Art of Protest

Discover the power of words, images and much more in this analytical and thought-provoking look at protest art.

- Stunning artwork by contemporary artists around the world
- As told by TED talker, activist, lecturer and artist De Nichols
- De's *Mirror Casket* project was commended by legendary activist Angela Davis in Smithsonian Magazine.
- **WINNER OF THE BRITISH BOOK DESIGN & PRODUCTION AWARDS IN THE CHILDREN'S TRADE 9 TO 16 CATEGORY!**
- **WINNER OF THE 2023 BOLOGNA RAGAZZI AWARD!**
- Uncoated and fluoro pantone cover treatments with flaps.

Art of Protest

Protest art often makes use of symbols, which can quickly convey powerful meaning.

SYMBOLISM

Paper Cranes

In Japan, it is believed that someone who folds 1,000 origami cranes will be granted a wish. In 1945, two-year-old Sadako Sasaki was in the vicinity of the atomic bomb dropped on Hiroshima. She suffered long-term effects from that exposure, including developing leukaemia. Before she died at the age of 12, Sadako folded more than 1,000 cranes, and the paper crane went on to become a symbol of peace.

The Peace Sign

The peace sign was created by the British artist Gerald Holtom in 1958 as the logo for a campaign for nuclear disarmament in the UK. It has since become an iconic symbol of calls for peace.

Umbrellas

During protests for democracy in Hong Kong in 2014, activists used umbrellas as shields against tear gas and other aggressions by the police. The umbrellas came to symbolize the protests and gave the movement its name (read more on pages 52–53).

The Clenched Fist

The image of an upraised clenched fist is a powerful symbol of protest and resistance. Some of its first uses were by labour unions in the early 1900s, before it grew in popularity and became a symbol of many causes, including Black Power, the anti-apartheid movement and the feminist movement.

The Rainbow

The rainbow is the most iconic symbol of the LGBTQ+ movement. It represents diversity, acceptance and the spectrum of human sexualities and genders.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

On the hot day of August 18th, 1791, a Frenchman named Nicolas Appert was in the kitchen of a Parisian hotel. He was looking for a way to preserve food for the army. He decided to try making ice cream. He used milk, sugar, and vanilla. He put it in a glass jar and sealed it. He then put it in a pot of boiling water. The ice cream was perfect. It was the first ice cream ever made. Appert's invention was a big success. It was the first of many inventions that would change the world.

Easy Ice Cream

Put 1 cup of milk, 1/2 cup of sugar, and 1/4 cup of vanilla in a glass jar. Seal the jar. Put it in a pot of boiling water. Boil for 1 hour. The ice cream is ready to eat.

Bicycle

"Freedom on two wheels"

15

Did you know that the first bicycle was called a 'boneshaker'? It was made of wood and had a very rough ride. The first bicycle was invented in 1817 by a German man named Baron von Drais. He called it a 'velocipede'. It was a simple machine with two wheels of the same size. It was used for racing. The bicycle was a big success. It was the first of many inventions that would change the world.

Petition Penny-Farthing

It was a bit of a design, much up on the coast. Penny-Farthing was a bicycle with a large front wheel and a small rear wheel. It was used for racing. The bicycle was a big success. It was the first of many inventions that would change the world.

Camera

"Tag along"

24

Although it was not an invention, it was a big success. The camera was invented in 1816 by a French man named Nicéphore Niépce. He called it a 'chambre noire'. It was a simple machine with a lens and a box. It was used for taking pictures. The camera was a big success. It was the first of many inventions that would change the world.

Developed to Perfection

The camera was a big success. It was the first of many inventions that would change the world.

High-Speed Train

"10-speed"

25

By the 19th century, the world was full of steam trains. They were used for transporting goods and people. The first high-speed train was invented in 1904 by a French man named Gaston de Paradié. He called it a 'TGV'. It was a simple machine with a long body and a small engine. It was used for high-speed travel. The high-speed train was a big success. It was the first of many inventions that would change the world.

Marvellous Maglevs

The high-speed train was a big success. It was the first of many inventions that would change the world.

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine on a hill. It is a machine that uses the power of the wind to generate electricity. The first wind turbine was invented in 1890 by a Danish man named Poul la Cour. He called it a 'Vindmølle'. It was a simple machine with three blades. It was used for generating electricity. The wind turbine was a big success. It was the first of many inventions that would change the world.

Green Energy

The wind turbine was a big success. It was the first of many inventions that would change the world.

Helicopter

"A sailing way to fly"

35

What if you could fly? The helicopter was invented in 1907 by a French man named Paul Corbière. He called it a 'hélicoptère'. It was a simple machine with two rotors. It was used for flying. The helicopter was a big success. It was the first of many inventions that would change the world.

Versatile VTOLs

The helicopter was a big success. It was the first of many inventions that would change the world.

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no carts, cars, bikes, buses, trucks, trains, or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3500 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips"

18

The invention of the Internet—a network of computers that 'speak' to each other—was a concentrated effort in the United States. The first computers were connected to each other in 1969, but scientists first began developing the Internet in the early 1970s during the Cold War (1947–1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: LOGIN, but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want—books, food, holidays, cars—with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.
