt to the Templar list with his wit and humour.
- Exploring a theme that isn't currently seen in the picture book market - there are plenty of books about being hungry OR angry, but not both!
- This story uses humour as a conversation starter for children to talk about the very real, intense emotions that come with hunger.
- The book acts as a reminder that we all get hangry, even grown-ups, but it's how we deal with those feelings that matters.
- Cover treatment: matt lam, SPUV and pantone.

The Bear and the Seed

An inspirational folktale about conservation and protection of the environment by Greenaway-shortlisted Poonam Mistry.

- Created by Greenaway-shortlisted and Carnegie-longlisted illustrator Poonam Mistry, nominated in 2024 for her other Templar book, *The Midnight Panther*
- Themes of conservation and protecting the environment, and a strong message that small actions that you can take will make a big difference.

My Name is a Gift

A heartfelt and touching celebration of the names we're given.

- Zeshan Akhter's debut picture book is filled with love and carries an important message - the perfect gift for any child.
- This lyrical ode to our names is brought to life by Åsa Gilland's expressive and detailed illustrations.
- Zeshan's second picture book with Templar, *Noah's New Home*, is due to publish in 2025.
- Includes a spread where the reader is asked about their name and has a chance to fill it in, making it the perfect activity for classroom and library settings.
- This story has roots in Muslim family traditions where dads gift their child a name, while also offering a universal message to all readers.
- Cover treatments: matt lam and foil.

Banana Hunt

A joyous read-aloud and laugh-out-loud rhyming romp!

- Bringing bestselling, brilliantly funny and rhyming-genius author, Suzy Senior, to the Templar list.
- This bubbly text is brought to life by Josh Cleland's vibrant illustrations that are packed with added humour and lots of fun critters to spot!
- A light-hearted rhyming text that reads fantastically out loud, with both a group or individual child.
- Includes a hidden pink banana to spot on every spread so the reader can be part of their own banana hunt!
- Cover treatments: matt lam, SPUV and emboss.

A Shelter for Sadness

A poignant and heartwarming picture book exploring the nature of sadness.

- Over 22,000 copies sold worldwide (as of July 2022)
- A poignant and heartwarming text addressing the hugely important and topical issue of sadness and depression
- Dealing with abstract emotions in an approachable and child-friendly way
- Anne Booth is known for the exceptional warmth and authenticity of her writing. She was inspired to write this book by the words of Etty Hillesum, a Holocaust victim.
- With superb illustrations from multi-award winning David Litchfield, who has sensitively visualized the nature of Sadness

A Shelter for Sadness

The shelter I will build for my Sadness will have light from the sun or from the moon and stars.

But the windows will have curtains that Sadness can draw when it wants to. And there will be candles or lamps if Sadness needs them.

I Want the Moon

A wealthy man has everything he could ever want on Earth... and now he is reaching for the moon.

- Frann Preston-Gannon is a multi-award winning illustrator and author. In 2011 she was the first UK recipient of the Sendak fellowship. Her first picture book, *The Journey Home*, won the 2012 Waterstones Prize, *I am the Seed that Grew the Tree* was the 2019 Waterstones Gift of the Year and *In the Swamp by the Light of the Moon* was Bank Street College of Education's 2020 Best Children's Book of the Year.
- *The Swamp in the Light of the Moon* has sold over 19,000 copies worldwide (as of July 2022)
- A captivating story with a message about the true value of things at its heart.

I Want the Moon

Many moons later
that small boy was grown.
He was now a tall man
and was very well known.
He was rich and important,
he lived like a king.

He had all that he wanted
except for one thing . . .

• THE NETTLE QUEEN •

Nos, the queen made a strong dark dye – in a great pot, walnut shells hiddled and brewed. She poured the dye into Eliza's bath. It stained her hair and changed her face – she looked so different, even her own father did not know her.

"Who let a stranger in here?" he cried. "Throw her out!"

Eliza fled, into the forest. She wandered the woods, wishing her brothers were with her. But the trees and the plants, the birds and the animals were all with her. She talked to them, as if they were her brothers.

"Hello, Butterfly!"

"Hello, Nettle, may I pick a leaf? Ow?"

The sting made the tips of her fingers tingle. Just then, along came a woman, gathering nettles for soup. She picked a dock leaf for Eliza, to soothe her skin. She showed her the tiny butterfly eggs, she'd reared beneath a nettle leaf. She taught her how to pick the very top tips of the plant, that are best to eat. Eliza thanked the woman, and she asked her, "Please... Have you seen six princes?"

The woman shook her head. "No... no princes... But I did see six swans, down on the river."

Eliza followed the river all the way to the sea. But she didn't find her brothers. She did find a white feather, on the shore. She sat on the sand with the feather in her hand. And as the sun began to set, there came a sound – over the ponding of the waves – the singing of wings.

From over the horizon came six wild swans. As they landed, their white feathers fell away. There stood six boys – Eliza's brothers! Then there was hugging and kissing and laughing and crying, and more hugging.

"Every day, when the sun rises, we turn into swans," said her youngest brother. "We only become boys again when the sun sets. We live far off over the ocean, but every day, we fly back, to look for you."

"Now you've found me," said Eliza. "Take me with you!" So Eliza and her brothers gathered supple willow and tough rush, and together they knatted a net.

Eliza sat in the net and her own brothers lifted her clean into the

Enchanted Tales

The Magic Fish

A tale from China

The Brothers Grimm version of "Cinderella" is the one many of us are familiar with, but there are hundreds – maybe even thousands – of different versions of this tale from around the globe. This version from China was the first to be written down, over 1,000 years ago.

Once upon a time, in a little shed outside a little house in the cave mountains of Southern China, there lived an orphan called Ye-Tsien. She was bright-eyed, clever, kind and good at making things. Ye-Tsien's stepmother loved her own daughter best, so Ye-Tsien had to do all the heaviest, most dangerous work, like collecting firewood from the deep forest or water from the high mountain pools. One day, Ye-Tsien was collecting water when up from the bottom of a deep mountain pool there was a shimmering and a glittering. It travelled up and up until something broke the surface – a tiny, shining golden fish! The fish looked up at Ye-Tsien, Ye-Tsien looked back – and from that moment, the fish

and Ye-Tsien became friends. She took it home, placed it in a basin and fed it every day with scraps from her own plate. The fish grew and grew until, one day, it had grown so big she had to take it back to the pool. Still, Ye-Tsien visited the golden fish every day, and each time the fish would poke its shining golden head out of the water and greet her.

A few weeks later, the Stepmother was hungry and had an idea. Secretly, she fished Ye-Tsien to the pool. She saw how the huge, sparkling, delicious-looking fish always came out for Ye-Tsien but stayed deep under the water when anyone else came by. *How can I outwit this clever fish?* she thought.

The next day, back at home, the Stepmother gave Ye-Tsien new clothes to put on and sent her on a long errand down the mountain. Then she disguised herself in Ye-Tsien's old clothes, went to the pool and called the fish. When it bubbled up from the bottom of the pool, the Stepmother was ready with a knife. She took the golden fish home, chopped it up, cooked it and served it up to eat with her favourite daughter.

'Delicious!' they both said, wiping their mouths. They ate every morsel and threw its bones away on the rubbish heap.

The following day, Ye-Tsien hurried to the mountain pool and called – but no fish came. Big tears fell from her eyes and splashed into the empty pool. But as she cried, the air thickened, shimmering and glittering, and a figure appeared. It spoke in a voice that reminded her of safety:

*Today you cry, today you weep,
But look upon the rubbish heap.
Your fish friend's magic bones are there.
They'll grant you wishes, never fear.*

Mythical Tales

PIRATES AND THE PRINCE

Once, there was a young prince who loved sailing on his father's ship. The ship was old and weathered, but it was his favorite place to go. One day, the prince was on the ship when a storm came. The ship was hit by a large wave and began to sink. The prince was thrown overboard and was in the water for a long time. He was rescued by a group of pirates who took him to their island. The pirates were surprised to see a young prince who was so brave and kind. They decided to help him and gave him a new ship to sail on.

- Over 100,000 Grahame Baker-Smith books sold worldwide
- Collectable package drawing on the market trend for Fox and the Star/Essex Serpent-style offerings
- Cover treatment: Debossing, foil and arlin

Alice's Adventures in Wonderland

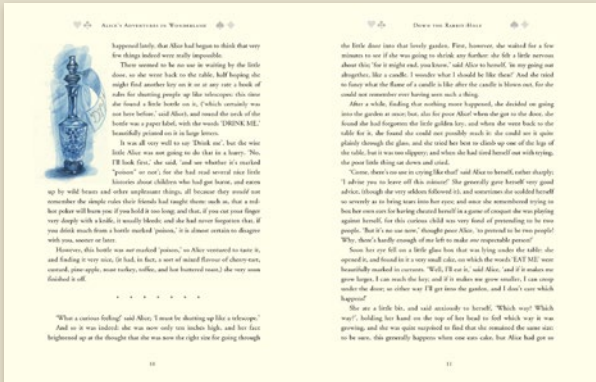

other question, it didn't matter which way she put it. She felt that she was doing off, and had just begun to dream that she was walking hand in hand with Dinah, and saying in her very natural way, 'Now, Dinah, tell me the truth! did you ever see a hat' when suddenly, thump! thump! down she came upon a heap of bricks and the leaves, and she fell upon her face, wondering how she came upon a hat, and she jumped up on to her feet in a moment, she looked up, but it was all dark overhead, before her was a smoking funnel, and the White Rabbit was off in sight, leaving down it. There was no a moment to be lost: away went Alice like the wind, and was just in time to see it say, as it moved a corner, 'Oh my eye and whiskers, how late I'm getting!' she was also behind it when she turned the corner, but the Rabbit was no longer to be seen: she found herself in a long, low hall, which was in sight of a room of hanging from the roof.

There were doors all round the hall, but they were all locked, and when Alice had been all the way down one side and up the other, trying every door, she walked sadly down the middle, wondering how she was ever to get out again.

Suddenly she came upon a little three-legged table, all made of solid glass, there was nothing on it except a tiny golden key, and Alice first thought it was that might belong to one of the doors of the hall, but, alas! either the locks were too large or the key was too small, for at any rate it would not open any of them. However, on the second door round she came upon a low window that had not locked before, and looked in, and there she found three little fishes: high the round the fish-garden by the back, and when she pushed it forward.

Alice opened the door and found that it led into a small passage, not much bigger than a cat-hole: she looked down and fancied, along the passage, into the leafless garden you ever see. How she longed to get out of that dark hall, and wander about among the beds of bright flowers and these cool fountains, but she could not even go her head through the doorway, 'and even if I could, it could go through,' thought poor Alice, 'it would be of very little use without my shoulders. Oh, how I wish I could shut up like a telescope! I don't think I could have been so high!' 'Yes, you are, in many wonderful ways,' thought she.

happened fairly, that Alice had begun to think that very few things indeed were really impossible.

There seemed to be no use in waiting by the little door, so she went back to the table, half hoping she might find another key on it, or at any rate a book of rules for showing people up like telescopes: this time she found a little bottle on it, 'I wish I could get that,' thought Alice, 'and then I could go into the garden as soon as I like, but how am I to get the bottle?' she was a paper label, with the words 'DRINK ME,' beautifully printed on it in large letters.

It was all very well to say 'Drink me,' but the white rabbit! Alice was now going to do it in a hurry, 'No, I'll look first,' she said, 'and see whether it's marked 'poison' or not!' for she had read several nice little histories about children who had got poison, and were up by wild beans and other unpleasant things, all because they could not remember the simple rules their friends had taught them: such as, that a red-hot pepper will burn you, if you hold it too long; and that, if you eat raw mushrooms very deeply with a knife, it usually bleeds; and she had never forgotten that, if you drink much more than a bottle marked 'poison,' it is almost certain to disagree with you, sooner or later.

However, this bottle was not marked 'poison,' so Alice ventured to taste it, and feeling it very nice, in half an hour she was a small flower of three years, round, plump, nose tickles, soft, and her hair turned red: she very soon finished it off.

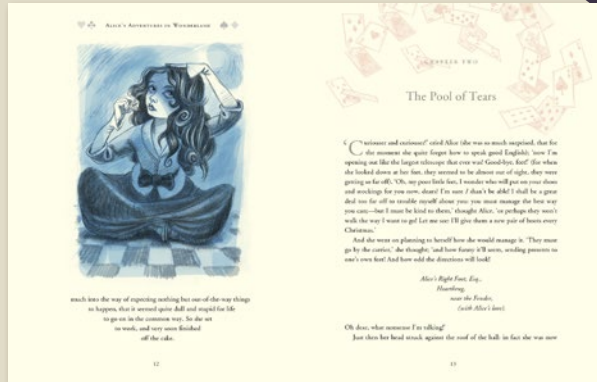

.....

'What a curious feeling!' said Alice: 'I must be shutting up like a telescope!' And so it was indeed, she was now only ten inches high, and her face looked upon it as though that she was now the right size for going through

the little door into that lovely garden. First, however, she waited for a few minutes to see if she was going to shrink any further: she felt a little nervous about this: 'for it might end, you know,' said Alice to herself, 'in my going out altogether, like a candle. I wonder what I should be like then?' And she tried to fancy what the flame of a candle is like after the candle is blown out, for she could see sometimes even having seen such a thing.

'After a while, finding that nothing more happened, she decided on going into the garden as soon as she could, but she found the door was now the side of it, she found she could not possibly reach it: she could see it quite plainly through the glass, and she tried her best to climb up one of the legs of the table, but it was no use; she slipped, and when she had tried her best at walking, she gave little things up the door and stood.

'Come, there's no use in crying like that!' said Alice to herself, rather sharply: 'I shall try to leave off this minute!' She generally goes herself very good advice, though the very advice followed it, and sometimes she scolded herself so severely as to bring tears into her eyes, and once she remembered crying to her her own face by having checked herself in a queue of moment she was fighting against herself, for this curious child was very fond of pretending to be two people. 'That's all as one size,' thought poor Alice, 'to pretend to be two people!' 'Why, then, it hardly enough of me left to make me respectable people!' 'Now her eye fell on a little glass box that was lying under the table: she opened it, and found in it a very small cake, on which the words 'EAT ME,' were beautifully marked in corners. 'Well, I'll eat it,' said Alice, 'and if it makes me grow bigger, I can reach the door, and if it makes me grow smaller, I can creep under the door; so either way I'll get into the garden, and I don't care which happens!' 'She ate a little bit, and said aloud to herself, 'Which way? Which way?' holding her hand on the top of her head to feel which way it was growing, and she was quite surprised to find that she remained the same size: so she ate, this generally happens when one eats cake, but Alice had got so

much into the way of expecting nothing but one of the ways things to happen that it seemed quite dull and stupid for her to go on in the common way. So she set to work, and very soon finished off the cake.

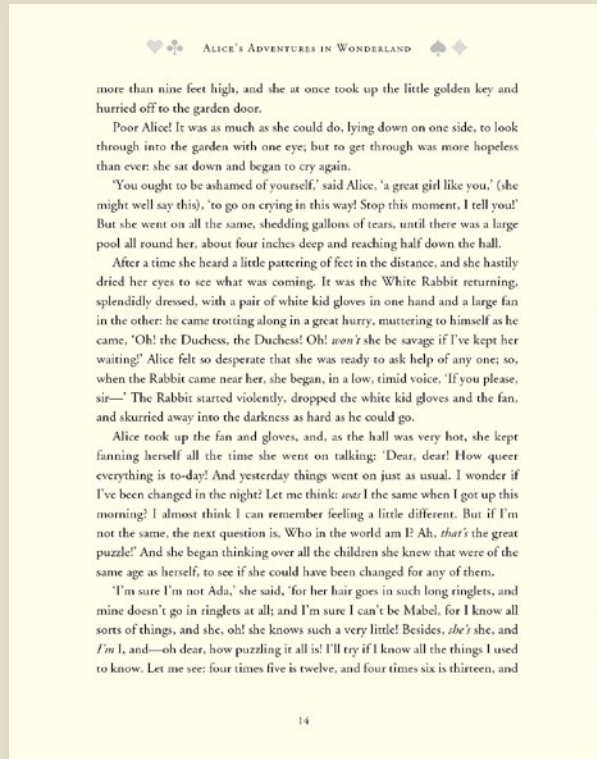

CHAPTER TWO
The Pool of Tears

'"Tis true, and 'tis true!" said Alice like was so much surprised, that for the moment she quite forgot how to speak good English: 'now I'm opening out like the largest telescope that ever was! Good-bye, dear!' that when she looked down at her feet, they seemed to be about an inch long: they were getting so the old, 'Oh, my poor little feet, I wonder who will get on now! down and weeping for you now, dear!' 'I'm sure I don't like it!' she'll be a great deal too fat all to enable myself about you: you must manage the best way you can—but I must be kind to them, thought Alice, 'or perhaps they won't with the way I want to get! Let me see—I'll give them a new pair of boots every Christmas!'

And she went on planning to herself how she would manage it: 'They must go by the carrier,' she thought, 'and how heavy I'll miss, sending presents to me! a new hat! And how the directions will lead!

Alice's Right Foot, Eng.
Handing
over the Parole:
Good-bye, dear!

Oh, dear, she sometimes is thinking!
She then has heard stuck against the end of the hall in fact she was now

more than nine feet high, and she at once took up the little golden key and hurried off to the garden door.

Poor Alice! It was as much as she could do, lying down on one side, to look through into the garden with one eye; but to get through was more hopeless than ever: she sat down and began to cry again.

'You ought to be ashamed of yourself,' said Alice, 'a great girl like you,' (she might well say this), 'to go on crying in this way! Stop this moment, I tell you!' But she went on all the same, shedding gallons of tears, until there was a large pool all round her, about four inches deep and reaching half down the hall.

After a time she heard a little pattering of feet in the distance, and she hastily dried her eyes to see what was coming. It was the White Rabbit returning, splendidly dressed, with a pair of white kid gloves in one hand and a large fan in the other: he came trotting along in a great hurry, muttering to himself as he came, 'Oh! the Duchess, the Duchess! Oh! won't she be savage if I've kept her waiting!' Alice felt so desperate that she was ready to ask help of any one; so, when the Rabbit came near her, she began, in a low, timid voice, 'If you please, sir—' The Rabbit started violently, dropped the white kid gloves and the fan, and skurried away into the darkness as hard as he could go.

Alice took up the fan and gloves, and, as the hall was very hot, she kept fanning herself all the time she went on talking: 'Dear, dear! How queer everything is to-day! And yesterday things went on just as usual. I wonder if I've been changed in the night? Let me think: *was* I the same when I got up this morning? I almost think I can remember feeling a little different. But if I'm not the same, the next question is, Who in the world am I? Ah, *that's* the great puzzle!' And she began thinking over all the children she knew that were of the same age as herself, to see if she could have been changed for any of them.

'I'm sure I'm not Ada,' she said, 'for her hair goes in such long ringlets, and mine doesn't go in ringlets at all; and I'm sure I can't be Mabel, for I know all sorts of things, and she, oh! she knows such a very little! Besides, *she's* she, and *I'm* I, and—oh dear, how puzzling it all is! I'll try if I know all the things I used to know. Let me see: four times five is twelve, and four times six is thirteen, and

Bedtime Book for Bump

A beautifully illustrated pregnancy keepsake with pages to personalise.

- Hardback keepsake book with an arlin and foil cover finish.
- Includes an introduction by Dr Kimberley Bennett (creator of “The Psychologist’s Child”), backed by research, on the importance of reading to baby in utero.
- The perfect gift for parents-to-be.
- Written in an inclusive manner, to encompass same-sex and single parents.
- Secure envelope affixed to the interior back cover to keep scan photos and other treasured memories.

Bedtime Book for Bump

Little One, this book's for you,

I'll read it loud and clear.

For though we
haven't met you yet,
I know that you can hear.

Your mother's beating heart
Makes up the music
of your day,

And when I sing,
you listen in:

You wriggle and you play.

 - d. Flod Leclerc
6. What was the winning song for the first Eurovision Song Contest?
 - a. 'No One Part (Don't Believe)
 - b. 'De Vogel Van Holland' (The Bird of Holland)
 - c. 'Refrain'
 - d. 'I'Est Lix (His, Them)
7. Which Italian music festival sparked the creation of the Eurovision Song Contest?
 - a. Lys Assia
 - b. Coryn Brokken
 - c. Freely Quinn
 - d. Flod Leclerc

1956 - 1959

8. In what language was the winning song of the first Eurovision Song Contest sung?
 - a. English
 - b. German
 - c. Dutch
 - d. French
9. Which of the following was not a voting rule in 1956?
 - a. Voting was done in secret
 - b. Jury members could vote for their own country
 - c. Jury members could allocate two votes to the same country
 - d. Performers were allowed to vote
10. How many songs did each country submit for the first Eurovision Song Contest?
 - a. Lys Assia
 - b. Coryn Brokken
 - c. Freely Quinn
 - d. Flod Leclerc
11. Who presented the first Eurovision Song Contest?
 - a. Luchino Fulvio
 - b. Arvid Igelsten
 - c. Hanneke Lips
 - d. Jacqueline Joubert
12. True or False: The first Eurovision Song Contest was only broadcast via radio.

1956 - 1959

13. Which country voted on behalf of Luxembourg in 1956?
 - a. Denmark
 - b. Switzerland
 - c. Italy
 - d. Sweden
14. Besides 'Refrain', what other song did Lys Assia sing in 1956?
 - a. They got into a fist fight
 - b. They flew the wrong flag
 - c. They took their clothes off
 - d. They kissed
15. Which country came second in 1956?
 - a. United Kingdom
 - b. Austria
 - c. Denmark
 - d. Luxembourg
16. What scandalous act did participants Birthe Wilke and Gustav Winckler perform onstage in 1957?
 - a. They got into a fist fight
 - b. They flew the wrong flag
 - c. They took their clothes off
 - d. They kissed
17. The 1957 contest saw the longest song in Eurovision history. What was the song?
 - a. 'Het Als Toen' (Just Like Then)
 - b. 'Conde Dalia Mia Chicara' (Strings of my Guitar)
 - c. 'Wahne, Kleines Pony' (Where, Little Pony?)
 - d. 'La Belle Amour' (The Beautiful Love)
18. How long was the longest song in Eurovision history?
 - a. 9 minutes and 9 seconds
 - b. 9 minutes and 5 seconds
 - c. 4 minutes and 39 seconds
 - d. 6 minutes and 12 seconds
19. Birthe Wilke and Gustav Winckler performed Eurovision's first duet. Which country were they representing?
 - a. Belgium
 - b. Denmark
 - c. Austria
 - d. France
20. Which country received the lowest score in 1957?
 - a. United Kingdom
 - b. Austria
 - c. Denmark
 - d. Luxembourg
21. Who presented the 1957 Eurovision Song Contest?
 - a. Katie Boyle
 - b. Arvid Igelsten
 - c. Hanneke Lips
 - d. Jacqueline Joubert

1956 - 1959

22. What was the maximum number of people allowed on stage per performance in 1957?
 - a. 10
 - b. 12
 - c. 14
 - d. 16
23. True or False: The 1956 winning country hosted the 1957 contest.
24. 1957 Danish performer Birthe Wilke first gained popularity by covering which popular song?
 - a. 'Que Sera Sera' (What Will Be, Will Be)
 - b. 'Wahne Kleines Pony'
 - c. 'Misty'
 - d. 'Paper Doll'
25. How many countries participated in the second Eurovision Song Contest, in 1957?
 - a. 10
 - b. 12
 - c. 14
 - d. 16
26. Which country won the 1957 contest?
 - a. Coryn Brokken
 - b. Margit Helander
 - c. Lys Assia
 - d. Davidi Dupré
27. Which artist won Eurovision in 1957?
 - a. Coryn Brokken
 - b. Margit Helander
 - c. Lys Assia
 - d. Davidi Dupré
28. What was the winning song in 1957?
 - a. 'La Belle Amour' (The Beautiful Love)
 - b. 'AIT'
 - c. 'Straddeurjer' (Street Tune)
 - d. 'Het Als Toen' (Just Like Then)
29. True or False: 1957 was the first year to feature a scoreboard.
30. How many songs were performed in English in 1957?
 - a. Teacher
 - b. Doctor
 - c. Lawyer
 - d. Mortician
31. In what language were most songs sung in 1957?
 - a. Teacher
 - b. Doctor
 - c. Lawyer
 - d. Mortician
32. 1957 entrant Coryn Brokken gave up performing in the 1970s. What profession did she take up instead?
 - a. Teacher
 - b. Doctor
 - c. Lawyer
 - d. Mortician

1956 - 1959

1956 - 1959

Tales from Beyond the Stars

An anthology of classic science fiction stories.

- Stories will be broken up with a series of 'theme' spreads, which will add a non-fiction element to the book. These spreads cover everything from the rise of the science fiction genre to how it has inspired real life inventions.
- There's a gap in the market for a striking, beautifully illustrated science fiction anthology.
- Evergreen publishing with strong backlist potential and global appeal.
- An opportunity to expand the Big Picture Press list into the adult gift market.
- Resurgence of interest in titles that offer readers 'escapism' on TikTok, including fantasy and science fiction

Tales from Beyond the Stars

starting towards Kensington Gardens, wondering at this strange, red-dusted walling. It was as if that mighty desert of houses had found a voice for its fear and solitude.

Drawn by the sound, I crossed the river at Waterloo Bridge, littered with corpses, and wandered on through the silent streets until I came out at last upon Regent's Park. And as I emerged from the top of Baker Street, I saw far away over the trees in the clearness at the sunset the hood of the Martian giant from which this howling proceeded. I was not terrified. I came upon him as if it were a matter of course. The tripod did not move. The Martian appeared to be standing and yelling, for no reason that I could discover.

Regents canal was choked with the red weed, and it had spread across the grasses and was growing amongst the trees, a spongy mass of dark-red vegetation. As I stood watching, the sound of "Ulla, ulla, ulla, ulla," ceased. Cut off. The silence came like a thunderclap.

A terror seized me. The dusky houses about me stood faint and tall and dim; the trees in the park were growing black. Night, the mother of fear and mystery, was coming down.

I fled. In front of me the road became pitch black as though it were covered in tar, and I saw a contorted shape lying across the pathway. I could not bring myself to go on. I turned down St. John's Wood Road and ran headlong from this unendurable stillness towards Kilburn. I hid from the night and the silence, until long after midnight, in a cabmen's shelter in Harrow Road.

Before the dawn my courage returned, and while the stars were still in the sky I turned once more towards Regent's Park. I had to know what had happened to the tripod.

As I drew nearer and the light grew, I saw that a multitude of black birds was circling and clustering about the hood. At that my heart gave a bound, and I began running along the road.

Art of Protest

Discover the power of words, images and much more in this analytical and thought-provoking look at protest art.

- Stunning artwork by contemporary artists around the world
- As told by TED talker, activist, lecturer and artist De Nichols
- De's *Mirror Casket* project was commended by legendary activist Angela Davis in Smithsonian Magazine.
- **WINNER OF THE BRITISH BOOK DESIGN & PRODUCTION AWARDS IN THE CHILDREN'S TRADE 9 TO 16 CATEGORY!**
- **WINNER OF THE 2023 BOLOGNA RAGAZZI AWARD!**
- Uncoated and fluoro pantone cover treatments with flaps.

Art of Protest

SYMBOLISM

Paper Cranes
In Japan, it is believed that someone who folds 1,000 origami cranes will be granted a wish. In 1945, two-year-old Sadako Sasaki was in the vicinity of the atomic bomb dropped on Hiroshima. She suffered long-term effects from that exposure, including developing leukaemia. Before she died at the age of 12, Sadako folded more than 1,000 cranes, and the paper crane went on to become a symbol of peace.

The Peace Sign
The peace sign was created by the British artist Gerald Holtom in 1958 as the logo for a campaign for nuclear disarmament in the UK. It has since become an iconic symbol of calls for peace.

Umbrellas
During protests for democracy in Hong Kong in 2014, activists used umbrellas as shields against tear gas and other aggressions by the police. The umbrellas came to symbolize the protests and gave the movement its name (read more on pages 52-53).

The Clenched Fist
The image of an upraised clenched fist is a powerful symbol of protest and resistance. Some of its first uses were by labour unions in the early 1900s, before it grew in popularity and became a symbol of many causes, including Black Power, the anti-apartheid movement and the feminist movement.

The Rainbow
The rainbow is the most iconic symbol of the LGBTQ+ movement. It represents diversity, acceptance and the spectrum of human sexualities and genders.

Vivienne Westwood: The Story Behind the Style

Visual history of the iconic designer.

- Written by Jessica Bumpus, fashion editor, formerly with *British Vogue*.
- Illustrated with full colour photographs showcasing the brand's history.
- Cover finishes: mat lam and foil
- Comp title The Little Book of Chanel has sold in excess of 61k copies TCM.

Vivienne Westwood: The Story Behind the Style

Derbyshire Days

Vivienne Isabel Swire was born on April 8 1941 to Gordon and Dora Swire at the Paragon Maternity Home, Glossop. The future fashion revolutionist had one sister, Olga Swire, born 1945, and one brother, Gordon Swire, born 1946. She grew up in the parish of Tintwistle, Derbyshire (which was formerly part of Cheshire until 1974), both during and after World War II, enjoying what has been recounted as a fairly idyllic childhood, living at the more secluded Millbrook Cottage and playing outside until late.

The young Swire clan were encouraged to be creative and make things more than they were encouraged to read. Vivienne knew from a young age that she was good at making things, notably models at school, and she especially enjoyed sewing classes. Her mother would often make their clothes, and worked as a weaver in a local cotton factory.

The young Vivienne – who remembers having a passion for art from an early age – attended Hollingworth and Tintwistle Primary Schools from 1946 to 1952, at which point she passed the scholarship exam for Glossop Grammar School. She continued to be good at art during her time at Glossop Grammar, and considered attending art school.

Among Westwood's most formative fashion memories are the make-do-and-mend philosophy that came to define

Britain in austerity, as well as the coronation of Queen Elizabeth II in 1953, when Vivienne was 12 years old. The influence of these two events can be seen throughout every era of her designs, and the make-do-and-mend philosophy is evident in the motto "Buy Less, Choose Well, Make it Last", which the brand still promotes to this day. She expertly blended the elements of customisation, tradition and artistry together to create her own unique brand, which is now contrasted by her husband Andrew: *Konshalee*.

LEFT: Vivienne Westwood wearing one of her own designs in 'Buy Less, Choose Well'.

Malcolm McLaren

Westwood met Malcolm McLaren in 1965. An art student and a friend of her younger brother, Gordon, he would go on to become her creative collaborator for almost the next 20 years. Malcolm is an entrepreneur with the punk movement as Vivienne, and their partnership is legendary. He was something of a maverick of marketing strategy and distinction, before such things became commonplace in contemporary fashion. The pair were in a relationship for a time but never seem to have married.

Malcolm was interested in politics and was fascinated by the French Situationists, a creative enclave of writers and artists who wished to eradicate capitalism through acts of everyday life. He was a driving force in bringing politics, provocations, society and culture into Westwood's world. She found him to be charismatic and knowledgeable, but also full of contradictions.

In 1967, they had a son, Joseph Ferdinand Cecil, who would go on to follow in his parents' footsteps and enter the world of fashion. He founded the very successful lingerie company, *Agent Provocateur*.

It was in the early 1970s that McLaren and Westwood began to build their empire. Malcolm, in this period, had left art school and Vivienne was about to quit teaching. The plan had been to sell vintage records together, and there was talk of setting up a stall. But a retail opportunity – via a new

friend – on King's Road was about to arise.

Tommy Roberts, of the legendary Mr Freedom fashion business, took over the lease of 438 King's Road in 1969. He and his business partner, the fashion entrepreneur Trevor Miller, were well-known for their eclectic and discerning fashion eye which appealed to the glitterati of the 1960s. It was under Miller's control the shop was renamed *Parisian Garage*; the spot was already well-known for fashion.

Vivienne and Malcolm, who were regular on King's Road, ended up leasing the back of 438 King's Road, before taking the whole thing over and rebranding it. It would be known over the coming years as *Let It Beak*, *The Fun To Live*, *The Young To Die* and *Sex and Sublimation*, all of which would encompass the raucous, confrontational and non-conformist nature of McLaren and Westwood. Eventually the shop would come to define the varied-but-defined styles we know as punk today.

LEFT: Malcolm McLaren, teenage son of Vivienne Westwood and Joseph Ferdinand Cecil.

A Revolutionary is Born

There are few British designers, or brands, that have made quite as much of an impact on the fashion landscape as Vivienne Westwood. A fashion designer of both cult and commercial success (which is a rare combination), she was a punk and a pioneer, a rebel and a provocateur, an activist and a change-maker.

Over the course of a career that spanned half a century, Dame Vivienne Westwood would become synonymous with the British punk scene. Punk is what immediately springs to mind for most when her name is mentioned, along with the King's Road, corsets, platforms, tarran, crinolines, pirate boots, sustainability and climate change awareness. The list goes on. Her shows and interviews have become legendary – she is famous for using fashion as a platform to speak out on the issues she cared most about.

There is no doubt that Westwood's affinity for fashion history has helped her designs stand out. They are often historically informed, yet never to the point that they look odd. Where something shouldn't work, it always did, thanks to Vivienne's ability to balance the old with the modern – she was a genius when it came to style mashups. And the original Vivienne Westwood aesthetic rooted in a DIY approach never fully went away. Her designs feel intrinsically British and perfectly eccentric.

Westwood was the original multi-hyphenate and, in many ways, light years ahead of her time. She has inspired generations of designers that came after her, whether established and successful or aspiring and eager. Fashion critics even noted whiffs of her spirit at the London Fashion Week collections of autumn/winter 2023, which took place in February 2023, after her death. It's no wonder that her name is up there with the likes of Yves Saint Laurent, Christian Lacroix and the late great Karl Lagerfeld.

Rolex: The Story Behind the Style

PROVIDER: Hans Wilsdorf, the founder of Rolex.
RIGHT: Representatives of watch firms in Geneva in 1908.

more wearable product would one day make the larger pocket watch obsolete. He set about trying to change the image of wristwatches.

A fundamental step was finding a manufacturer called Angler in the Swiss town of Besen that was making precision movements that could fit inside a wristwatch. Wilsdorf placed a large order, and soon Wilsdorf & Davis became one of the leading British wristwatch firms.

In a bid to establish his business as a brand rather than simply a dealer, Wilsdorf wanted to create a new name for the company: a catchy one that would look good on a dial and be easy to pronounce in many languages. He had experimented with many combinations of letters in search of this made-up name but failed to find anything that worked. Then, while riding through London's Cheapside on the upper

deck of a horse-drawn in 1908, it came to him. Or as he would later put it: "A gentle whisper: 'Rolex' in my ear."

Under this new name, Wilsdorf continued his quest to create reliable wristwatches with quality movements. In 1910, Rolex had a breakthrough when one of its products, powered by an Angler movement, became the first wristwatch in the world to receive the Swiss Certificate of Chronometric Precision – a mark of homological excellence. Four years later, another milestone would be achieved when the Kew Observatory in London awarded a Rolex wristwatch with a Class A precision certificate. This had previously only been given to marine chronometers used for navigation, and it further solidified the reputation of Rolex as a purveyor of precise timekeeping instruments.

In 1916, World War I broke out, and the following year the British government introduced a 33.3% customs duty as part of the war effort. By this time, Rolex's London office, which had a staff of 60 people, was exporting its watches all over the world and the tax change would make that difficult. As such, Wilsdorf made the decision to move the company to Geneva in Switzerland. It already had an office in La Chaux-de-Fonds, which it opened in 1917 for marketing purposes, but this move would remove it from the British watch industry altogether.

And, so, the legacy of Rolex's Swiss-made watches began, with the Swiss company Rolex S.A. registered in Geneva in 1920.

OPPOSITE TOP: A watchmaker operating in Rolex's movement factory in Geneva in 1942. TOP RIGHT: Rolex's first watch, the 'Patek' watch, circa 1880.

The Origins of the Oyster

With Rolex settled into its new home in Switzerland, the company continued to develop its watch offering with a focus on precision and durability, as well as building its brand. Though certainly catchy, the name Rolex had not become an overnight success. Tired of waiting for it to catch on, Hans Wilsdorf launched a major marketing campaign in 1925, pledging to invest at least £12,000 a year – nearly £1 million in today's money. He also increased the number of watches Rolex was producing with its own branding on the dial, as it has been producing both branded and unbranded watches up until that time.

A major leap forward for Rolex's brand was the launch of the Oyster in 1926. This new style of watch promised to be waterproof and dustproof thanks to a hermetically sealed case, proving its durability. It also made it an obvious choice for sporting activities, which would prove to be a rich source of marketing for Rolex in the years ahead.

The Oyster case had a patented system of screwing down the bezel, crown and winding crown against the middle case to seal the movement inside securely. The winding crown, which is made from 10 individual parts, was key in its action as a go-between between the sealed inner world of the case and its functional external elements.

The Oyster case would become the backbone of Rolex. Nearly every watch in its contemporary range features an Oyster case, and the name of all the models reference it. A Submariner is technically named an Oyster Perpetual Submariner and a GMT-Master II is an Oyster Perpetual GMT-Master II, and so on. The only exception is the 1908 dress watch, which does not have an oyster case.

Rolex's iconic fluted bezel is a showstopper in the early Oyster cases. Although these fluted bezels are decorative now, the ridges originally served a purpose to allow a special tool to screw the bezel securely to the mid case.

OPPOSITE: A 1959 Rolex Oyster Perpetual on a brown alligator strap. ABOVE: A close-up of a Rolex Oyster Perpetual case and bezel base.

The World's Most Famous Watch Brand

Rolex has become shorthand for luxury. There is no watch you can strap on to your wrist that will be recognised for the status symbol it is quicker than a Rolex. And for many, this is the appeal.

Yet there was a time when the name Rolex – a word completely made up by the brand's founder Hans Wilsdorf – was not famous. It would take hard work, boundary pushing and a lot of self-belief on the part of Wilsdorf, a German orphan, to jettison the name into the upper echelons of horology; starting with convincing the pocket watch-wearing gentleman of the early 20th century that they wanted to wear the time on their wrist at all.

As you will discover, Rolex won its place in history by constantly questioning what was possible and innovating at all costs. It pioneered so many elements of watchmaking and design that are standard today, such as waterproof watches, placing a date window on the dial, and even removing the need to wind our watches.

It also found its way into some of the most exciting moments in history by placing Rolex watches on the wrists of adventurers and explorers. Its watches have travelled to the world's highest peaks and to the depths of the ocean; they have survived extremes of temperature, speed and pressure.

The story of Rolex is so much more than that of its watches. It is one of epic ambition and vision. What started out as a one-man band in London's Hatton Garden would become the epicentre of the Swiss watchmaking industry, and one of the most recognisable and coveted brands in the world.

Gorgeous canines of every shape, size and colour bound through this book - all 101 of them!

- The perfect gift for dog lovers big and small
- Beautiful cover treatments including foil and ribbon
- Humorous and engaging text written by dog expert Nicola Jane Swinney

Basenji

In the native Africa, the Basenji is known as 'the dog that doesn't bark'. While many dogs are often said to be 'sage to please', that just doesn't apply to this one. It is lively, imaginative and playful, but it does have a children's streak. The Basenji will usually learn what you want to teach it, but whether it will obey your commands depends entirely on its mood. That impertinent mind can be a problem, too, as anything you have lying around is likely to be investigated by your Basenji – usually by means of chewing. All that said, the Basenji makes a lovely pet as it adores people and playtime.

Life Expectancy 12-15 years | Height 40-45cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

Tibetan Mastiff

If you look like a giant teddy bear but this mighty mastiff is not the dog for everyone. While it has a gentle and loving nature, its sheer size can be a bit off-putting, and it is strong-willed. The Tibetan Mastiff sees itself as an equal, rather than a pet, and can be very stubborn. It is thought these amazing dogs lived in Tibet thousands of years ago and were used as guards (not many people would stand up to a 60kg dog) for monks, known as 'lamas'. This is where they developed their thick coat to cope with the harsh climate.

Life Expectancy 10-14 years | Height 60-70cm | Trainability Good for children | Grooming Needs brushing but doesn't shed much | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I can get up there!

Shiba Inu

The resident of its dog breeds native to Japan, the Shiba Inu greets the world with quiet dignity. But it's like a little single warrior, moving quickly and nimbly. The Japanese have three words to describe this breed, *harae* (upright backbone), *oyasoi* (good nature) and *shibui* (elegant). It also tends to be possessive – like a nosey toddler, the Shiba Inu doesn't like to share and if it could spare, it's first word would be 'mine'. It's also a natural hunter, so if you let it off the lead while out on a walk, it will probably disappear in the direction of the nearest squirrel.

Life Expectancy 12-15 years | Height 40-45cm | Trainability It has a stubborn streak | Grooming Very little | Exercise Needs a good daily workout | Most likely to say I'll be on your side | Least likely to say I'll be on your side | Least likely to say I'll be on your side

Parash Hound

This elegant hound was developed to hunt gazelle with pharaohs in ancient Egypt, more than 4,000 years ago. Despite its noble past, the Parash loves people and simply loves life. It's a natural clown – you can even teach a Parash to 'roll' and it's possibly the only breed that can blink – when it's happy or excited, its nose and ears will turn a deeper shade of pink. But as a hunting hound, it has a strong prey drive and is likely to chase anything it sees, so keep it on the lead at all times.

Life Expectancy 12-15 years | Height 50-60cm | Trainability Easy | Grooming Very little | Exercise Needs a lot of exercise | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Saluki

Praised by the travelling people of the Middle East, this ancient breed is thought to take its name from the Arabian city of Sals. To the Greeks, it was a noble dog indeed and they kept precise records of breeding and hunting prowess. They hunted hare, fox and gazelle from horseback, so their heads had to be fast of foot. There were once two different types of Saluki – short and mountain – but the two have merged into the modern breed. It has, however, retained its beauty and some of its speed, so be prepared to do a lot of jogging...

Life Expectancy 12-15 years | Height 60-70cm | Trainability Intelligent | Grooming Weekly brushing | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Alaskan Malamute

This impressive breed is one of the oldest in the world and has changed very little, still resembling its wolf ancestors. It was used by the Mahomet people to pull sleds and hunt seals. It is a strong and imposing animal, but it isn't much use as a watchdog – Malamutes regard everyone they meet as friends. They rarely bark, but make a charming 'woo-woo' noise. They're intelligent too, which means they can easily get bored... and a bored Malamute is trouble in waiting. They love to dig holes in the garden, or sniff across the kitchen counters for something tasty, so keep them busy!

Life Expectancy 10-14 years | Height 60-70cm | Trainability They can be quite stubborn | Grooming Needs brushing | Exercise Lots | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Tibetan Spaniel

This little dog likes to climb! Almost cat-like, it will try to find the highest perch from which it can watch over everyone and everything. Resembling a small lion (a powerful symbol in Tibet), it was highly prized as a watchdog. This watchful quality has been bred into the Tibetan Spaniel for thousands of years and it takes its role very seriously – don't even think about farting and blaming it on someone else in its presence! But don't expect your dog to be happy on its own. Tibetan Spaniels like company and get bored quickly – left to themselves they are likely to bark.

Life Expectancy 12-15 years | Height 25cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

Afghan Hound

With its slender, exotic face, long silky hair and lithe body, the Afghan Hound is surely the supermodel of the dog world. And as well as being one of the most beautiful breeds in the world, the Afghan is possibly the oldest. It comes from Afghanistan, where it was known as the Tazi, and was used to hunt dangerous animals, such as leopards. It was not only brave, but also extremely fast, capable of running at speed for many kilometres. Its independent nature means it does like attention, but on its own terms.

Life Expectancy 10-12 years | Height 60-66cm | Trainability This independent mind can be challenging | Grooming Lots of brushing | Exercise It needs plenty of room to move | Most likely to say Look how beautiful I am! | Least likely to say Give me a cuddle

Ancient Love Stories

A striking collection of love stories from ancient history.

- Final contents - Sappho (ancient Greek), Nebuchadnezzar II and Amytis (Babylonian), The Sacred Band of Thebes (ancient Greek), Sima Xiangru and Zhuo Wenjun (Chinese), Mark Antony and Cleopatra (ancient Rome), The Lovers of Pompeii (ancient Rome), Hadrian and Antinous (ancient Rome), Eloise and Abelard (French), Frances Howard and Robert Carr (English), Shah Jahan and Mumtaz Mahal (Indian), The Sanchos (USA)
- Written by award-winning classicist and author, Emily Hauser.
- Featuring a range of true stories from around the world, discover the astonishing lengths humankind have gone to in the name of love.
- A list of Sander's publishers: US - Penguin Random House; Germany - Knesebeck Von Dem GmbH

Ancient Love Stories

THE SACRED BAND OF THEBES

This was the final meeting place of the Sacred Band of Thebes, one of the most remarkable and most loyal armies that had ever lived. A bold experiment in an open town square by attacking war and heroes alike, who had died fighting for the freedom of the Greeks. An army, not just of soldiers, but of a hundred and fifty noble boys.

Born together by love loyalty to each other, the crack team of warriors was founded in Thebes in 378 BC by an extraordinary visionary by the name of Pammenes. It began as a resistance corps against the looming military power of Sparta (recovered the world over for its legendary military prowess across the continent to the south. These were chivalry, aristocratic, open, splashing blood across the pages of history, and well suited to the birth of a new kind of army.

HERODIAS AND ANTHOCHUS

These parts first crossed across years earlier, when Herodias - ruler of the Roman world and self-proclaimed prince of peace - took a summer jaunt across the Roman province of Bithynia, in northern Turkey, where Antiochus had his home. The emperor, busy with his job, probably did not spot Antiochus among the crowd of adoring subjects and eager petitioners. But one of his maids did - and, as usual, with an eye to the emperor's taste, spent a night in the maids' quarters, the kitchen-baked young man. Antiochus was duly offered a dinner invitation to the palace imperial suite along with a tuition package to the emperor's personal academy in Rome. To his boy from a dusty village on the fringe of the Roman empire, this must have seemed an offer too good to be true - a one-way ticket to live among the stars. But, in any good student of mythology would have known, by invitation to dinner and you might get burned.

Antiochus' rise to the top was meteoric even by Roman standards, where there were plenty of holy emperors who made it to the big time. Set among the other staff of the imperial household, Antiochus - handsome, good-looking, smart, with a magnetic personality and a nose for the emperor's favored boys - quickly caught the emperor's eye. Herodias was instantly besotted, and Antiochus became his pet. In the summer of 128 BC, at the age of seventeen, Antiochus was personally selected to accompany Herodias on a tour of Greece (Herodias was a notorious Greek sympathizer, then said - Asia Minor and, finally, Egypt.

It was clear to everyone that Herodias was willing to let Antiochus out of his sight - and together, they took part in many extraordinary experiences on their around-the-world trip. A night-long dip into mystical waters at the Thracian Mountain of Ganga. A bath house built in the highlands of Asia Minor. A quest - about the southern end of Herodias' much-loved Greek mythology books - to ride down a mountain lion that had been terrorizing the people of Licia. On all these adventures, the new obsession with each other grew steadily.

SHAH JAHAN AND MUMTAZ MAHAL

The story of Shah Jahan and Mumtaz Mahal is one of the most beautiful love stories of all time. A tale of passion, devotion, tragedy and ultimate sacrifice, their love story is a testament to the power of love. Mumtaz Mahal, the great favorite of Shah Jahan, was a woman of great beauty and intelligence. She was the daughter of a nobleman and a woman of great beauty and intelligence. She was the daughter of a nobleman and a woman of great beauty and intelligence.

It all started when Shah Jahan, one of the great Mughal Emperors, fell in love with Mumtaz Mahal, the most beautiful woman in the world. They were married in 1629, and their love was a source of inspiration for many. Her son and daughter of the noble family were named after her. Her son and daughter of the noble family were named after her. Her son and daughter of the noble family were named after her.

At the time, the Mughal empire was down to its last days. The Shah Jahan was the last Mughal emperor. He was the last Mughal emperor. He was the last Mughal emperor. He was the last Mughal emperor. He was the last Mughal emperor.

MARK ANTONY AND CLEOPATRA

wafled by attendants dressed as cupids and sea-nymphs: Cleopatra, Ruler of Egypt. Goddess of the Nile. Queen of one of the wealthiest countries in the world. Beautiful, certainly, at just twenty eight, but more than anything, utterly, alluringly certain of her star-quality charisma. As one writer put it, "her sex appeal, together with her powers of persuasion and her ability to charm all around her, made her simply, irresistibly desirable." This was who had come to call on Mark Antony, one of the most powerful men in Rome (and so, at that time, the world). Antony was a soldier, a devotee of the wine-god Dionysus, a playboy extraordinaire - a man, in other words, who lived life in vivid technicolour.

If anyone was going to make Rome's fun-loving general pay attention, it was going to be the young queen sailing towards him dressed in gold.

But there was more to this than just sex appeal. For Antony, vying to hold onto his position of power amidst the remains of the crumbling Roman Republic, Cleopatra meant Egypt, and Egypt meant two things: grain and gold. Both were essential to fund (and feed) his battle for world domination. For Cleopatra, Antony meant Rome's backing for her precarious hold on power back home, following a decade of civil war, during which the young queen had gone into exile and returned with an army to take the throne from her brother. No meeting could be more important for either of them. It was a moment well worth a bit of theatre, not to mention a spot of role play.

Welcome to the Museum: A Christmas Pop-Up Advent Calendar

The perfect gift, spread joy this Christmas with this decadent pop-up advent calendar, part of the bestselling Welcome to the Museum family.

- Published in conjunction with the Royal Botanic Gardens Kew
- High quality and made from sturdy material, the re-usable decorations and beautiful tree will take pride of place on any Christmas table, year after year.
- Beautiful artwork by textile designer, Emily Carter
- Luxury finishes including 100% foil cover, and interior box.

Welcome to the Museum: A Christmas Pop-Up Advent Calendar

MAMMALS

Reindeer

It is no coincidence that Father Christmas chose reindeer to pull his sleigh, as they are strong, hardy and capable of travelling more than 1,000km a year. As one of the earliest domesticated animals, reindeer share an ancient alliance with humans. These antlered deer thrive in colder climates of Europe, North America and Asia, residing in the frozen northern forests and the Arctic tundra. Covered in fur from head to hoof, reindeer use their useful dew claws to grip onto slippery surfaces and burrow through the snow, feasting on the ferns, fungi and lichen hidden below.

Unlike their magical counterparts, these animals do not need a glowing red nose to illuminate the way. As one of the few large mammals that can see ultraviolet light, reindeer are able to find food, locate predators and stay safe even in the dark, bleak winter when sunlight is scarce.

Key to plate

1: **White spruce**
This evergreen conifer is the most common species of North America. However, recent studies suggest the tree is originating further north, towards the Arctic Circle. It is possible that working temperatures caused by climate change have allowed them to grow here, in an area where the soil would normally be too shallow.

2: **Reindeer**
Bright reindeer

4

BIRDS

European Robin

With its rust-coloured plumage and curious expression, the European robin is a plump, small-billed bird that breeds throughout Europe, Western Asia and parts of North Africa. A much-loved sight, the robin can be spotted all year round, the welcome sound of its melodic warbling filling the frosty air even during winter. As natural ground feeders, robins can be found hopping around gardens, woodlands and parks, foraging for insects and worms.

Despite being only 14cm long, these tiny birds are fiercely territorial, puffing up their scarlet chests and fighting off any feathered intruders that invade their patch. Robins are considered modern Yuletide mascots. They first appeared on Victorian Christmas cards as an ode to the vermilion-coloured uniform of the postmen who delivered them. These postal workers were aptly nicknamed 'redbreasts'.

Key to plate

1: **European robin**
Eurostoeuridae rubecula

2: **Common holly**
Ilex aquifolium

The UK's most festive plant and for hundreds of years it has been used, along with ivy, to decorate homes at Christmas time. Today this prickly plant, with its water-resistant waxy leaves and bright red berries, makes the ideal festive wreath.

8

FRUITS AND SPICES

Festive Flavours

As Christmas draws near, festive flavours walk through kitchens across the globe, filling the air with traditional aromas of nutmeg, ginger and clove. In Europe, roasted sweet chestnuts make a tasty Christmas treat, harvested from the *Castanea sativa* tree with its prickly husks and grooved bark. The ginger orange is another popular festive food, gifted to well-loved children or peppered with cloves to make a pomander ball. This practice dates back to medieval times, when such spice-studded pomander balls perfumed the frosty air to ward off bad spirits and winter illnesses.

The iconic Christmas pudding also has humble origins, dating back to a porridge-like prune dish served in the 14th century. Although it originally formed part of a British tradition, the Christmas pudding is a global festive phenomenon, enjoyed by families far and wide in countries like South Africa, Australia and Canada. This dessert is often seasoned with cinnamon, a warm, fragrant spice derived from the inner bark of the Ceylon tree of Sri Lanka.

Key to plate

1: **Christmas pudding**
Filled with the quintessential flavours of the festive season, Christmas puddings are packed with dried fruits, nuts, cloves and spices, and bound together with a moist, sticky batter. It has been a staple of British homes for centuries.

2: **Orange**
Clinging to the branches of the Christmas tree, the orange is a fruit that has been a staple of British homes for centuries. It is a source of vitamin C and is often used in festive drinks, such as mulled wine, to make them taste warm and sunny.

3: **Star anise**
Star anise is the same plant as the fennel, but with a five-pointed star shape. It is a source of anise flavour and is often used in festive drinks, such as mulled wine, to make them taste warm and sunny.

Welcome to the Arts: Dance

TIMES BEST CHILDREN'S BOOKS OF 2023!

- The first title in the new dazzling new Welcome to the Arts series.
- The perfect gift for anyone who is a fan of *Strictly Come Dancing* or *Dancing With the Stars*
- Phenomenal immersive artwork by multi award-winning artist, Jason Raish
- Expertly written, lively text by Sadler's Wells CEO, Sir Alistair Spalding
- Published in conjunction with Sadler's Wells Theatre - one of the world's leading dance organisations
- Beautiful large format artwork makes the reader feel they are really there

Welcome to the Arts: Dance

"Dancers are the messengers of the gods."

Martha Graham

Born in 1894 in Pennsylvania, Martha Graham showed an early interest in dance, but her parents did not approve of her becoming a dancer. It was only after her father's death in 1914 that Graham, then aged 20, was able to pursue her dream and enrolled at the Denishawn school in Los Angeles. The eventual pioneer and creator of modern dance, Graham allowed and encouraged women to be at the forefront of artistic achievement.

Graham created a dance technique that allowed the performers to become aware of, and use, their gravity as opposed to ballet where the emphasis was on the dancers appearing weightless. Graham also worked on the principle of 'contracting and release', in her choreography movement comes from the tension of pulling in, or 'contracting', the pelvic muscles and curving the spine. The flow of energy is then 'released' from the body when it straightens. When repeated, this gives a rhythmic flow to the movement, a cycle similar to breathing in and out, but with more exaggerated movements. It was used in many of Graham's greatest choreographies, including the solo dance Lamentation and larger group works such as Chronicle (1926). It is still practised as a daily class in many dance companies and schools today.

The main themes of Graham's work include Greek mythology and American history. While her early works featured only female dancers, men joined Graham's company in 1938, prompting her to explore new themes. For example, the staged work Appalachian Spring (1944) explores the experiences of early American pioneers, but also the act of falling in love.

By presenting ideas and images that were unfamiliar, Graham introduced a new era in dance. She collaborated with composers such as Louis Horst and the fashion designers Calvin Klein and Donna Karan. She taught actors including Liza Minnelli and Gregory Peck and inspired future dance greats such as Merce Cunningham (see page 39) and Taylor Swift.

NOW SHOWING

Martha Graham stars in Lamentation, premiered 8 January 1930 at Maxine Elliott's Theatre, New York City | Choreographed by Martha Graham | Music by Zoltan Kodaly

Lamentation, sometimes referred to as the Dance of Sorrow, is a four-minute solo piece first performed by Graham herself. The costume was deliberately designed to restrict her movements and to enhance the accession of grief, but also to highlight its foundation.

Arboretum Mini Gift

TEMPERATE CONIFER FORESTS

Boreal Conifers

One of the most ancient tree species, conifers are synonymous with boreal forests. Densely packed green firs spruce and pines all tower high above the dark, damp ground below, while in autumn, the larch brightens up the scene with a warm golden glow.

'Conifer' basically means 'cone-bearing' and, instead of flowers, these trees produce seeds in cones. Conifers are evergreen which means they start producing food as soon as they wake up after the winter and don't have to wait for new needles to grow. The larch is the odd one out being a deciduous conifer: it loses its needles each year. However larches have delicate needles compared to evergreen conifers, so they are quicker and easier to grow.

Although their growth is slow, conifers have adapted to be able to cope with the harsh weather. Their recognisable narrow, conical-shaped canopies are made up of flexible branches that sweep downwards. This design helps to shed heavy snowfall and reduce the potential damage to the branches from snow and strong winds.

Key to plate

1. Balsam fir <i>Abies balsamea</i> Height: 20m Seed cones and leaves	2. American larch <i>Larix laricina</i> Height: 20m Seed cones on branch
3. Black spruce <i>Picea mariana</i> Height: 10m a) seed b) seed cones and leaves	4. Lodgepole pine <i>Pinus contorta</i> Height: 20m a) female cone cones on branch b) male cone c) mature seed cone

12 13

TEMPERATE CONIFER FORESTS

Redwoods

The majestic redwoods are record-breaking conifers and include some of the largest and tallest trees on Earth. One impressive coast redwood called 'Hyperion' has reached the dizzying height of just over 115m. The oldest specimen on record is estimated to be 3500 years old.

The dawn redwood grows in China, while the giant and coast redwoods grow in North America. The North American species are never found together: the coast redwoods grow in the fog belts of the Pacific coastline and the giant redwoods in open groves further inland, on the western slopes of the Sierra Nevada mountains. Both trees have extremely wide trunks, defined by springs, compressed bark growing up to 60cm thick, and their evergreen branches start high up the trunk, which protects them from forest fires.

Unlike the two North American redwoods, the Chinese dawn redwood is a deciduous conifer with flat, leathery needle-like leaves and reddish-brown, fibrous bark. Incredibly, it was first discovered in 1941 as a 150-million-year-old fossil tree dating from the Mesozoic Era. A few years later a living specimen was found in Central China. Seeds were collected and distributed to arboreta around the world, where they grow today.

Key to plate

1. Coast redwood <i>Sequoia sempervirens</i> Height: 115m a) tree b) cones c) mature female seed cone	2. Giant redwood <i>Sequoiadendron giganteum</i> Height: 115m a) tree b) leaves and female cones c) seed d) cross section of trunk
3. Dawn redwood <i>Metasequoia glyptostrobilus</i> Height: 50m a) leaves b) mature seed cone	

14 15 16

TEMPERATE BROADLEAF FORESTS

Habitat: Temperate Broadleaf Forest

Temperate deciduous forests make up some of the world's most dramatic biomes. These forests produce dairy foods at the start of the growing season, transforming to lush greens, then bursting into blazing reds, oranges, yellows and browns before their leaves drop, leaving bare, skeletal structures to face the cold months ahead.

These magnificent forests occur mainly in the mid-latitude parts of the globe, encompassing parts of the United States, Canada, Europe, China, Korea, Japan and Russia and South America. All of these regions have four seasons, with no season getting too hot or too cold.

Remarkably, all these forests share similar genera of tree species, which include oaks, maples, beeches and ashes, but also have their own native species in each region. Beneath these forest giants, smaller shade-tolerant species such as dogwoods and sourwoods fill the understory and shrub layer, mingling with ferns and mosses to create perfect hidden habitats for birds and small mammals. The forest floor itself is full of insects and fungi, who enjoy the rich, fertile soil created by falling leaves and woodchips.

Key to plate

North American broadleaf forest	1. Pine <i>Pinus strobus</i> Height: 40m	3. Olive stone <i>Malus domestica</i> Height: 5m
2. Red oak <i>Quercus rubra</i> Height: 40m	4. Flowering dogwood <i>Cornus florida</i> Height: 10m	5. White sassafras <i>Sassafras albidum</i> Height: 20m

17 18

TEMPERATE CONIFER FORESTS

Boreal Broadleaves

Although boreal forests, or 'taiga', are dominated by conifers, there is also a very small but hardy selection of broadleaved trees present, including poplars, willows and birches.

While generally short-lived species, rarely reaching 100 years, these trees have many characteristics that help them survive in the taiga. They can all grow, flower and fruit during the short summer, and then shed their leaves at just the right moment to prepare for the long winter. Their compact leaves have a small surface area, which means they can be produced quickly – ideally suited for a forest with a short growing season – and they are also able to withstand strong winds.

The broadleaved trees grow near water, making the most not only of the available moisture there, but also the light levels around lakes and rivers where there is no competition from the dense-leaved conifers. In the northern tundra, these trees are short and stunted but further south, towards the temperate broadleaved forest, they have straighter trunks and grow taller.

Key to plate

1. Speckled alder <i>Alnus incana</i> subsp. <i>rugosa</i> Height: 22m a) branch b) flower	4. Balsam poplar <i>Populus balsamifera</i> Height: 30m Flower
2. Large-toothed aspen <i>Populus grandidentata</i> Height: 25m Leaf	5. White birch <i>Betula papyrifera</i> Height: 20m a) trunk/bark b) male flower c) leaf
3. American mountain ash <i>Sorbus americana</i> Height: 12m Leaves	6. Moosewood <i>Acer pensylvanicum</i> Height: 10m a) leaf b) twig and buds c) trunk/bark

Arboretum Postcards

A box set of 50 beautiful postcards from the bestselling *Arboretum*, part of the *Welcome to the Museum* series.

- 50 full-colour postcards, featuring trees from all around the world.
- The ideal gift - beautifully presented in a box including pantone, ribbon and foil.
- *Arboretum* is the third title to publish with the Royal Botanic Gardens, Kew
- The core *Welcome to the Museum* books have sold a combined quantity of over 1 million copies in 48 languages (as of July 2022)

Animalium (Junior Edition)

With text especially written for younger children, more readers than ever can discover the wonders of the animal kingdom in the *Animalium Junior*, the new edition of the international bestseller.

- Abridged format makes this the perfect alternative to the large-format book, and offers an alternative price point for consumers.
- Phenomenal vintage-inspired artwork by award-winning artist Katie Scott
- Cover finish: matt lam and 100% foil

Animalium (Junior Edition)

INVERTEBRATES

Invertebrates

Invertebrates are grouped together not because they have things in common, but because they all lack one important feature: a jointed back. Making up around 97 per cent of the animal kingdom, invertebrates vary widely from the simple sponge to the intelligent octopus. They are split into related groups (such as Rotifers, segmented worms and molluscs) and can be found almost everywhere on Earth: in water or on the sea bed and even underground.

Most species of invertebrate appeared around 540 million years ago, making them Earth's first animals. Sponges evolved from single-cell creatures to become the very first animals. They can't move or think so it's easy to mistake them for plants, but they feed on bacteria and can sense and react to their underwater environment.

Next came the colonialists, a wide-ranging group. Some, such as sea anemones, attach themselves to rocks, while most types of jellyfish can move freely through the water. While molluscs kill and eat animals to survive, they are 'passive predators' which means they wait patiently for their prey and then sting them to death!

Key to plate

1 Black sea nettle Diameter: 10cm	4 Dotted nemertea Diameter: 10cm	7 Banded planula Diameter: 10cm
2 Yellow-eyed planula Diameter: 3cm	5 Black back planula Diameter: 3cm	8
3 Purple sea nettle Diameter: 10cm	6 Black coral Diameter: 10cm	
	9 Rosemary coral Diameter: 10cm	

INVERTEBRATES

Squids and Octopuses

The cephalopod family – which includes squids and octopuses – dominated the seas several million years before fish existed. Around 800 species of cephalopod can now be found in every ocean on Earth.

Their large brains and impressive senses make them suitable creatures able to communicate with one another. They have suction-like tentacles and move by taking in water and then shooting it out to move forward by jet propulsion.

Cephalopods can change the colour and pattern of their bodies to camouflage themselves and scare off predators. They also produce ink and, when threatened, they release an ink cloud which confuses predators. Some can even produce a gum-like cloud a similar size, shape and colour to their own body which acts as a decoy and makes the cover cephalopod can escape.

Key to plate

1 Longarmed squid Mantle length: 1.5m	2 Whitefish squid Mantle length: 1.5m	3 Angel octopus Mantle length: 1.5m

INVERTEBRATES

Flying Insects

Insects are arthropods (which means they have a hard outside called an exoskeleton) and are closely related to crustaceans (frogs and lobsters) and arachnids (spiders and scorpions). There are at least one million species of insects, and around 100,000 new species are identified every year!

Insects are the only invertebrates that can fly and were the first to leave on Earth. Plants and insects have evolved together over millions of years. Plants have found ways to defend themselves from being eaten by insects while, at the same time, relying on them to spread their pollen and allow them to reproduce.

All insects metamorphose as they mature, which means they undergo a series of changes to their bodies. The word for this transformation from caterpillar to butterfly is perhaps the most well-known example.

INVERTEBRATES

Habitat: Coastal Waters

Coastal habitats appear where the sea meets the land. They are areas of constant change as waves, tides and currents continuously affect the landscape. Despite these challenges, life in coastal areas is the richest in the world. With rivers flooding into the sea and waves constantly eroding the land, there's a never-ending source of nutrients.

Many of the creatures that live in coastal waters, such as crabs, limpets and scallops, have hard shells which protect them from the sharp rocks and powerful currents. Some, such as mussels, can open their shells, allowing them to sift the water for food, while others hunt for prey hiding in crevices.

Some areas of the coast are above the water at low tide and below the water at high tide. Many animals that live in these areas – known as intertidal zones – have cement glands that allow them to anchor themselves to a rock and stay put as the tides rise and fall. Others, like starfish and octopuses, have powerful suckers on their arms which help them to grip slippery surfaces.

Key to plate

1: Northern short-fin squid Mantle length: 1.4cm	2: Lettuce sea slug Length: 5cm	3: Striped venus clam Length: 4cm

Fungarium (Mini Gift Edition)

An elegant mini edition of Katie Scott and the Royal Botanic Gardens Kew's beautiful *Fungarium*.

- Beautiful small format is ideal for gift purchases
- Luxurious finishes including foil, arlin, deboss and ribbon
- In collaboration with the Royal Botanic Gardens Kew
- From the award-winning illustrator of *Animalium* and *Botanicum*, Katie Scott.
- The core *Welcome to the Museum* books have sold a combined quantity of over 1 million copies in 48 languages (as of July 2022)

Fungarium (Mini Gift Edition)

FUNGARIUM

The Tree of Life

All species on Earth are related and connect together in a 'tree of life'. But what does the fungal tree of life look like?

This is a difficult question to answer. Sometimes similar-looking fungi are not at all closely related. Also, because a large proportion of species are still awaiting discovery, it is difficult to build an understanding of historical relationships of the kingdom Fungi.

DNA is helping us to understand how the branches of the fungal tree fit together, including the discovery of new branches such as the Cryptomycota and Microsporidia. These two early groups were originally thought not to contain chitin, a key feature of fungi (see page 10), but DNA later proved this wrong. Other groups, including slowy molds (Zygomycota) and slime moulds (Myxomycota) have been proved to not belong to fungi.

The earliest fungi are thought to have evolved around one billion years ago and to have been simple, single-celled organisms that lived in water. Around 700 million years ago the evolutionary transition from aquatic to land-dwelling fungi is estimated to have taken place. Ascomycota and Basidiomycota are the two fungal groups that able to form highly complex spore-bearing structures. These groups formed around 600-700 million years ago and together contain the vast majority of known fungal species - around 140,000 in total.

Research on the fungal tree continues and a whole new 'invisible' dimension of fungal diversity in our soils, bodies and waterways is being explored - the so-called dark taxa.

9

FUNGARIUM

What is a Fungus?

Historically, fungi were treated as plants and studied by botanists. They were included in *Species Plantarum* by the famous naturalist Linnaeus in 1753. But fungi aren't plants: they don't make food by photosynthesis, they don't have roots and they reproduce with spores. Lichens are not plants either: they are a collaboration between a fungal element and a photosynthesising alga (known as a photobiont).

Fungi are in fact more closely related to animals than plants, just like the outer skeletons of insects and crustaceans. Fungal cell walls are made largely of chitin. While animals ingest their food by ingesting or swallowing, fungi secrete enzymes that dissolve food outside their bodies and absorb the nutrients through their cell walls. Another difference is that animals move around to search for food, while fungi grow towards it.

Key to plate

- Bird's nest fungus**
Chesteria smithii
- Red marasmos**
Marasmius rotula
- Prize-cap lichen**
Crocodon clavophorus
- Leathery goblet**
Crocodon clavophorus
- Velvet lady**
Phellus rubellus
- Enoki-like mushroom**
Hirokuniella velutipes (cultivated form)
- Turkeytail fungus**
Trametes versicolor
- Golden shield lichen**
Xanthoria parietina
- Fly agaric**
Amanita muscaria
- Lane Cove waxcap**
Hygrocybe laniclavata

10

FUNGARIUM

Types of Fungi

Just like animals and plants, fungi have their own lesser-known kingdom. New species are constantly being discovered and scientists think of the estimated 2.2 to 3.8 million species on Earth, fewer than 5 per cent have been identified.

There are at least eight phyla (major groups) of true fungi: Cryptomycota, Microsporidia, Blastocladiomycota, Chytridiomycota, Zoopagomycota, Mucromycota, Ascomycota, and Basidiomycota. Some of the most ancient are single-celled and don't look at all like typical fungi. Most familiar fungi belong to Ascomycota and Basidiomycota, which produce septate hyphae (typical fungal filaments) and can include mushrooms, yeasts and those fungi that associate with algae to form lichens.

Key to plate

- Russule sp.**
(Basidiomycota)
Fruiting body
- Rhizoglyphus plantarum**
(Chytridiomycota)
- Phanerochaete chrysosporium**
(Basidiomycota)
Spore (sporidium)
- Black bread mould**
(Zygomycota)
Reproductive structure
- Canary mushroom**
(Basidiomycota)
Cantharellus cibarius
- Darwin's fungus**
(Ascomycota)
Darwinula radicans
- Upright coral**
(Basidiomycota)
Rhizoglyphus plantarum
- Cladonia aggregate lichen**
(Ascomycota)

11

FUNGAL BIOLOGY

Sexual Reproduction

Fungi can reproduce both sexually and asexually. This is rare and caused great confusion in the past because each reproductive form would often be classed as a distinct species. Even today, scientists sometimes use DNA to identify reproductive 'pairs' of the same fungus.

Sexual reproduction in fungi can only be seen with a microscope. Two nuclei (the membrane-bound structures that contain the cell's genetic material), each with a single set of chromosomes (thread-like structures in which the DNA is packaged in the nucleus), must fuse together. It is a complex process that involves cell division and the exchange and rearrangement of genes. Living organisms including fungi do this because it ensures genetic diversity, fundamental to evolution and ultimately survival. The fusing nuclei can be from the same individual, or different ones of the same species. Once nuclei are fused, they remain in special cells from which new spore-producing structures arise. The new spores will form new fungal colonies.

Key to plate

- Common field mushroom**
Agaricus campestris
a) Development of a mushroom
b) Part of a gill showing basidia and basidiospores.
- Common jellyspot fungus**
Dacrymyces stipitatus
Fork-shaped, branched basidia.
- Common rust fungus**
Phragmidium violaceum
The stalked spore includes a row of four cells with two nuclei each.
- Zygorhynchus sp.**
a) The process of hyphae forming a zygosporangium
b) Zygosporangium and zygospore formed
- Candlestick or candle snuff fungus**
Xylaria hypoxylon
As in most ascomycetes, the ascus contains eight spores.
- Dog lichen**
Peltigera canina
Produces asci with a special form

Oceanarium (Junior Edition)

Written for younger children, more readers than ever can discover the wonders of the animal kingdom in the *Oceanarium Junior*.

- Cover finishes: matt lam, spot UV and foil
- Abridged format makes this the perfect alternative to the large-format book, and offers an alternative price point for consumers.
- Beautiful vintage-inspired artwork by award-winning artist Teagan White
- Published in conjunction with the National Marine Aquarium, part of the Ocean Conservation Trust.

Oceanarium (Junior Edition)

INVERTEBRATA

Jellyfish

Jellyfish wander the ocean drifting with the currents whenever the water takes them. Despite their name, they are not fish but invertebrates as they don't have a skeleton. Their soft, bell-shaped bodies are around 75 per cent water and contain neither brain nor heart. They have bioluminescent but can push themselves gently through the water by flapping their body (the bell) with water and contracting it back out again. Along with coral and anemones, jellyfish belong to the group Cnidaria. All cnidarians are carnivores and use stinging cells to catch prey and to defend themselves. Many jellyfish have long tentacles, which are lined with harpoon-like stings. When jellyfish sting their tentacles into the water the sting has venom into the victim the moment they brush against it. Several species of jellyfish are translocators, meaning other animals will not see the danger about until it's too late, whereas others use bright colours to attract prey. For instance, flower hat jellyfish have fluorescent-tipped tentacles, which may look like green algae to unsuspecting fish. The fish approach the tentacles in the hope of food but instead swim into a fatal trap, sending some young fish and crabs screaming in terror. They rely on a thick mucus coating to protect them or merely dodge the tentacles as they sweep in the water.

Key points

- 1. **Blue jellyfish**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.
- 2. **White-spined jellyfish**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.
- 3. **Sea nettle jellyfish**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.
- 4. **White-spined jellyfish**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.
- 5. **Portuguese man-of-war**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.
- 6. **Flower hat jellyfish**
Bell diameter: 1.5m
Bell height: 1.5m
Tentacle length: 1.5m
The species is the largest jellyfish in the world.

CHORDATA

Habitat: Rock Pool

Rock pools are the small pockets of shallow left behind in the rocky holes of the shoreline at low tide. A very changeable habitat, rock pools vary in size from being a mere puddle to being a pond with varying temperatures and differing amounts of oxygen and space depending on when they are during the rock pool cycle.

Tides are the rise and fall of the planet's ocean. They are caused by the sun and moon's gravitational pull on Earth, making the ocean 'bulge' around its middle and pulling water away from the coast. High and low tides therefore change over the course of a month. To avoid getting caught out by the tide and finding themselves high and dry, a creature must carefully time their activities to fit around the tides' schedule. Some have heavily 'barged' plans, too, latching onto a trail of mucus, or slimy bodies from which they can pull out at high tide. They use the tide to return to the safety of the rocks where they clamp down tightly onto the rocks, leaving water inside their shell.

Key points

- 1. **Rock pool fish**
Length: 10cm
Weight: 10g
The species is the largest fish in the world.
- 2. **Blue-spotted damselfly nymph**
Length: 10cm
Weight: 10g
The species is the largest damselfly nymph in the world.
- 3. **Common frog**
Length: 10cm
Weight: 10g
The species is the largest frog in the world.
- 4. **Common frog**
Length: 10cm
Weight: 10g
The species is the largest frog in the world.
- 5. **Common frog**
Length: 10cm
Weight: 10g
The species is the largest frog in the world.
- 6. **Common frog**
Length: 10cm
Weight: 10g
The species is the largest frog in the world.

FISH

Coral Reef Fish

The coral reef is one of the most diverse and beautiful ecosystems in the ocean and the amount that lives there all rely on it in some way for their survival. Coral reef fish often have beautiful patterns and bright colours which means they can blend in or camouflage against the coral. The shape and appearance of the fish might also be used to attract a mate and certain colours can also give a warning - red and yellow often mean that an individual has poisonous compounds in its or a sting like. Many coral reef fish have heavy toxic to eat food, with specially adapted mouths, stingers and parasites that grow on the algae that grows on the surface of coral. By removing the algae which would otherwise smother the coral, these herbivores help to keep the reef alive. Some fish, such as butterflyfish, consume the coral itself, clearing small patches to new coral can grow.

Prey items such as shrimp, also swim the reef hunting for food. Small coral reef fish, like damselfish and anthias, use the reef's many hiding spaces such as caves and crevices.

Key points

- 1. **Longnose butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.
- 2. **Butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.
- 3. **Butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.
- 4. **Butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.
- 5. **Butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.
- 6. **Butterflyfish**
Length: 10cm
Weight: 10g
The species is the largest butterflyfish in the world.

MAMMALS

Habitat: Kelp Forest

Kelp is a kind of seaweed that grows in cool coastal regions. Unlike plants on land, seaweeds have a holdfast instead of roots, which grips to the rocky seabed, ensuring the kelp is locked in place. Each holdfast has one or more stipes, or stalks, reaching up to the surface. Some types of kelp grow as tall as 45 metres, forming vast forests that tower above the seabed.

All ecosystems need a delicate balance between photosynthesising organisms (such as seaweed), herbivores and carnivores. In the kelp forest, this balance is best seen in the relationship between kelp, sea urchins and sea otters. Sea urchins graze on the kelp, making space for new plant growth. Sea otters then feed on the urchins, keeping their numbers down and ensuring they don't eat all the kelp.

Kelp forests are vulnerable to climate change as warming seas bring less of the nutrients needed for kelp growth and poor water quality reduces the light levels needed for photosynthesis. It is possible therefore that, as our ocean warms, kelp forests may move further north to cooler waters.

Key to plate

- 1. **Kelp forest, Californian coast, United States of America**
Length: Approx. 30m
Bull kelp extract is used in food products, including ice cream.
- 2. **Southern sea otter**
Length: Up to 1.6m
Sea otters were hunted extensively for their fur in the 1700s and 1800s. Their numbers have slowly recovered, but they are still an endangered species.
- 3. **Garibaldi fish**
Length: Approx. 30cm
Male fish defend their nest year-round, and in the spring will clean the nest and entice females in with swimming performances.
- 4. **Giant kelp**
Length: Approx. 45m
Giant kelp can grow as much as 45cm a day, making it one of the fastest-growing organisms on Earth. When detached from the seabed, it floats in mats, giving shelter to many animals.
- 5. **Leopard shark**
Length: Approx. 1.6m
Young sharks are experts at finding straits and crevices under the sandy seabed and often visit kelp forests.
- 6. **California sheephead**
Length: Approx. 30cm
This species starts out as a female and turns into a male later in life.
- 7. **Purple sea urchin**
Length: Approx. 10cm
These sea urchins are a threat to kelp forests. Since 2014, 95 per cent of the bull kelp forests in Northern California, USA, have been devoured by them.
- 8. **Rockfish**
Length: 12-104cm, depending on species.
Some rockfish can live for around 100 years.

Under the Starlit Sky

This beautifully illustrated book takes readers on a journey from the roots to the canopy of a majestic old oak tree, right in the heart of Europe's most ancient forest ... with a huge fold-out surprise on the final spread.

- The follow up title to the beautiful *Up in the Canopy*
- As told by real life explorer and tree climber, James Aldred (winner of the 2022 Wainwright Prize for Non-Fiction)
- Illustrated by award-winning duo *Good Wives and Warriors*.

The Little Gardener's Handbook

A vibrant introduction to gardening.

- A vibrant first introduction to gardening for ages 6+
- Includes DIY activities to try at home.
- Text by expert ecologist and educator, Michael Holland.
- Colourful, charming artwork by illustrator Maria Dek.
- Expanding the younger side of the Big Picture Press list.
- Gardening is a subject only growing in popularity.
- Arlin quarter binding and matt lam cover finishes.

The Little Gardener's Handbook

ALL ABOUT SOIL

Soil is the brown earth that plants grow in and it plays a very important role in supporting life on our planet. The best way to keep your plants happy is to take care of their soil!

Check a seed has sprouted, the soil helps to anchor the plant's roots in the ground. From here, the roots can absorb water, nutrients and minerals from the soil that helps the plant to grow.

Soil is teeming with life. Did you know that there are more living things in a handful of soil than there are humans on our planet? Look for all of these tiny organisms such as worms, fungi, insects and bacteria.

These organisms have special functions. Worms, for example, are little underground diggers. They move dirt through the soil's surface. This is called aerating. As they dig, they pump out what they have eaten, which is a wonderful kind of food for the soil.

GET TO KNOW YOUR SOIL

Soils are composed of rocks, but these all contain sand, silt, clay, moisture and air as a garden soil. It's important to get to know your soil. If a plant is from a nearby part of the world and you're growing it in a local soil, it won't be happy! Instead, a plant from a foreign area won't like to grow in a sandy soil.

1. Bring a shovel from pages 10-11. Collect a soil sample from your garden. Cut it into a cylinder of paper, remove any twigs, bits, and frogs in your garden, crush the soil and mix it in a jar or bottle.
2. Next, pour 100 ml of water into the jar and mix it thoroughly. Then pour the mixture into a glass and let it settle for at least 24 hours to settle.
3. You should now be able to see the different layers of your soil. The amount of soil in different layers and the texture when you pour it, will tell you the soil's name. Use what you know to write an ID for your particular soil in the water.

GARDEN FOES

Sometimes your garden might be visited by some not so welcome wildlife visitors – sometimes their way through your plants and nibbling away at them. Rather than using harmful chemical pesticides, there are some natural ways you can discourage any unwanted visitors to your garden.

ENCOURAGE BENEFICIAL ANIMALS
You can encourage beneficial creatures naturally by encouraging beneficial visitors such as ladybirds, bees, butterflies, birds, and frogs in your garden. This is done by providing them with food, shelter, and a safe place to lay their eggs, making a bug hotel or adding a bird bath.

PEST REPELLENTS
To repel insects, you can use natural ingredients such as vinegar, citrus, garlic, and chili. These are safe for your plants and can be used as a natural pest repellent.

PROTECT PLANTS
Use physical barriers to protect your plants from pests. For example, use netting to keep birds away from your plants.

KEEP AN EYE OUT FOR PESTS
Check your plants regularly for signs of pest damage. If you notice any damage, act quickly to remove the pests. This will help to prevent further damage to your plants.

PLANTS THAT HELP OTHER PLANTS

Did you know that certain plants can help other plants in your garden? Some plants can help other plants by attracting beneficial insects or by providing shade and protection. Some plants can also help your plants grow better.

Some plants can help other plants by attracting beneficial insects or by providing shade and protection. Some plants can also help your plants grow better.

GROW CUPS OF NASTURTIUMS

Did you know that you can eat the petals from certain flowers? Nasturtiums are bright and colourful, and they have a little peppery taste. You can add them to a salad for a burst of extra flavour.

YOU WILL NEED:

- Old cups or tins
- Straw
- Nasturtium seeds
- Water

1. In the bottom of each cup, add a layer of straw. This is to allow the water to drain away from the roots because the cups do not have any drainage holes.
2. Fill each cup with compost.
3. Place a couple of holes in the compost and drop in the seeds.

5. After a week or two, the seeds will start to shoot. These are the leaves growing from water. Little and often, water the plants.
6. In a few more weeks, flowers will appear. You can harvest them whenever you like. If you do on the plant, cut and place off with a scissors. The plant will grow again.

WELCOME TO THE WONDERFUL WORLD OF GARDENING!

Whether you have a big garden or a small windowsill, you can make the world a greener place. Gardening is one of the best hobbies in the world and it's good for you, your neighbourhood and our planet! People have been gardening in one way or another for thousands of years, so you will be continuing a very long and important tradition.

In this book, you'll learn about how plants work, how to grow your own vegetables, how to encourage wildlife to your garden and why protecting plants is important for our lovely planet. Along the way, there will be plenty of activities and experiments for you to try for yourself – mostly using everyday materials you can find at home.

What are you waiting for? Let's begin!

Food from Flowers: The Great Pollination Investigation

Explore the secrets of nature in this pollination investigation.

- This non-fiction picture book is packed full of facts with information on photosynthesis, the pollination process, the life cycle of plants, flower anatomy, animal and insect pollinators, such as bats, bees, beetles, birds and more.
- Full of scientific information that supports the curriculum.
- Fun novelty elements help kids engage with the subject matter.
- This book is the perfect picture book for children aged 5+ who are fascinated by nature and the plants that grow in it.
- Bright and beautiful artwork from author-illustrator Deborah Hocking.

There are Mammals Everywhere

An illustrated introduction to mammals.

- A combined quantity of over 100,000 copies worldwide (as of July 2022) has sold for Britta's *There Are...* series
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally
- Contents: There are mammals everywhere; It's a mammal! So what is that that?; Mammals have been around for ages; Where do mammals live?; The savannah; Staying alive; Feeding; Moving (elephant spotlight spread); Mammal parents; Mali elephants; Birds and people
- The colourful exploration of mammals follows on from Britta Teckentrup's *There are Fish Everywhere*, *There are Bugs Everywhere*, *There are Reptiles Everywhere* and *There are Birds Everywhere*.

There are Mammals Everywhere

IT'S A MAMMAL! (SO WHAT IS THAT?)

There are almost 6,000 species of mammal alive today. Mammals may look very different on the outside, but they all have **skullcaps** that allow them to perform a wide range of movements. Some mammals have four legs and a tail, but others walk on two legs, fly using two wings, or have flippers and fins.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn from their experiences. Some mammals have even bigger brains than others.

BREATHING AIR
Mammals breathe air. They have lungs and a diaphragm to help them breathe. Some mammals, like whales, breathe through blowholes on top of their heads.

RECORD-BREAKERS
Mammals are the only animals that can fly. Bats are the only mammals that can fly. Some mammals are the largest animals on land, like elephants. Some are the smallest, like shrews. Some are the fastest, like cheetahs. Some are the longest-lived, like whales.

BATS
Bats are the only mammals that can fly. They have wings made of skin stretched over their forelimbs. They are also the only mammals that can fly at night.

CATS
Cats are the only mammals that can purr. They have a special muscle in their throats that allows them to do this. They are also the only mammals that can land on their feet every time.

SEALS
Seals are the only mammals that can walk on their flippers. They have a special skin on their flippers that allows them to do this. They are also the only mammals that can walk on their flippers.

MAMMALS HAVE BEEN AROUND FOR AGES

Mammals have been around for a really long time. The first mammals looked like shrews, which are tiny animals with long, pointed snouts. They lived about 200 million years ago. Other mammals looked like dogs and some of these were much bigger than cats. They lived about 100 million years ago. Some mammals looked like horses and some of these were much bigger than elephants. They lived about 65 million years ago. Some mammals looked like primates and some of these were much bigger than gorillas. They lived about 65 million years ago. Some mammals looked like humans and some of these were much bigger than humans. They lived about 65 million years ago.

PROBOSCIDEANS
Proboscideans were among the earliest mammals to have the mammalian brain. They were the first mammals to have a brain that was as big as the brains of modern mammals.

MAMMALS
Mammals are the only animals that have a brain that is as big as the brains of modern mammals. They are also the only animals that have a brain that is as big as the brains of modern mammals.

PRIMATE
Primates are the only mammals that have a brain that is as big as the brains of modern mammals. They are also the only mammals that have a brain that is as big as the brains of modern mammals.

HUMAN
Humans are the only mammals that have a brain that is as big as the brains of modern mammals. They are also the only mammals that have a brain that is as big as the brains of modern mammals.

WHY ARE MAMMALS UNIQUE?

Mammals are a large and very successful group of animals. They have been able to spread across the world and survive in all sorts of habitats because they have some unique ways to stay warm, find their young and get food.

WARM BLOOD
Mammals are endothermic, which means they can control their body temperature. They can keep their body warm even when the weather is cold. This means they can live in all sorts of places, from the Arctic to the tropics.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn from their experiences. Some mammals have even bigger brains than others.

SEA OTTERS
Sea otters are the only mammals that live in the Pacific Ocean. They are also the only mammals that use tools. They use sea urchins to make rafts to float on. They also use sea urchins to make rafts to float on.

CAN YOU FIND?
Other animals like to come out in a beavers' lodge, including water voles. Can you find one of those small, furry rodents with a long tail?

WHERE DO MAMMALS LIVE?

Nearly all species of mammals live on land - about 98 per cent of them. However, there are groups of mammals that spend most, or all, of their lives in water. These include **pinnipeds, whales and dolphins**. Other groups of mammals are superb swimmers and spend lots of time in the water, but choose to stay on land when they give birth or raise their young.

WHALES
Whales are perfectly adapted to life in the ocean. They have smooth skin and torpedo-shaped bodies that slip easily through the water. They have flippers instead of legs and they breathe using blowholes on the top of their heads.

BEAVERS
Beavers belong to a group of mammals called **rodents** that have super-strong front teeth. They use these teeth to gnaw trees and branches and use the wood to build their homes in the middle of a pond or slow-flowing river.

These include **pinnipeds, whales and dolphins**. Other groups of mammals are superb swimmers and spend lots of time in the water, but choose to stay on land when they give birth or raise their young.

TUNDRA
The land around the Arctic is called the **tundra** and it is famous for its snowy blizzards and blustery winds. It is a difficult place to live - unless you can stay snug inside your own super-thick fur coat. **Musk oxen** have hair that almost touches their toes and they snuggle up next to each other to get the benefit of some buddy-body-warmth!

FORESTS
Tropical forests are packed with tall trees that bloom all year round, producing plenty of fruit for any animals that can reach it. **Orang-utans** spend almost all of their lives in the branches, using their strong arms to climb from tree to tree, following the fruit as it ripens.

DESERTS
Deserts are very dry habitats that experience extreme temperatures. **Bactrian camels** survive desert life by storing food and water as fat inside their two **humps**. They grow thick, shaggy fur for the icy winter, and shed it for the hot summer months.

CAVES
Many species of bats gather together in caves in big groups called **colonies**. They rest during the day by hanging upside down from the cave ceiling and go hunting at night. Some caves can house more than five million bats!

Earthlings

In news that has rocked the scientific community, a mysterious report about planet Earth has been discovered. *Earthlings* is an account of human life on Earth - written by aliens.

- Gently touching on important subjects such as climate change, the book is an invitation to reflect together - as Earthlings - and consider how we treat our planet.
- Packed with humour and detail - perfect for young readers to pore over.
- Bold, retro-inspired artwork and a stylish design makes this feel like a vintage classic

Earthlings

FAKTY NA KONIEC

There are eight billion Earthlings living on Earth.

There are more and more earthlings. 200 years ago, one billion people walked the planet. In 2056 there will already be ten billion.

More than half of Earthlings today live in cities, but for most of history, Earthlings lived mainly in villages. As recently as 200 years ago, 95 out of 100 Earthlings lived outside of the cities.

Nine out of ten earthlings in cities breathe polluted air.

Three out of ten residents of cities live in slums.

Na 100 dorosłych Ziemiaków 87 potrafi czytać i pisać, 87 poszło do szkoły podstawowej, 66 uczyło się w szkole średniej, 40 zdobyło jakiś rodzaj wykształcenia wyższego, a siedmiu ukończyło studia uniwersyteckie.

Dawniej umiejętność czytania i pisania była u Ziemiaków niezwykle rzadka. Pisać i czytać potrafili tylko przedstawiciele władzy, duchowieństwo i nauki. W Europie niezliczeni piśmiennicy posługiwali się wyłącznie łaciny. Książek, przepisywanych rękopiśmiennie, było mało. Były one bardzo drogie i dla większości niedostępne. Dopiero wynalazek druku około 1450 roku, które spowodowało masową dostępność książek i gazet w językach narodowych, wpłynęło na rozpowszechnienie się umiejętności czytania. Zmienił się też sposób lektury: zamiast na głos zaczęto czytać cicho, prywatnie.

W 1900 roku Ziemiaków i diabelków gromi wyznaczone. Często posiadają się stąd tylko marzankowie, których dzieci nie chcą się uczyć języka przodków. 50% języków posiada się teraz na 100 000 osób, 25% - mniej niż 1000 osób, a 64 - tylko jedna albo dwie osoby. W 1000 lat temu Ziemiaków używali 3000 języków. W 2050 roku będą używać już tylko 4000.

In the year 0, the Earth's population was 200 million, in 1000 - half a billion, in 1927 - two billion, and in 1960 - 3 billion. 55% of Earthlings live in cities. By 2056, cities will be home to 70% of Earthlings.

My First Book of Space

Explore the wonders of the cosmos in this gorgeously illustrated first guide to space.

- Split into four clear sections for guided reading and learning about the topic
- Charming illustrations by award-winning illustrator Aaron Cushley (won the SLA Information Book Award 2021 for *How Many Mice Make an Elephant*)
- Large format for lap-time reading, with busy pages to pore over again and again
- Includes a search-and-find element featuring a shooting star on every page
- *My First Book of Nature* has sold over 64,000 copies worldwide (as of September 2023)

- Sample contents: The First Railways; Steam Locomotions; The Ffestiniog Railway; The Orient Express; Freight Trains; The Baikonur Cosmodrome; Mail by Rail; The California Zephyr; Mountain Railways; The Darjeeling Himalayan Railway; Trams; Sky Lines; Railways At War; The Princess Christian; High-speed Rail; The Shinkansen
- Beautiful artwork by multi award-winning artist Ryo Takemasa
- Stunning journey through the history of locomotives, suitable for all ages
- Expertly written by railway historian, Alastair Steele

Locomotion

THE FIRST RAILWAYS

Today, railways are commonplace in many parts of the world. They enable around one billion people to travel around the world, and transport goods and millions of passengers every single day. It is amazing to think that they have only been around for less than 200 years.

Railways appeared long before the first steam engines were invented. These 'rudest' appeared in Europe during the 17th century and were developed to haul heavy loads. They were built on wooden tracks and used horses to pull the heavy loads. The first railway was built in 1725 in Cornwall, England, to transport tin ore from the mines to the coast.

The first steam engines were used in Britain during the 18th century to pump water to water wheels and to power mills. In 1802 the Scottish inventor James Watt built the first steam engine locomotive.

Over the years, inventors brought in ideas one by one, leading to the first railway, the Stockton and Darlington Railway, in 1825. The first railway was built in 1825 in Cornwall, England, to transport tin ore from the mines to the coast.

Putting this text in to influence many other engines. The first public railway to use steam locomotives, the Stockton and Darlington Railway in England, opened in 1825. It was designed by George Stephenson, who was one of the inventors of the first steam engine.

THE GAUGE

One of the earliest and most significant developments was the standard gauge. This was the distance between the rails, which was set at 4 feet 8 1/2 inches. By using the same gauge on different railways, locomotives could travel on any line. This has been the standard gauge ever since.

The standard gauge was set by the British in 1825. It was the same as the gauge used in the first railway, the Stockton and Darlington Railway, which was built in 1825. The standard gauge was set by the British in 1825. It was the same as the gauge used in the first railway, the Stockton and Darlington Railway, which was built in 1825.

STEAM LOCOMOTIVES

Once the possibility of mass-produced engines had been realized, a whole host of locomotives were tried and tested around the world. Some proved to be better, others less suitable and some were dangerous, but the arrival of one revolutionary design changed the course of history. Another, designed by engineer Robert Stephenson (George Stephenson's son - see page 51) was to provide the principles of design for the rest of the century of steam locomotives that followed.

Over time, the first steam engine through the water to land on rails. The water was used to heat the boiler, which in turn heated the steam, which in turn heated the boiler.

As the pressure built, the steam in the boiler pushed the pistons. These pistons were connected to the wheels, which in turn pushed the train forward.

The original steam engine was built by James Watt in 1769. It was the first steam engine to use a separate condenser. This was a great improvement on the original Newcomen engine, which had to heat the cylinder every time it was used.

A great deal of British locomotive design was in the hands of George Stephenson. He was the first to use a separate condenser. This was a great improvement on the original Newcomen engine, which had to heat the cylinder every time it was used.

- RAILWAYS OF THE WORLD - THE FESTINIING RAILWAY

The Festiniog railway in North Wales is a marvel of 19th century engineering. It was built in 1825, the first year of the railway boom in Britain. It was the first railway to use a separate condenser. This was a great improvement on the original Newcomen engine, which had to heat the cylinder every time it was used.

The Festiniog railway is a marvel of 19th century engineering. It was built in 1825, the first year of the railway boom in Britain. It was the first railway to use a separate condenser. This was a great improvement on the original Newcomen engine, which had to heat the cylinder every time it was used.

This was a great improvement on the original Newcomen engine, which had to heat the cylinder every time it was used.

ELECTRIC LOCOMOTIVES

The first electric train was tested as far back as 1837. Unlike steam trains, electric locomotives do not carry fuel on-board. Instead, they are powered by electricity which can be supplied from overhead lines, a third rail or in storage such as batteries. Because electric trains can be powered by renewable energy sources, they are considered less polluting than steam or diesel trains.

The first electric passenger train was presented by Werner von Siemens at an exhibition in Berlin in 1837. Consisting of a small locomotive and three cars, it reached a speed of just 13km/h.

The ETR 200 is a record-breaking electric passenger train. It is widely considered one of the first ever high-speed trains and was put into service in 1936. In 1938, it broke the speed record for trains by reaching just over 201km/h.

The ICE (Intercity Express) is one of Germany's most successful electric trains. The third generation ICE 3 can reach speeds of 300km/h. Since 2018, it has run on entirely renewable energy sources.

DIESEL LOCOMOTIVES

In a diesel locomotive, the power comes from an engine that burns diesel oil. While a steam locomotive needed two people to crew it and hours to attain the right steam pressure, a diesel locomotive could simply be switched on and driven away, making them much easier and much cheaper to run. Rudolf Diesel patented his first diesel engine in 1898, but it wasn't until around 1912 that they were first used in a locomotive.

The famous DRG Class SVT 877 *Hamburg Flyer*, often referred to as the 'Flying Hamburger', was first put into service in 1933. Its smooth, rounded shape was influenced by Zeppelin airships allowing for minimal air resistance.

The De10s, built in 1956, was considered the most powerful diesel locomotive in the world at that time.

The Intercity 125 is one of the most successful diesel trains of all time. So named because it was designed to cruise at 125 mph (about 201km/h) when in service, it also holds the all-time speed record for diesel trains of 238km/h, which it reached in 1987.

This visually extraordinary book presents the history of money as it has never been seen before - from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

DIFFERENT KINDS OF MONEY

Money serves because it is traded, but this trade doesn't come out of nowhere. It has to be based on something. There are several reasons why money might be traded. Some money is traded because it is made of something valuable, such as gold or silver. This is called commodity money. Another kind is traded because it represents something valuable. This is called representative money. A third kind is traded simply because a government tells it is valuable. This is called fiat money.

COMMODITY MONEY

The earliest form of commodity money was cowrie shells. They were small, round, and easy to carry. They were used in many parts of the world. Commodity money is made from things that have value on their own. Examples include gold, silver, and salt. Commodity money is traded because it is made of something valuable. This is called commodity money.

REPRESENTATIVE MONEY

The earliest form of representative money was paper money. It was made from paper and had a picture of a person on it. It was used in many parts of the world. Representative money is made from things that have value on their own. Examples include gold, silver, and salt. Representative money is traded because it represents something valuable. This is called representative money.

FIAT MONEY

Fiat money is made from paper and has a picture of a person on it. It is used in many parts of the world. Fiat money is traded because a government tells it is valuable. This is called fiat money.

A WORLD WITHOUT MONEY

To understand why money is useful, let's try to imagine a world without money. In such a world, the only way to get hold of the things you need would be to make or grow them, or steal them from other people. These people are called barter. Barter is the exchange of goods or services for other goods or services without using money.

BARTER AND BITS

Barter is the exchange of goods or services for other goods or services without using money. It is a system where people trade their own goods for the goods they need. For example, a farmer might trade his wheat for a blacksmith's services. Barter is a system where people trade their own goods for the goods they need.

THE PROBLEMS WITH BARTER

Barter has several problems. First, it is difficult to find someone who has what you need and wants what you have. Second, it is difficult to measure the value of different goods. Third, it is difficult to store goods for a long time. These are the problems with barter.

CONSEQUENCE OF WANT

Barter is a system where people trade their own goods for the goods they need. It is a system where people trade their own goods for the goods they need. This is the consequence of want.

WHAT MAKES A GOOD FORM OF MONEY?

The earliest forms of money were very different to the money we use today. There was no paper or printing process or machines to make money. People had to make it with their hands. They used the natural world. All of the first forms of money were made of something that was valuable on its own. This is called commodity money.

COMMODITY MONEY

Commodity money is made from things that have value on their own. Examples include gold, silver, and salt. Commodity money is traded because it is made of something valuable. This is called commodity money.

REPRESENTATIVE MONEY

Representative money is made from things that have value on their own. Examples include gold, silver, and salt. Representative money is traded because it represents something valuable. This is called representative money.

FIAT MONEY

Fiat money is made from paper and has a picture of a person on it. It is used in many parts of the world. Fiat money is traded because a government tells it is valuable. This is called fiat money.

QUIRKY CURRENCIES

Many unusual objects were used as money in the era before notes and coins. These included foodstuffs such as barley, rice, corn and wheat. The Chinese used tea bricks to pay for things, whereas the Aztecs used cacao beans, and the peoples of ancient Africa and the Middle East measured value in coffee beans. The Mesopotamians kept sacks of grain in protected barns, much like the banks of today. When stored carefully, these foods could provide a reasonable store of value. But a storm or a bad harvest could wipe out your wealth.

MONEY YOU CAN EAT

Some surprising foods have been used as units of exchange in different parts of the world. Here are some of them.

BUTTER

The Pilgrims of North America used butter as a form of money. They used it to buy goods and services. Butter was a valuable commodity because it was easy to store and transport.

CHEESE

In the early 1800s, cheese was used as a form of money in some parts of the world. It was a valuable commodity because it was easy to store and transport.

EELS

Dried and smoked eels were used as a form of money in some parts of the world. They were a valuable commodity because they were easy to store and transport.

COCONUTS

For the Kusa Yaku, who live on islands off the coast of Papua New Guinea, coconuts were used as a form of money. They were a valuable commodity because they were easy to store and transport.

EGGS

When Venetians were sailing from the island of Crete to the island of Rhodes, they used eggs as a form of money. They were a valuable commodity because they were easy to store and transport.

POTATO MASHERS

In ancient Cameroon, potato mashers were used as a currency. These heavy iron objects, called ensusbas, were shaped like a club.

KISSI PENNIES

The kissi penny was a currency used mainly in West Africa in the first half of the twentieth century. They were long iron rods, usually arranged in bundles of twenty. A cow could be bought for 30 or 40 bundles.

IRON SNAKES

The Lobi tribe of Burkina Faso used iron snakes as a currency. They would also attach them to their calves as a protection from snake bites and lightning.

KNIVES

Large bronze knives circulated as currency in ancient China between 600 and 200 BCE. According to one story, this started when a prince who was running low on money to pay his troops allowed them to use their knives to pay for goods in the local village.

RAI STONES

The small Pacific island of Yap possesses the world's biggest money. Rai stones are huge discs of rock weighing up to 8 tonnes each. The stones are rarely moved, and are not used for day-to-day transactions, but they change hands as ceremonial gifts, to forge alliances, resolve conflicts or to apologise for wrongdoing.

The World's First Rollercoaster

Amazing inventions stories in comic-book form by Blue Peter Award-winner Mike Barfield.

- An irresistible way into science and technology with a dash of history from the brilliant Mike Barfield, author of *A Day in the Life of a Poo, a Gnu and You*, winner of the 2021 Blue Peter Award for a Book With Facts. Mike's books have sold in over 40 territories.
- Featuring the greatest inventions in architecture, travel, the home, food, fashion, toys, sports, technology and more, this book is packed with facts for curious minds. Includes tips on sending in a patent and profiles of young inventors alongside greats such as Diebedo Kere, Bertha Benz, Percy Spencer, Momofuku Ando, Kano Jigoro and Jawed Karim.

The World's First Rollercoaster

HIGHLY INVENTIVE

DIÉBÉDO KÉRÉ
Kéré is a young architect from Gambia, Africa. He's famous for his sustainable buildings that use local materials and designs that help the environment.

Could I make my dream come true?
Kéré's dream is to build a school for his village. He wants to use local materials and designs that help the environment. He's a really smart and hard-working young man.

But it's been a long journey – literally!
Kéré has to travel a long way to get to the school. He has to cross a river and go through a forest. It's a really long and difficult journey.

He spent one year building the school. It was a really big job. He used local materials and designs that help the environment. It's a really smart and hard-working young man.

IT's been a great journey – and it isn't over yet!

BULLET TRAIN

HELLO, YELLOW!
Japan's bullet trains are the fastest in the world. They can travel over 300 km/h.

HELLO, BLUE!
The world's fastest bullet train is the Shinkansen. It can travel over 300 km/h.

HELLO, REDDY!
The world's fastest bullet train is the Shinkansen. It can travel over 300 km/h.

HELLO, BLUE!
The world's fastest bullet train is the Shinkansen. It can travel over 300 km/h.

WHATEVER NEXT? BULLET POINTS

HELLO, YELLOW!
Japan's bullet trains are the fastest in the world. They can travel over 300 km/h.

FLUSH TOILET

HELLO, BLUE!
The flush toilet was invented in 1596. It was a really smart idea.

HELLO, REDDY!
The flush toilet was invented in 1596. It was a really smart idea.

HELLO, BLUE!
The flush toilet was invented in 1596. It was a really smart idea.

WHATEVER NEXT? TAKE A SEAT

HELLO, BLUE!
The airplane seat was invented in 1902. It was a really smart idea.

HELLO, REDDY!
The airplane seat was invented in 1902. It was a really smart idea.

HELLO, BLUE!
The airplane seat was invented in 1902. It was a really smart idea.

ROLLERCOASTER

HELLO, BLUE!
The rollercoaster was invented in 1881. It was a really smart idea.

HELLO, REDDY!
The rollercoaster was invented in 1881. It was a really smart idea.

HELLO, BLUE!

HELLO, BLUE!
The rollercoaster was invented in 1881. It was a really smart idea.

HELLO, REDDY!
The rollercoaster was invented in 1881. It was a really smart idea.

WHATEVER NEXT? ON A ROLL

WE HAVE LIFT OFF!
The forces felt by rollercoaster riders can be greater than those felt by astronauts during rocket launches, but for much briefer times.

2000M!
The world's fastest rollercoaster is the Formula Rossa in Abu Dhabi, Dubai. The cars reach a speed of 240 km/h in under five seconds!

GOING UP!
Rollercoaster fans have their own language. The floating feeling you get on hills is known as 'airtime'.

GOING LOOPY!
Rollercoaster loops are shaped like upside-down teardrops – not circles – as this makes them safer to ride.

SMILE PLEASE
Rollercoaster cameras have snapped some odd sights.

Dinosaur Desert

A dino-mite adventure story to inspire the next generation of scientists and explorers!

- Publishing on the 100th anniversary of Zofia Jaworowska's birth, the book has been created in collaboration with her family using extensive archive material.
- Beautifully illustrated by Polish artist Ola Plocinska, the book includes a mix of graphic novel spreads, kit lists and wonderful scenes of the Gobi Desert as well as detailed information on how to find fossils to inspire budding palaeontologists.

Discover the rich history, vibrant culture and unique identity of each nation through its flag!

- A vibrant exploration of our world's marvellous flags! Take a fact-filled and fun journey across the contents to discover all that lies in our national flags.
- Content is split into 5 chapters based on the continents: Europe, Asia, the Americas, Africa and Oceania. Each section features a chapter opener, 4-5 spreads looking at specific flags in detail, and a theme spread which looks at the world more broadly.
- Feature spreads look at an individual flag's history, symbolism and meaning, and also include 2 or more other flags which share a similarity in some way, whether that be a symbol, geographical location or a shared history.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

Of all the food items that have been invented, ice cream is probably the most popular. It's a treat that's enjoyed by people of all ages and in all climates. The first recorded recipe for ice cream was written in a Chinese text from the 10th century. It was made with snow and fruit. In the 17th century, a French chef named Francesco Procopio created the first 'ice cream parlor' in Paris. He used a machine to churn the mixture, which was then served in a glass. The modern ice cream cone was invented in the 1920s by an Italian immigrant in the United States. Today, there are over 100 different flavors of ice cream, and it's a popular treat in many cultures around the world.

Easy Ice Cream

1. In a large bowl, mix 2 cups of heavy cream, 1/2 cup of sugar, and 1/2 cup of vanilla extract. Whisk until thick and creamy.

2. In a separate bowl, mix 1/2 cup of milk and 1/2 cup of sugar. Heat on the stove until the sugar is dissolved.

3. Pour the milk mixture into the cream mixture and whisk together.

4. Pour the mixture into a shallow dish and freeze for 2-3 hours. Stir every hour.

5. Once frozen, scoop into cones or cups and enjoy!

Bicycle

"Freedom on two wheels"

15

Did you know that the first bicycle was called a 'velocipede'? It was a wooden board with two large wheels and no pedals. The first person to ride a bicycle was a Frenchman named Sivardier in 1817. The modern bicycle was invented in 1868 by two Englishmen, James Starley and John Kemp Starley. They created the 'boneshaker' bicycle, which had a diamond frame and a chain drive. The bicycle became popular because it was a fast and affordable mode of transport. Today, there are many different types of bicycles, from road bikes to mountain bikes, and they are used for recreation, exercise, and commuting.

Pertious Penny-Farthing

It gives the 1st of August, 1869, a name on the coast. First, the 'boneshaker' bicycle was called a 'velocipede'. It was a wooden board with two large wheels and no pedals. The first person to ride a bicycle was a Frenchman named Sivardier in 1817. The modern bicycle was invented in 1868 by two Englishmen, James Starley and John Kemp Starley. They created the 'boneshaker' bicycle, which had a diamond frame and a chain drive. The bicycle became popular because it was a fast and affordable mode of transport. Today, there are many different types of bicycles, from road bikes to mountain bikes, and they are used for recreation, exercise, and commuting.

Camera

"Magicians"

24

Although it's often thought of as a simple device, the camera is a complex piece of technology. The first camera was invented in 1816 by a Frenchman named Nicéphore Niépce. He created the 'chambre noire', which was a dark box with a lens on one side and a piece of light-sensitive paper on the other. When light entered the box, it created a reversed image of the scene outside. The camera became popular because it allowed people to capture and share memories. Today, cameras are used in many different ways, from taking photos to filming movies.

Developed to Perfection

Henry Fox Talbot is the man who made the camera a practical device. He invented the 'calotype' process, which allowed for the mass production of photographs. The camera became a popular tool for artists and scientists alike. Today, cameras are used in many different ways, from taking photos to filming movies.

High-Speed Train

"No-speed" "No-stops"

25

Before the 19th century, the only way to travel long distances was by horse-drawn carriage or stagecoach. The first high-speed train was invented in 1825 by George Stephenson. He created the 'Rocket', which was a steam locomotive that could travel at speeds of up to 25 miles per hour. The high-speed train became popular because it was a fast and reliable mode of transport. Today, high-speed trains are used in many different parts of the world, and they are becoming increasingly common.

Marvelous Maglevs

The first maglev train was invented in 1971 by a Japanese engineer named Chikashi Nagamatsu. It was a magnetic levitation train that could travel at speeds of up to 500 miles per hour. The maglev train became popular because it was a fast and quiet mode of transport. Today, maglev trains are used in many different parts of the world, and they are becoming increasingly common.

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine on a hill or in a field. It's a device that converts the kinetic energy of the wind into electrical energy. The first wind turbine was invented in 1890 by a Danish engineer named Poul la Cour. He created the 'Danish Windmill', which was a vertical-axis wind turbine. The wind turbine became popular because it was a clean and renewable source of energy. Today, wind turbines are used in many different parts of the world, and they are becoming increasingly common.

Green Energy

The first wind turbine was invented in 1890 by a Danish engineer named Poul la Cour. He created the 'Danish Windmill', which was a vertical-axis wind turbine. The wind turbine became popular because it was a clean and renewable source of energy. Today, wind turbines are used in many different parts of the world, and they are becoming increasingly common.

Helicopter

"A surprising way to fly"

35

When you think of a helicopter, you probably think of a machine that can take off and land vertically. The first helicopter was invented in 1907 by a French engineer named Paul Cora. He created the 'Cora Helicopter', which was a single-rotor helicopter. The helicopter became popular because it was a versatile mode of transport. Today, helicopters are used in many different ways, from rescue operations to military operations.

Versatile VTOLs

The first helicopter was invented in 1907 by a French engineer named Paul Cora. He created the 'Cora Helicopter', which was a single-rotor helicopter. The helicopter became popular because it was a versatile mode of transport. Today, helicopters are used in many different ways, from rescue operations to military operations.

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles – no carts, cars, bikes, buses, trucks, trains, trams or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3200 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips"

18

The invention of the Internet – a network of computers that 'speak' to each other – was a concentrated effort in the United States. The first computers were connected to each other in 1969 during the Cold War (1947-1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: LOGIN, but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want – books, food, holidays, cars – with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

From Cells to Ourselves

From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

From Cells to Ourselves

HOW DID LIFE BEGIN?

THE 1920s American chemist Stanley Miller and British physicist James Watson conducted the first experiment to show how simple molecules like water and methane could combine to form amino acids, the building blocks of proteins and other essential molecules.

1953 James Watson and Francis Crick discovered the structure of DNA, the genetic code that carries the instructions for building an organism.

1960s The discovery of the fossil record of early life forms, including the first simple cells, provided evidence for the theory of evolution.

1980s The discovery of the first simple cells, including the first simple cells, provided evidence for the theory of evolution.

1990s The discovery of the first simple cells, including the first simple cells, provided evidence for the theory of evolution.

2000s The discovery of the first simple cells, including the first simple cells, provided evidence for the theory of evolution.

2010s The discovery of the first simple cells, including the first simple cells, provided evidence for the theory of evolution.

2020s The discovery of the first simple cells, including the first simple cells, provided evidence for the theory of evolution.

THE DINOSAUR DETECTIVES

In the 19th century, scientists discovered, investigated and named many species of dinosaurs. But for the first time, these dinosaur detectives:

MARY ANNING (1804-1847) was a young girl who lived in Lyme Regis, Dorset. She was known for her discovery of fossil shells and other marine life. She was the first to describe the fossil of a pterosaur, which she named 'Pterodactylus'.

WILLIAM BUCKLAND (1784-1861) was a geologist and naturalist. He was the first to describe the fossil of a dinosaur, which he named 'Megalosaurus'.

RICHARD OWEN (1804-1892) was a naturalist and geologist. He was the first to describe the fossil of a dinosaur, which he named 'Dinosauria'.

OSBORN MARTELL (1850-1932) was a geologist and naturalist. He was the first to describe the fossil of a dinosaur, which he named 'Tyrannosaurus Rex'.

THE GREAT OCEAN WALKER was a geologist and naturalist. He was the first to describe the fossil of a dinosaur, which he named 'Tyrannosaurus Rex'.

THE END OF THE DINOSAUR AGE

For a long time, people believed that the dinosaurs were the only animals that ever lived on Earth. But in the 19th century, scientists discovered that there had been many other animals living on Earth at the same time as the dinosaurs. This led to the discovery of the fossil record, which showed that the dinosaurs were not the only animals that ever lived on Earth.

1830 The first fossil of a dinosaur was discovered in England.

1841 The first fossil of a dinosaur was discovered in England.

1842 The first fossil of a dinosaur was discovered in England.

1843 The first fossil of a dinosaur was discovered in England.

1844 The first fossil of a dinosaur was discovered in England.

1845 The first fossil of a dinosaur was discovered in England.

1846 The first fossil of a dinosaur was discovered in England.

1847 The first fossil of a dinosaur was discovered in England.

1848 The first fossil of a dinosaur was discovered in England.

1849 The first fossil of a dinosaur was discovered in England.

1850 The first fossil of a dinosaur was discovered in England.

EARLY IDEAS ABOUT EVOLUTION

How long is a million seconds? Have you been alive for one billion seconds? What was happening a million days ago? We find it very difficult to comprehend these huge numbers. If we don't have a feel for how long a million seconds is, how can we possibly comprehend time spans of millions or billions of years? This is one reason why some people have a problem with evolution. The idea that single, primitive cells evolved into all the species that have ever lived seems incredible, unless you get to grips with the timespans involved.

In ancient Greece, philosopher **Anaximander** suggested that one type of animal could change into another, while **Empedocles** thought that new types of living things could be made from a range of parts that already existed.

There's NO WAY he's getting into elephants on that boat.

Zam, I've got it now later.

The naturalist **George-Louis Leclerc** proposed a way for the Earth to have formed from debris in space. Although he believed in spontaneous generation, he thought that animals could change as they migrated to different conditions. This later explains the discovery of elephant fossils in North America, and mammoth fossils in Siberia, although living elephants are today only found in Africa and South Asia. He suggested the American ones had become extinct, while the mammoths had changed as they migrated south.

I've got it!

Erasmus Darwin was Charles Darwin's grandfather. He was a doctor, poet and naturalist, and in his book *Zoonomia*, or 'The Laws of Organic Life' he was one of the first people to propose a theory of evolution. He never hit on the idea of natural selection, but did recognise the importance of sexual selection (see page 59) and realised it could cause changes in species.

GRADUAL CHANGES

In the early 1800s **Jean-Baptiste Lamarck**, inventor of the terms 'invertebrate' and 'biology', was the first person to develop a coherent theory of the development of life on Earth and its evolution. He believed that life had originated by spontaneous generation, rather than creation by deity, and had then become more complex and varied over many generations. Lamarck suggested how this could happen. His idea is often called the 'Theory of Evolution by Acquired Characteristics'. In simple terms, he thought that the more an animal used an organ during its lifetime, the more well-developed it would become and that these changes could be inherited by offspring if both parents had the same developments.

THE EVOLUTION OF THE GIRAFFE'S NECK, ACCORDING TO LAMARCK:

- 1) Early giraffes had short necks.
- 2) Giraffes reach upward to graze on leaves.
- 3) This stretches their necks very slightly over their lifetimes.
- 4) The next generation of giraffes inherits these slightly longer necks.
- 5) This process is repeated over many generations until we arrive at modern, long-necked giraffes. Lamarck was not suggesting that their necks suddenly shoot out like telescopic poles!

THE PROCESS ALSO WORKED THE OTHER WAY:

- 1) Early penguins had wings with which they could fly.
- 2) Penguins spend most of their time swimming and very little flying.
- 3) Their wings become smaller, with smaller feathers, from lack of flying.
- 4) The next generation of penguins inherits these smaller, more flipper-like wings.
- 5) This process is repeated over many generations until we arrive at the modern penguin, which can no longer fly and whose wings are now adapted to help it swim instead.

Inside Story: How the News Works

Get the inside story on today's most important topics and learn to navigate the news like a pro!

- An all-encompassing, no-nonsense guide to the news industry, looking at how news is made, what and who it's for, what to look out for when digesting news and tips on how to be a savvy news-consumer.
- Written by expert authors from ITN news team, including tips from ITV's Charlene White. Informed by lived experiences of real journalists from across the news sector.
- News from a global perspective: look at key moments in news history and stories that shaped the world from Europe, America, China, Indonesia, India and more.

Inside Story: How the News Works

WHAT IS FAKE NEWS?

The most important thing about fake news is that it's completely untrue. It's made up and often looks like real news. It can be used to trick people and spread lies.

Don't believe the lies!

There are many ways to tell if news is fake. One way is to check the source. Is it a reliable news organization? Another way is to check the date. Is the news recent? You can also check if other news organizations are reporting the same story.

How fake news creates mischief

Fake news can be used to spread lies and cause confusion. It can also be used to influence people's opinions and actions.

Types of fake news

- Clickbait:** Headlines that are designed to get you to click on a website.
- Deepfakes:** Fake videos or audio recordings that look like real news.
- Bot networks:** Groups of fake accounts that spread fake news.

NEWS ALERT
CITRUS NEWS

WELCOME TO THE NEWSROOM

You've probably seen news stories written by a reporter or editor in a newsroom. But what does a newsroom look like? It's a busy place where news is gathered, checked, and then sent out to the public.

Meet our newsreader

Newsreaders are the people who read the news on the radio or TV. They are trained to read clearly and to sound professional. They also have to be able to handle any situation that might arise during a broadcast.

ON ASSIGNMENT

Newsreaders are often on assignment, reporting on news stories from all over the world. They have to be able to travel and to work in different environments.

A newsreader's day behind the scenes

Newsreaders have a busy day. They start by checking the news and then they go to the studio. They have to be ready to go on air at any time. They also have to be able to handle any situation that might arise during a broadcast.

And that's not all...

Newsreaders also have to be able to handle any situation that might arise during a broadcast. They have to be able to work in different environments and to travel to different parts of the world.

WHO'S WHO IN THE NEWS PROCESS

There are many people who work in the news process. Each person has a different role to play. Some people gather news, some people check it, and some people report it.

Editors

Editors are the people who decide what news stories to publish. They have to be able to judge the importance of different stories and to make sure that the news is fair and balanced.

On the road team

On the road teams are the people who gather news from all over the world. They have to be able to travel and to work in different environments.

On the road team

On the road teams are the people who gather news from all over the world. They have to be able to travel and to work in different environments.

Investigative Journalism

Investigative journalism is a type of journalism that looks for hidden stories and exposes wrongdoing. It often takes a long time to gather the information and to write the story.

Journalists

Journalists are the people who gather news and write stories. They have to be able to work in different environments and to travel to different parts of the world.

Different rules for different countries

Every country in the world has its own rules and laws about who can publish news and what they can say. The laws in some countries might be more relaxed than others. Some countries might not treat their news as being important, which is why it's important to know whether the news you're getting is balanced or if it supports a specific point of view.

ASK ME ANYTHING

IS IT ALWAYS WRONG FOR NEWS ORGANISATIONS TO HAVE AN OPINION?

Not necessarily - as long as you know what that opinion is. But this might take a bit of investigating as it's not always obvious. There's a place for opinionated news but it needs to be clear that a report or feature is commenting on a story rather than reporting it.

Making your mind up

Hearing a range of views about a topic can often help you form your own opinions. Sometimes it's easy to know what you think about things. Do you like strawberries? No. Do you think koolas are cute? Yes. Do you like going on holiday? Absolutely!

Other times, questions are more complicated and it's important to have as much information as possible before making your mind up. Is nuclear power good or bad? Should school exams be banned? Should 16-year-olds be allowed to vote?

The news often looks at these trickier questions, so it's essential to know if a news platform has a specific opinion about the issues they're covering. That way you can work out if you're only hearing one side of a story or if you need to look elsewhere to find a balanced view.

It's my way or the highway!

Some news organisations make commitments to produce news that is impartial. Some examples are ITN, the BBC and the Associated Press. These values apply to all their platforms; whether you go to their social media pages, websites or watch them on TV, their content follows the same standards and rules.

But news platforms that aren't impartial can sometimes support the views of the person who owns them. Let's say a news organisation is owned by someone who loves lots of money from selling lemonade. It might not be in its interest to write reports that criticise lemonade, even if they are true. In fact, it could be more likely to report news that shows lemonade in a good light and only criticises other fizzy drinks.

Another big influence on news is politics. Just like the lemonade seller, news platforms might only publish positive news about a political group their owner supports and leave out negative facts and opinions. It's really important to make an informed decision on big topics like this, so it's a good idea to find another platform that reports the other side of the story too, or one that covers both.

CITRUS NEWS

NEWS ALERT

WHAT IS CLICKBAIT?

Clickbait describes a headline that is so outrageous or tempting that it makes you click through to read the whole story. The more clicks or views this content gets, the more money the owner makes from advertisers. They might look like real news stories but a headline about a celebrity that sounds a bit unlikely about trigger a warning to think more deeply about whether the story is true. Think about whether you want those stories to make more money through your clicks!

SCIENTISTS DON'T WANT YOU TO KNOW TIPS ONE VIEWER THINK

FINDING PIE SOUTED

ON ASSIGNMENT
NEWSPAPERS VS. BROADCAST NEWS VS. ONLINE NEWS

Find three versions of the same news story: one from a news organisation you know and trust, one from a news website you don't know and another is a print or online newspaper. Can you work out if they are fair and balanced or whether they have a specific point of view?

Raising the Roof

A cool introduction to classical music

- Broadcaster, songwriter, composer and Scala Radio presenter Jack Pepper is an exciting, young voice in classical music.
- A fun and approachable introduction to classical music
- Includes a playlist, so you can listen as you read
- **SAMPLE CONTENTS:** Hildegard of Bingen 1098-1179; Claudio Monteverdi 1567-1643; Barbara Strozzi 1619-c. 1664; JS Bach 1685-1750; Joseph Bologne 1745-1799; Ludwig van Beethoven 1770-1827; Richard Wagner 1813-1883; Giuseppe Verdi 1813-1901; Ethel Smyth 1858-1944; Arnold Schoenberg, 1874-1951; Igor Stravinsky, 1882-1971; Florence Price, 1887 - 1953; George Gershwin, 1898-1937; Leonard Bernstein, 1918-1990

Raising the Roof

SYMPHONY

The symphony has changed over the centuries, but it is essentially an extended piece of music for a large group of players. The word itself comes from the Greek, meaning 'sounding together'. It is often a composer's lifetime piece because the size and cost of the orchestra is hard to pull off.

A symphony is often in three or four movements, with no set number of measures, and each movement is in its own key. There are two main types of symphony: the classical and the romantic. The classical is usually in three movements, and the romantic is usually in four. The symphony is a genre of music that has been around since the 18th century, and it is still going strong today.

LEARNING TIP
Have a go at writing your own symphony. It's a great way to learn about the structure of a symphony and to develop your own musical ideas.

1800s
The first symphony was written by Joseph Haydn in 1760. It was a single movement in three parts.

1776
Wolfgang Amadeus Mozart wrote his first symphony in 1764. It was a single movement in three parts.

1800s
Ludwig van Beethoven wrote his first symphony in 1793. It was a single movement in three parts.

1800s
Franz Schubert wrote his first symphony in 1811. It was a single movement in three parts.

Present
The symphony is still a popular genre of music today. It is often performed by orchestras and recorded for CD and DVD.

Richard Wagner

1813-1883

To Listen or Not to Listen...
Can we separate opera from Wagner? Or can we say that Wagner was the first to combine music and drama in a way that we still use today? Wagner was a German composer, conductor, and opera theorist. He is best known for his operas, which are often called 'music dramas'. He was a pioneer of the concept of the 'Gesamtkunstwerk', or 'total work of art', in which music, drama, and visual arts are all combined into a single, unified work.

Wagner's Sound
Wagner's music is often described as 'epic' and 'dramatic'. It is full of powerful emotions and is often used to tell a story. His operas are often performed in large, grand opera houses, and they are often accompanied by elaborate stage sets and costumes.

LISTEN!
Listen to Wagner's music and see how it makes you feel. Is it powerful? Is it dramatic? Is it emotional? Write down your thoughts and feelings.

George Gershwin

1898-1937

George Gershwin's Sound
Gershwin was a Jewish-American composer, pianist, and conductor. He is best known for his jazz-influenced music, which often combined elements of classical music and jazz. He was a pioneer of the concept of 'jazz symphony', which is a symphony that is influenced by jazz music.

Piano Addiction
Gershwin was a pianist and a composer. He was a pioneer of the concept of 'jazz symphony', which is a symphony that is influenced by jazz music. He was a pioneer of the concept of 'jazz symphony', which is a symphony that is influenced by jazz music.

LISTEN!
Listen to Gershwin's music and see how it makes you feel. Is it powerful? Is it dramatic? Is it emotional? Write down your thoughts and feelings.

Hildegard of Bingen

1098-1179

Here's someone who was, in every sense, a visionary Hildegard of Bingen had visions of God and wrote them down as poems and music.

Hildegard's Sound
Her music is often monophonic – a single line, a tune on its own (mono means one, phonic means sound). This creates a sense of calm, perfect for a focused, intense contemplation of faith. Hildegard wrote mostly sacred plainchant (where people all sing the same line, with religious texts used for the words), intended for use in church. Her abbey consisted of 50 nuns who all had trained voices and would sing daily. It's believed a Benedictine nun at the time would sing for eight hours each day! With an in-house choir, then, an abbey provided an ideal testing ground for new music. Music becomes a form of prayer, and having everyone sing the same line creates a powerful symbol of togetherness through faith.

Learning by Ear
The Greeks were the first to use letters of the alphabet to represent different notes. Yet until the Middle Ages, almost all music was passed down the generations by mouth, instead of being written down. There was a lot to learn in the 600s, monks in churches are estimated to have memorised 80 hours of music, all by ear! By the 900s, it took around 10 years to teach a young chorister all the pieces they'd need to know for future services. And you think school is intense...

LISTEN!
A Feather on the Breath of God sung by Gothic Voices
Hildegard was a Bible-leaver name even in musical circles, until early music became widely performed and recorded from the 1970s onwards. One of the recordings in this album, released in 1985.

She sent me a letter!
And a botany book to me!
I'm scheduling that next tour!

Celebrate the achievements made in medical engineering and take a glimpse into the future.

- Sample contents: The First Prosthetics, Jack E. Steele - Father of Bionics, Arne Larsson - The First Pacemaker Patient, How Cochlear Implants Work, Eye Replacements, Keith Hayman - The First Bionic Eye, How Bionic Limbs Work, Campbell Aird - The First Prosthetic Arm, Exoskeletons, Neural Implants, The Paralympics, Neil Harbisson - The First Cyborg, Ethics
- Phenomenal artwork by highly acclaimed artist Samuel Rodriguez
- As told by UK Sepsis Ambassador Patrick TJ Kane
- The first of its kind - a book that celebrates the history of medical implantables and prosthetics

New materials have allowed frames for glasses to become lighter and more durable. The colour of lenses has changed too, creating the first purpose-built sunglasses. These work by adding cerium oxide (a type of chemical compound) into the glass to filter out harmful ultraviolet light from the sun. Sunglasses quickly became fashionable, and in 1938, it was reported that 20 million sunglasses had been sold the year before in the US. Interestingly, only a quarter of those people needed sunglasses for medical reasons. This development is an example of a product that was initially designed to benefit a few but ended up benefitting many. It is testament to the importance of innovation within the disabled community.

The latest breakthrough in eyewear has come more recently, with EnChroma® glasses first launching in 2012. These special glasses are designed to help alleviate problems caused by colour-blindness.

People who are colour-blind find it difficult to distinguish between certain colours, such as red and green. EnChroma® glasses use the same principle as cerium oxide in the first sunglasses, but instead of filtering out harmful UV light, EnChroma® glasses filter out the wavelengths of light that get confused by the brain in those people with red-green colour vision deficiency.

World of Sport

In this beautifully illustrated book, learn about the incredible variety of sports that are played around the world.

- A lively, inspiring and fact-filled exploration of a globally unifying topic: sport! From ancient times to today, covering every corner of the world.
- Featuring extensive coverage of women's sports and sporting heroes, plus sports from different, lesser-known regions and cultures around the world.
- Positioned to publish in time for the 2024 Olympic Games.
- With vibrant, energetic illustrations from Violeta Noy, author and illustrator of *The Right One*.

World of Sport

TRACK AND FIELD SPORTS
Track and field sports take place outdoors on a running track. Track events are running competitions and in field events, athletes compete in jumping and throwing events.

JAVELIN
The javelin is a spear-like object used in track and field events. The first javelin was made of wood and iron. It was used in ancient Greece and Rome. The modern javelin was invented in 1880 in Sweden. It is now made of aluminium and has a steel shaft.

LONG JUMP
The long jump is one of the 10 Olympic events. It was introduced by the ancient Greeks. It was used to measure a soldier's strength and to see how far they could throw a spear.

GALINA CHISTAKOVA
Galina Chistakova is a Russian long jumper. She won a gold medal at the 1996 Atlanta Olympics. She is the only woman to have won a gold medal in the long jump.

DISCUS
One of the oldest sports known to man is the discus. It is a flat, circular object that is thrown. It was used in ancient Greece and Rome. The modern discus was invented in 1880 in Sweden. It is now made of aluminium and has a steel shaft.

JAN SZENT
Jan Szent is a Hungarian discus thrower. He won a gold medal at the 1956 Melbourne Olympics. He is the only man to have won a gold medal in the discus.

AMERICAN FOOTBALL
American football is a team sport that is played on a rectangular field. It is the most popular sport in the United States. It was invented in 1862 at a school in Ohio. It is now played all over the world.

AIM OF THE GAME
The aim of the game is to score points by kicking the ball into the opponent's goalposts. The team that scores the most points wins the game.

MEET THE TEAM
There are 11 players on the field. They are the quarterback, running back, wide receiver, tight end, offensive line, defensive line, defensive back, and special teams.

MAKING A PLAY
A play is a set of actions that the players perform on the field. It is usually planned by the coach. The players follow the play to try to score points.

FOR READY
One of the most important parts of the game is the huddle. The players huddle together to discuss the play and to give each other encouragement.

RUGBY
Rugby is a team sport that is played on a rectangular field. It was invented in 1823 at a school in England. It is now played all over the world.

AIM OF THE GAME
The aim of the game is to score points by kicking the ball into the opponent's goalposts. The team that scores the most points wins the game.

MAKING A PLAY
A play is a set of actions that the players perform on the field. It is usually planned by the coach. The players follow the play to try to score points.

BASEBALL
Baseball is a team sport that is played on a diamond-shaped field. It was invented in 1839 in the United States. It is now played all over the world.

AIM OF THE GAME
The aim of the game is to score runs by hitting the ball into the field and running to the bases. The team that scores the most runs wins the game.

CRICKET
Cricket is a team sport that is played on a rectangular field. It was invented in 16th century England. It is now played all over the world.

AIM OF THE GAME
The aim of the game is to score runs by hitting the ball into the field and running to the bases. The team that scores the most runs wins the game.

HOW SPORT BEGAN
People have always enjoyed getting together and competing to find out who's the strongest, fastest or best at something. Humans have been playing sport since ancient times.

WHAT WAS THE FIRST SPORT?
Can you see any ancient cave paintings on the map? We don't know for certain what the world's first sport was, but we can guess from these ancient artworks.

GRAND BEGINNINGS
The first competitive sport we know about was recorded in a famous story, the *Epic of Gilgamesh*, from 2100 BC. In it King Gilgamesh fights a wild man to see who is stronger.

Patata puripatka was played in the ancient Mexican city of Teotihuacan as long ago as 1500 BC. It was a bit like hockey except the ball was on fire!

In chunky, played for centuries by Native Americans, a stone disc was rolled across the ground. Teams throw spears to predict where they thought it would land.

The ancient Mayan ballgame of pitz was invented sometime between 2,000 and 4,500 years ago. Competitors had to get a ball through a stone hoop without using their hands.

Sometimes rival cities settled disagreements with pitz instead of going to war.

Stone pitz hoops can still be seen in ruined Mayan ball courts in South America.

Wall paintings made in caves in Lascaux, France, around 20,000 years ago, seem to show people running and wrestling.

Some ancient Egyptian tomb paintings demonstrate wrestling positions.

The army of ancient Rome played *harpastum*, a dangerous sport a bit like rugby, as a way of training their soldiers.

During the Western Zhou Dynasty (1046-771 BC), archery was part of the education of wealthy men.

Mongolian cave paintings from 5,000 years ago show people wrestling in front of spectators.

In boat jousting, two people in a boat would fight with long poles or 'maces'. Ancient Egyptian carvings show fishermen jousting. They tried to push each other into the river Nile!

Surfing has been popular in the Pacific for hundreds of years. In Hawaii, chiefs competed in fierce competitions, and good surfers could win high social status.

The Māori of New Zealand participated in a competition known as the *Māori Games* - often between neighbouring villages. Men, women and children all competed in canoe races, athletics and martial arts.

World of Food

A colourful celebration of food, farming and dishes from around the world!

- Sample contents: The Beginning of Cuisine; A Roman Banquet; The Vegetable Garden; Fruits and Nuts; A Feast of Fungi; A Cornucopia of Corn; Rice of Life; Where Meat Comes From; Salt and Pepper; Hot Hot Chillies; Chocolate; Sweets Around the World; Festive Foods; Is There Enough Food?
- Featuring more than 100 dishes and food traditions from around the world
- Includes information on sustainability and foods of the future
- Colourful, exuberant illustrations from Violeta Noy bring energy to the pages
- Cover finish: matt lam + spot UV

World of Food

THE BEGINNING OF CUISINE

The very earliest humans hunted animals and gathered wild plants but they had to eat everything else. What people learned how to control fire, however, everything changed. They had learned cooking.

STONE-AGE DIET
The ancestors of modern humans may have used fire to cook meat. It is called game meat. Cooked meat was easier to digest, which made it more nutritious than raw meat. Cooking it also made it easier to store for a long time. In fact, some of the earliest tools found are stone tools for cooking and eating.

OTZI THE CEMAN
One of the earliest tools was made of stone and his body was preserved in the ice. The European Alps. The body was found about 33,000 years ago. It was the first human body ever found and it was the first to be found in a cave. The body was found in a cave.

EARLY FARMING
Cattle, sheep, chickens, goats and pigs were domesticated from about 10,000 years ago. The first people to farm were in the Middle East. They were the first to grow wheat, barley, rice, soy, and other crops.

GROWING CROPS
Agriculture and domestication in many parts of the world, including China, India, West Africa, and the Americas. Early crops included wheat, rice, soy, beans, and other crops.

INVENTING FOR FOOD
Many early technologies were designed to make the gathering, production, preservation, and storage of food easier.

POSSIBLE FOOD
Agriculture and domestication in many parts of the world, including China, India, West Africa, and the Americas. Early crops included wheat, rice, soy, beans, and other crops.

ANCIENT ROMAN BANQUETS

In ancient times, the table, people liked to celebrate with feasts. In Rome, wealthy people enjoyed banquets so much they painted pictures of them on their walls. Archaeologists have found ancient Roman cookbooks and have reconstructed the menus of the food used. At its height, the Roman Empire spanned much of Europe and parts of North Africa and the East. Rome was equipped with food from around the Empire and beyond.

A ROMAN FEAST
Cena was a celebratory meal or banquet. It often had five or six courses, served in a room with a central table. The courses were served by waiters called slaves.

RICH AND POOR
Wealthy Romans may have enjoyed more elaborate food. The food of the poor was simpler and more practical. The food of the poor was simpler and more practical. The food of the poor was simpler and more practical.

NEW FOODS
Other Europeans had used to the Romans. They brought new foods back to their home countries, including wheat, grapes, and other crops.

THE HUMAN FEAST
The human feast was a celebration of the human spirit. It was a time when people came together to share their food and their lives. It was a time when people came together to share their food and their lives.

WHERE FOOD COMES FROM

Fruits, vegetables and other crops don't always originate from the places where they are grown today. Many of the foods we eat every day were first cultivated in just one country or island by thousands of years before they were spread by trade or migration.

TRAVELING APPLES
Some of the first crops that have been brought from Asia to Europe by traders were apples. The first apples were brought from Asia to Europe by traders.

FAR AND WIDE
Some foods have traveled a long way from their home countries. Some foods have traveled a long way from their home countries.

NEW FOODS
Other Europeans had used to the Romans. They brought new foods back to their home countries, including wheat, grapes, and other crops.

SWEET POTATOES
The sweet potato is a member of the Solanaceae family. It was first brought to Europe from the Americas by Spanish explorers.

FOOD CROPS
Some of the first crops that have been brought from Asia to Europe by traders were apples. The first apples were brought from Asia to Europe by traders.

TERRIFIC TUBERS

Some plants develop starchy growths, called tubers, on their roots to store nutrients for winter. Our ancestors quickly discovered that these tubers tasted good and they have been a vital food source for thousands of years.

THE HUMBLE POTATO
Potatoes originate from South America. People in modern-day Peru and Bolivia started growing them by 5000 BCE and possibly as early as 10,000 BCE. In the sixteenth century, Spanish conquistadors introduced potatoes to Europe. At first, Europeans thought the knobby vegetables were poisonous, but they soon discovered that they were easy to grow, filling and could be cooked in lots of different ways.

In the eighteenth century, King Louis XVI of France and his wife, Marie Antoinette, wore potato flowers in their clothes. This encouraged French farmers to grow the new crop.

THE POTATO FAMINE
The humble potato changed the course of history. In the 1840s and 1850s, a disease called blight started to attack potatoes. A mould covered the vegetables with purple spots, making them rot in the fields. In some countries in Europe at this time poor people relied on potatoes for food. The potato famine had a devastating effect, especially in Ireland. Here, one million people died and another million left the country. This migration continued for decades, with four million people leaving the country in the 50 years after the famine.

POTATO DISHES AROUND THE WORLD

Potatoes are very versatile and can be cooked in almost any way. It seems every country has its own favourite dish.

Caissounn (Ireland)
A mixture of mashed potatoes and cabbage.

Gnocchi (Italy)
Potato dumplings that are eaten with a variety of sauces.

Chips and fries
Sliced and deep-fried potatoes are enjoyed around the world.

Gogogeon (Korea)
Fried savory pastiches made with potato or ground potatoes.

Saag aloo (India)
Spiced potatoes with spinach.

Hash browns (USA)
Fried shredded potatoes.

Gratin dauphinois (France)
Thinly sliced potatoes baked in milk or cream.

OTHER TUBERS WE EAT
Potatoes aren't the only tubers we eat. Jerusalem artichokes and dahlias have edible tuberous roots and some other tubers are even more popular than potatoes in parts of the world.

Cassava, also known as manioc or yuca, is a woody, brown tuber. It was originally from South America. Today, it is a staple food for nearly one billion people around the world. Many people cook with tapioca, a starch extracted from the cassava plant.

Yams come from Africa, Asia and the Caribbean. Their long, brown tubers are traditionally boiled or roasted. They can be white, yellow, pink and purple, and can taste sweet or bitter.

Unrelated to the regular potato or the yam, sweet potato is a sweet-tasting tuber full of fibre, vitamins and minerals. It is popular around the world.

Kat-kat manioc is a stew from Mauritius made with green vegetables, beans and cassava.

Yem is a classic base for fufu, a dish made of pounded starchy vegetables. Fufu originates in West Africa and is also found in the Caribbean.

In Korea, gogogeon (roasted sweet potatoes) are baked in big drums by street vendors in winter. They taste sweet and nutty.

Time for Bed, Animals

A gentle non-fiction book full of sleepy animals

- Gentle non-fiction picture book, perfect for readers aged 3-7.
- Written in accessible language, packed with amazing facts and questions to consider, with text by award-winning author and travel-writer Ben Lerwill.
- With lush illustrations full of adorable animals by Spanish illustrator Maribel Lechuga. Maribel has illustrated books for the Usborne Beginners and Look Inside series and Oxford Reading Tree among others.
- A page of information at the back of the book includes sleep-tips for families.
- CONTENTS: Dogs, chimpanzees, dolphins, sea otters, cats, ants, kangaroos, bats, birds, fish (Great Barrier Reef), giraffes, tortoises

Along Came a... Burp!

A laugh-out-loud science storybook all about the human body!

- A fun, fact, and fart-packed picture book approach to early science for readers 4+.
- Graphic-novel-style layouts present facts in memorable and hilarious fashion.
- Paula Bowles's artwork is an explosion of colour, bringing to life a zany cast of anatomical characters, from stinky poos, to friendly farts, to super-speedy sneezes. Paula was shortlisted for the Indie Book Awards 2023 and The Alligators Mouth Award 2023.
- With warm, funny text by rising-star Saskia Gwinn (author of *Scientists are Saving the World* and *I am Not the Easter Bunny*).

Tell Me About: Space

Big science for little readers.

- The third title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at space for young children, featuring topics such as: planets and moons, the solar system, stars and galaxy, constellations, what's in the night sky, gravity, the big bang, going into space and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Big science for little readers.

- The fourth title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at earth science for young children, covering topics such as day and night, seasons and weather, biomes, physical landscapes, the water cycle, volcanoes and earthquakes, fossil fuels, carbon emissions and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Earth is Home

You live on a brilliant ball of spinning rock called Earth. It's a planet, traveling through space on a gigantic loop around a star called the Sun.

There's another ball of rock about a quarter of the size of Earth and you can see it in the night sky. It's called the Moon.

It takes a month for the Moon to travel around Earth on an oval path.

It takes a whole year to travel all the way around the Sun. So if you are five years old, you have circled the Sun five times already!

Earth travels around the Sun on an oval path but it also spins on the spot. The spin is why it gets dark at night.

Your home turns away from the Sun at night and by morning it has turned back towards the Sun once again. It takes 24 hours for a complete spin to happen, and we call that a whole day.

Caves

Caves are big holes carved into cliffs by waves hitting the rock. But they can also form underground as rain trickles through cracks in the rock.

That's right, tiny little rain droplets can make massive caves because they dissolve the rock away a little bit at a time.

Underground rivers flow through caves. They wear the floor of the cave down to make them even bigger.

Inside the cave, some droplets of rainwater evaporate. As the liquid water drops turn into gas, they leave behind the tiny bits of rock they were carrying. The bits of rock stick to the roof.

In a thousand years, all the drops of water will have left enough rock behind to make a shape about as long as your finger. This is called a stalactite.

The same thing happens as the water drops onto the floor of the cave too. The cave floor grows upwards into a wider opening, which is called a stalagmite.

Digging and Drilling

When humans dig useful rocks and metals out of the ground, it is called mining. People also drill long holes deep down into the rock to find little pockets of gas and a liquid called oil.

The oil and gas found deep underground were once tiny sea creatures. They sank to the bottom of the sea and got squashed over millions of years. They turned into a dark liquid called oil and a gas called methane.

Coal is a black rock that gives off lots of heat when it burns. It is made from leaves that took in swamps millions of years ago.

We can burn oil, coal and methane gas to make electricity and to power vehicles.

Most metals are hidden underground with other rocks. A few metals are found just as they are at the surface, including gold, silver and copper.

Metals can make lots of useful things including bikes, phones, computers and cars.

Oceans

If you flew out into space and looked back at Earth it would look blue. That's because two thirds of our planet's surface is covered in liquid water. It's mostly found in the oceans and seas.

Waves

Waves are made on the surface of the water as the wind pushes the sea.

Tides

The sea comes in at high tide and goes out at low tide. This happens twice every day because of the way Earth is spinning beneath the Moon.

That's right, the Moon makes our tides! Gravity is a pull that happens between Earth, the Moon and the Sun. It pulls on you too. When you jump, gravity pulls you back down to Earth.

Low tide

High tide

The oceans on planet Earth slowly change shape because the rock beneath them is moving. This creates underwater valleys, caves and mountains.

Mountain

Valley

Did you know...? Seawater is salty because of salt from rocks!

Tell Me About: The Human Body

Big science for little readers

- The first in a brand-new series of non-fiction books for readers 4+.
- Written in friendly and engaging language by science educator and CBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung
- Cover finishes: matt lam and spot UV
- CONTENTS: Brilliant body; The skin; Skeleton; Muscles, Brain; Thinking; Nervous system; Eyes; Ears; Mouth and Nose; Digestive System; Blood; Water; Pumping blood; Lungs and breathing; Immune system; Feelings; Helping your body

Tell Me About: The Human Body

Brilliant Body

So many amazing things are happening in your body right now! Let's take a look at just a few of them...

As you breathe, spongy bags called lungs are sucking air in and putting it into your blood.

When you run, stretchy cords called muscles pull bones back and forward. Your bones connect together in a structure called a skeleton. And your skin wraps everything up.

Tiny electrical signals are making your heart beat - to-beat-to-beat - to pump blood around your body.

Your body is made from lots of different parts that work together to do important jobs. These parts are called organs.

If you look at the pictures in this book, you're using organs called eyes. And when you think about all of this, you use an organ called the brain.

When you think or laugh or wiggle your toes, you use energy. The energy comes from the food you eat. The food goes into your blood and all around your body.

The Skin

Let's begin our body tour with your skin. This stretchy waterproof layer wraps around your body keeping germs out and keeping your insides... inside!

Your skin is full of sensors that help you to touch and feel things. You can feel pain and warmth and the tiny footpads of an insect crawling on your arm.

Did you know...? The skin is the biggest organ in the body!

Touch sensors help you to feel how hard to press when you lift it and hold objects - so you don't drop or squash them.

The top layer of your skin is dead! Underneath it, new skin is being made. It pushes the old skin upwards until it flakes off as dust. Yes, your skin becomes dust!

Your hair and nails are made from the same stuff as skin. It's called keratin.

Your skin cools your body too. One way it does this is by making little drops of liquid called sweat.

When sweat drops are warmed by a hot body, they float off into the air taking heat away with them!

Skeleton

The thing that gives your body its wonderful shape and height is a skeleton. It is made from 206 bones that join together at hinges called joints.

Full your fingers! The bones are the hard parts, and the joints are where your fingers bend.

Strong bony bones called cartilage make up some parts of the skeleton including your ears, your nose and sections of your ribs.

The skeleton protects your insides too. Your ribs make a cage around your lungs and heart and your skull is like a helmet, protecting your brain.

Inside your biggest bones is a juice called marrow. New blood is being made in the marrow. That's right, your bones can make blood!

Bones are full of tiny holes that make them light. But the pattern of the holes makes them really strong too.

Short stretchy cords called ligaments stick the bones to each other. Longer, stretchy cords called muscles pull the bones around so you can move.

Muscles

Muscles are stretchy cords that pull body parts to make them move. If you wiggle your eyebrows and stick out your tongue, you did it using muscles!

Muscles can pull, but they can't push so they need to work in teams. One muscle pulls a body part one way, and another muscle pulls it back again.

Great teamwork muscles!

1. Bend your arm. The set of muscles at the front of your arm, called triceps, pulled it up by getting shorter.

2. Now straighten your arm. Another set of muscles at the back of your arm, called biceps, pulled your arm down to straighten it.

The muscles that move your bones around are called skeletal muscles. But they're not the only muscles you have!

Skeletal muscles help you to move parts of your body.

Cardiac muscles make your heart squash to pump blood.

Smooth muscles line the tubes in your body. They help push things through the tubes.

Did you know...? Muscles help you hold in pee until you're ready to let it go.

Little Explorers: Food

Take a bite into the tasty world of food, with more than 30 flaps to lift and explore!

- More than 30 sturdy flaps to lift reveal interesting and fun facts, helping kids engage with the topic.
- A popular non-fiction series that relates non-fiction facts in a fun and entertaining manner, the *Little Explorers* series has sold over 1.25 million copies worldwide.
- Introduces new concepts and vocabulary in a simple and accessible way.
- With bright and child-friendly artwork that complements the conversational text.

Little Explorers: Food

FOOD AND YOU

If you ate the same food every day, it could get pretty boring. Food is usually the best for you. Different types of food to stay healthy.

Healthy and Vegetables
 Try to drink water every day.

Starch
 Starchy foods give you energy. They are found in bread, pasta, rice, potatoes, and cereals.

Protein
 Protein helps you grow. It is found in meat, fish, eggs, and beans.

Different Diets
 People across the world eat different kinds of food. This is called their diet. There are many different types of diets.

Did you know?
 Humans are omnivores. This means we can eat both plants and animals. We are called omnivores because we eat both.

Herbivores
 Herbivores eat only plants. They are found in many places, like cows, sheep, and rabbits.

Vegetarian
 Vegetarians eat only plants. They do not eat meat. There are many different types of vegetarian diets.

Flexitarian
 Flexitarians eat mostly plants but also eat some meat. They are becoming more popular.

Raw Food
 Raw food diets focus on eating uncooked, whole foods. They are not recommended for children.

FOOD THROUGH TIME

In human's early days, humans ate what they could find in the wild. Over time, they learned to farm and domesticate animals. Food and how we eat it has changed a lot over time.

1000 BC
 The first people to farm were in Mesopotamia. They grew wheat and barley and raised animals like sheep and cows.

500 BC
 The Greeks and Romans ate a lot of bread, olives, and wine. They also ate fish and vegetables.

1000 AD
 The Vikings ate a lot of fish, meat, and dairy. They also ate bread and vegetables.

1500 AD
 The Spanish brought potatoes to Europe. Potatoes became a very important food source.

1800 AD
 The Industrial Revolution changed how food was produced. Factories started making processed foods.

1900 AD
 The first frozen foods were invented. This allowed people to eat fresh-tasting food all year long.

2000 AD
 The internet and social media have changed how we eat. People now have access to food from all over the world.

2024 AD
 Today, we have a lot of different types of food. We can eat food from all over the world and have it delivered to our door.

FINDING FOOD

Where does food come from? It comes from many different places. Some food comes from the land, some from the sea, and some from the sky.

Harvesting
 Harvesting is the process of gathering crops from the fields. It is a very important part of food production.

Tractor
 Tractors are used to help farmers with their work. They can plow the fields and pull heavy loads.

Combine Harvester
 Combine harvesters are used to harvest crops like wheat and corn. They can do the work of several different machines.

Stocking
 Stocking is the process of putting food into storage. This allows farmers to keep their food for a long time.

Factory
 Food factories are used to process food. They can make a lot of food very quickly and efficiently.

Truck
 Trucks are used to transport food from the farm to the store. They are very important for getting food to where it needs to go.

FABULOUS FOOD!

Food can be yummy in your tummy, but what is it really? Food is your body's fuel. It is the energy that helps you move, think, and play. When you run out of fuel, you need to fill up! We all need food to live.

Nutrients
 Nutrients are important things found in food. Your body needs them to grow and survive. Nutrients can be vitamins, minerals, carbohydrates, proteins, fats, and water.

VITAMINS
 Vitamins help your body work as it should. There are 13 known vitamins and they all have different jobs. Vitamin C is in fruits such as oranges. It helps keep you healthy.

MINERALS
 Minerals are a bit like vitamins. They help the body work well. Iron is an important mineral found in meat and spinach.

CARBOHYDRATES
 This is where a lot of your energy comes from. The body breaks down carbohydrates into a substance called glucose, which acts as fuel. Carbohydrates are found in foods such as whole grains and potatoes.

PROTEINS
 Proteins are like building blocks that help your body grow. They can be found in eggs and beans.

FATS
 Fats can provide energy and help the body absorb important vitamins. Healthy fats can be found in foods such as nuts and fish.

THE DIGESTION QUESTION
 How does the food you eat turn into energy inside your body? And where does it go? This process is called digestion. Together, the parts of your body that help break down and use food are called the digestive system.

Mouth
 This is where it all starts. You take a bite and crush up food with your strong teeth. Munch, crunch, munch!

Desophagus
 Food travels down, down down the tube.

Stomach
 The stomach stores food, mixing it with acid and enzymes.

Intestines
 The sticky liquid moves through the intestines. Nutrients are absorbed into the bloodstream and taken to other parts of the body.

Desophagus
 Mouth

Stomach
 Small intestine

Large intestine

Art is Everywhere

A playful introduction to art history.

- Growing demand for children's art books that aren't biography or activity
- Fresh, inspiring take on a strong topic
- Highly accessible angle - discusses ideas and techniques that can be applied to art anywhere and everywhere
- Author is a knowledgeable art historian with a witty, unique tone, and years of experience with leading art workshops for children
- Both UK and international sales have seen demand for more 'art' titles. A great opportunity for us to show support for suffering creative arts scene and fill a gap on our list.
- Subjects covered - Why Do we Make Art?, Brush Strokes, Patterns, The Power of Colour, Art Can be Anything, Symbols

This visually extraordinary book presents the history of medicine as it has never been seen before.

- Sample contents: The History of Medicine, Learning from the Past, Ancient Beliefs, Mental Health, How Medicines Work, Opening Up the Body, The Power of Plants, Malaria Medicines, Making Medicines, Poisons, Hospitals Through History, Early Surgery, Cholera, Plagues and Pandemics, Vaccination, D.I.Y. Medicine, Transplants, Prosthetics
- Expertly written by curator, lecturer and historian, Briony Hudson
- Striking artwork from Aquila artist Nick Taylor is sure to make this title stand out from the crowd
- Perfect for students but also the ideal gift book for general interest readers

Pub Date	18/08/2022

The Extraordinary Elements

This lively periodic table book presents the extraordinary elements as you've never seen them before.

- Easy-to-access, visual information
- Fun characters help commit scientific facts to memory
- Lightweight and pocket-sized - ideal portable format
- Perfect for KS3 students or general interest readers
- Matt lam, 100% spot UV and deboss cover treatments

The Extraordinary Elements

CHLORINE

STATE AT 20°C
A yellow-green gas with a strong, pungent odour.

WHERE ON EARTH?
Found in seawater and in the form of chlorides in rocks.

DANGER TO LIFE
No known biological role. It is toxic and highly corrosive.

SPECIAL USES
Disinfectant, bleach, and in the production of plastics.

DISCOVERED IN 1774

ALPHA RADIATION
None

BETA RADIATION
None

ATOMIC MASS
35.45

ARGON

STATE AT 20°C
A colourless, odourless gas.

WHERE ON EARTH?
Found in the Earth's atmosphere.

DANGER TO LIFE
No known biological role. It is inert.

SPECIAL USES
Used in light bulbs, welding, and in the production of stainless steel.

DISCOVERED IN 1868

ALPHA RADIATION
None

BETA RADIATION
None

ATOMIC MASS
39.95

ASTATINE

STATE AT 20°C
A radioactive element that is extremely rare and unstable.

WHERE ON EARTH?
Found in trace amounts in uranium and thorium ores.

DANGER TO LIFE
No known biological role. It is highly radioactive.

SPECIAL USES
None.

DISCOVERED IN 1940

ALPHA RADIATION
High

BETA RADIATION
Low

ATOMIC MASS
210

RADON

STATE AT 20°C
A radioactive element that is extremely rare and unstable.

WHERE ON EARTH?
Found in trace amounts in uranium and thorium ores.

DANGER TO LIFE
No known biological role. It is highly radioactive.

SPECIAL USES
None.

DISCOVERED IN 1898

ALPHA RADIATION
High

BETA RADIATION
Low

ATOMIC MASS
222

ACTINIUM

STATE AT 20°C
A soft, silvery-white metal which glows blue in the dark.

WHERE ON EARTH?
Found in uranium ores.

DANGER TO LIFE
No known biological role. It is radioactive and highly toxic.

SPECIAL USES
Limited use outside of research.

DISCOVERED IN 1899

ALPHA RADIATION
High

BETA RADIATION
Low

ATOMIC MASS
227

THORIUM

STATE AT 20°C
A silvery, radioactive metal.

WHERE ON EARTH?
Found in the minerals thorite, thorianite and monazite.

DANGER TO LIFE
No known biological role. It is radioactive and highly toxic.

SPECIAL USES
Nuclear power, high-quality camera lenses.

DISCOVERED IN 1829

ALPHA RADIATION
High

BETA RADIATION
Low

ATOMIC MASS
232.038

Small Worlds: Earth

This beautiful lift-the-flap book lets children explore small worlds in nature close-up.

- A nature series illustrated by Lara Hawthorne, author and illustrator of *The Night Flower* and *Alba the Hundred Year Old Fish*
- a hands-on exploration of how small areas in the natural world act as habitats to a wide range of plant and animal life.
- Part of a two book series which includes *Small Worlds Earth* and *Small Worlds Water*.
- More than 70 flaps inside
- Lara Hawthorne was nominated for the CILIP Kate Greenaway Award and shortlisted the AOI's World Illustration Award for *The Night Flower*.

Against the Odds

Meet the adventurers who have tried, failed and succeeded against the odds!

- *Alastair Humphreys's Great Adventurers* won the Stanford Travel and Teach Primary Book awards and has sold over 45,000 copies worldwide (as of July 2022)
- Sample contents: , Junko Tabei, Juanita Harrison, Ffyona Campbell, Bernard Moitessier, Goran Kropp, Terry Fox, Matthew Henson, Frank Wild, Joe Simpson, Jack Swigert, Jeanne Baret, Robert Smalls, Zheng He, Emile Leray , Karen Darke, Beth French and Marianne Du Toit.
- Author Alastair Humphreys - National Geographic Adventurer of the Year 2012 - has hand-selected 20 inspiring adventurers and retold their stories in his own words

Against the Odds

JEANNE BARET

Small text describing the story of Jeanne Baret, a French explorer who traveled to the Americas.

INTO THE WILDERNESS

A MAN IN DISGUISE

Small text describing her journey and the challenges she faced.

A CLEVER DISGUISE

Small text describing the story of a man in disguise.

A NEW LIFE

Small text describing the man's new life.

Was Robert Smith's legend?

Small text discussing the legend of Robert Smith.

JUNKO Tabei

Small text describing the story of Junko Tabei, a Japanese mountaineer.

Small text describing her achievements and the challenges she faced.

ROBERT SMALLS

Robert Smalls was born into slavery in 18th-century America, deep in the South. He was desperate for his family to escape to a better life. But the outbreak of the American Civil War seemed certain to end his hopes of freedom and safety.

As a child, Robert Smalls worked as an enslaved cotton picker on a plantation.

When he was 12, he was sent to Charleston as a labourer, working in a hotel and then as a lamplighter.

As a teen, he worked on the docks. He got to know the ships well and became a helmsman, in charge of steering the boat.

At 17, Robert got married and was desperate to buy his family's freedom. But for every \$15 he earned as an enslaved man, he was only allowed to keep a single dollar. This made it impossible to save the \$800 he needed. Robert was trapped, as his people had been for centuries, and he knew that if he wanted to be free, he would need to come up with a spectacular plan.

US CIVIL WAR 1861 - 1865

DREAMS OF FREEDOM

The American Civil War began in 1861 between the Southern States (the Confederacy) who wanted to keep slavery, and the Northern States (the Union) who did not.

In 1861, Robert was forced into service on a transport ship for the Confederate Army called the CSS Planter, delivering ammunition and supplies up and down the coast. The ship was led by Captain Bevela, with two other white officers and a crew of enslaved Black men.

The captain always wore a wide-brimmed straw hat to protect his head from the bright southern sun. This gave Robert the first glimmering of an idea...

Talking History

150 years of world-changing speeches

- An accessible look at political and social history, and issues that remain pertinent today
- Contemporary design and illustrations from André Ducci accompany engaging text
- Authors are experienced children's writers and academics with expert knowledge on the topics discussed. In 2021, Joan Haig was selected as one of prestigious Scottish Book Trust's authors in residence, working with a school in Aberdeen
- Sample contents: Abraham Lincoln, 'The Gettysburg Address', 1863; Jawaharlal Nehru, 'A Tryst with Destiny', 1947; Nelson Mandela, 'Speech from the Dock', 1964; Harvey Milk, 'The Hope Speech', 1978; Angela Merkel, 'Address to 68th Session of the WHO', 2015 and Severn Cullis-Suzuki, 'Listen to the Children', 1992,

Talking History

In 1903, in the city of Manchester, UK, Emmeline Pankhurst and her eldest daughter Christabel founded the Women's Social and Political Union (WSPU). The organisation campaigned fearlessly for women's right to vote.

THE SUFFRAGETTE MOVEMENT

This wasn't the first time that women in Britain had fought for the vote. Since the mid-nineteenth century, female campaigners called 'suffragists' had tried to win rights for women in society through peaceful petitions and, later on, by refusing to pay their taxes.

But this campaign was slow with few results. After years of unsuccessful peaceful protest by the suffragists, the WSPU decided that it was time for action - 'Deeds Not Words', as their motto said. Members of the WSPU took part in 'civil disobedience' to literally fight for their cause. They chained themselves to railings, heckled politicians, placed bombs in empty buildings, and smashed windows in public places, constantly clashing with the authorities.

They were so determined to achieve their political aims that they deliberately took part in violence and vandalism to influence the public and the government.

Newspapers began referring to militant WSPU campaigners as 'suffragettes'. By 1910, the WSPU had branches all over the country.

THE CAT AND MOUSE ACT

Around 1,000 suffragettes were imprisoned for their 'substance' behaviour. While in jail, some continued to fight by going on hunger strikes, refusing to eat or drink. At first, they were released to prevent them from starving, but, by 1910, prison wardens began to force feed them. Women were badly hurt, prompting public outrage at what was seen as government torture.

The government responded by passing the 1913 'Prisoners' (Temporary Discharge for Ill Health) Act. Under this new law, when women on hunger strike became critically weak, they were sent home. As soon as they recovered, they were promptly returned to continue their sentence. It was dubbed the 'Cat and Mouse Act' because of the way a cat plays with its prey repeatedly letting it escape before catching it again.

Emmeline Pankhurst was imprisoned and released 16 times! It was in 1913, in between prison sentences, that she visited the United States to campaign for support and funding. She addressed a group of women at the Parsons Theatre in Hartford, Connecticut, in a powerful speech attempting to justify the use of militant tactics in the fight for women's rights.

Anthology of Amazing Women

The awe-inspiring stories of 50 women from all around the world.

- Over 31,000 copies sold worldwide (as of September 2022)
- An inspiring introduction to women's history.
- The stories of 50 diverse women from all over the world.
- Quirky illustrations of all the amazing women and key objects from their amazing lives and careers.

Anthology of Amazing Women

WOMEN IN ART & DESIGN

Who knows who made the first painting? People always assume that was "him" but just don't know, and most of these probably happened on earth as we know it.

Although the age women have made art, even when they weren't supposed to, and sometimes when they were told not to. They often are overlooked, although artists. They provide about 90% of the world's art. Most of the art we see today is by women. Most of the art we see today is by women. Most of the art we see today is by women.

ARTEMISIA GENTILESCHI
Italy
One of the most accomplished painters of her time, Artemisia was a student of her father's, the artist Giovanni Battista. She painted about 100 portraits and religious scenes. She was the first woman to be elected a member of the Accademia di San Luca in Rome.

OKI KATSUSHIKA
Japan
She is famous for her beautiful and colorful woodblock prints. She was the first woman to be elected a member of the Royal Academy of Arts in London.

MARY CASSATT
USA
She was one of the most important American Impressionist painters. She was the first woman to be elected a member of the National Academy of Design in New York.

YOKO ONO
Japan
She has been a leading figure in the Japanese avant-garde art movement. She was the first woman to be elected a member of the Japanese Academy of Art.

LEE MILLER

Lee Miller was a pioneer in the field of photography. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

She was a pioneer in the field of photography. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

GEORGIA O'KEEFE

Georgia O'Keeffe was a pioneer in the field of photography. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

She was a pioneer in the field of photography. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

FRIDA KAHLO

Frída celebrated her South American heritage by wearing traditional Tehuana dresses. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

She was a pioneer in the field of photography. She was the first woman to be elected a member of the Royal Society of Photography in London. She was also the first woman to be elected a member of the Royal Society of Arts in London.

FRIDA KAHLO

Frída Kahlo is one of the most recognizable artists of the twentieth century, not least because of her 143 paintings, 55 are self-portraits. "I am so often alone", she once said, "and I am the subject I know best."

Frída was born in 1907 in Coyocacán, a suburb of Mexico City. In 1925 she was nearly killed in a horrific bus crash. She suffered multiple fractures to her spine, collarbone, ribs, pelvis, and shoulder. From that day on, Frída was in constant pain and would endure over thirty operations in her short life. While in the hospital, Frída's father gave her some paints. Her mother made her a special easel so she could work lying down and rigged up a mirror so she had a subject - herself. In art, Frída found her voice, a way of expressing her psychological and physical wounds. She used symbolism to describe her distress: perhaps scissors, surrounded by her own fallen hair, or a broken heart lying at her feet. In other work she depicts herself more than once, showing different aspects of her personality. Some were shocked at the frankness with which she bared her soul; most found it exhilarating.

Oddly, during her lifetime, Frída was often talked of as the wife of the famous mural artist Diego Rivera. Today, he is remembered as Frída's husband! Their relationship was stormy and passionate. They once even divorced but remarried a year later. Everything she felt and experienced was poured into her work. The torment of her broken body after the bus crash became a painting called *The Broken Column*, referring to her own spine. Frída partly wore her colourful, embroidered Tehuana dresses to disguise her limp, but traditional attire was also a way of exploring her place in the history of South America.

Her first solo exhibition, in New York, 1935, was a huge success, and the Louvre in Paris bought one of her paintings the year after. Frída was internationally famous. She became a professor at La Esmeralda school of art but by now she was so sick she had to hold classes at home. She attended the opening of her first and only solo exhibition in Mexico in her bed.

Against the advice of her doctors, Frída, who had always been politically active, attended a demonstration, weakening her beyond repair. She died in 1954, in the house in which she had been born.

"They thought I was a surrealist but I wasn't. I never painted dreams, I painted my own reality."
