

Frontlist Titles Bologna 2024

I'm a Dinosaur

A dinky shaped board book packed with dinosaurs.

- 7 uniquely shaped spreads full of playful shapes to trace give this book a fun, toy-like quality.
- Bursting with brightly coloured, friendly characters illustrated by Matthew Scott
- Each spread features a first dinosaur fact - perfect for toddlers who are interested in dinosaurs, but still too young for longer non-fiction
- Full of sounds to join in with... ROAR!
- A sturdy board book that can be given to the youngest of babies
- Also in the series: I'M A CAR
- CONTENTS: T.rex, Parasaurolophus, Diplodocus, Pterodactyl, Triceratops, Plesiosaurus, Stegosaurus

Match the Colour

A first words book that's also a shape-sorter!

- An innovative board book design that lets toddlers place three chunky shapes into matching slots. Three shapes attach to the book via ribbon and feature 6 bright colours.
- A die-cut in the cover showcases the novelty and keeps the pieces securely in place when the book is shelved.
- Matching the colours aids children in their fine motor skills, hand-eye co-ordination and problem-solving skills.
- Introduces familiar first words on every spread.
- Illustrated in vivid colour and effortless style by Polish artist Susie Hammer.
- Also in the series: Match the Shape (2025).

Jane Foster's Baby's First Stories: 0-3 months

A series that grows with your baby

- Written in consultation with Early Years Expert, Lizzie Noble, each book perfectly suits your baby's needs at every stage of their first year
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books usually have little text. Reading aloud soothes babies from birth, promotes baby-carer bonding, builds children's language skills, and increases the chances that parents will continue to read to babies as they grow older
- Perfect for parents who use the Wonder Weeks App, read Your Baby Week by Week, or use milestone cards to mark big moments
- 4 books in the series, all featuring the same animal characters: 0-3 months; 3-6 months; 6-9 months; 9-12 months

Jane Foster's Baby's First Stories: 0-3 months

Pub Date	03/08/2023

Jane Foster's Baby's First Stories: 6-9 months

A series that grows with your baby

- Written in consultation with Early Years Expert, Lizzie Noble
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books often have little text. Reading aloud soothes babies, promotes bonding, builds language skills, and increases the chance that parents will read to babies as they grow older. *6-9 months* has black, white, red and blue art, as from 6 months, babies can see most colours. The story relates to routines, to reflect little ones starting to wean, and settling into more regular patterns.
- Perfect for parents who use the Wonder Weeks App, read *Your Baby Week by Week*, or use milestone cards to mark big moments

Jane Foster's Baby's First Stories: 6-9 months

Bunny's Lunch Time

It's lunch time, Little Bunny,
Let's clean your paws and face.
Here's your spoon and here's your bib
And here's your bunny plate!

Jane Foster's Baby's First Stories: 9-12 months

A beautifully illustrated series that grows with your baby.

- Written in consultation with Early Years Expert, Lizzie Noble
- Fills a gap in the market: parents are told to read to their baby every day, but black and white books often have little text. Reading aloud soothes babies, promotes bonding, builds language skills, and increases the chance that parents will read to babies as they grow older. *9-12 months* has black, white, red, blue and yellow art, as babies' eyesight becomes more like our own. The stories introduce questions and spotting elements for older babies who can notice small details and respond to basic questions.
- Perfect for parents who use the Wonder Weeks App, read *Your Baby Week by Week*, or use milestone cards to mark big moments

Jane Foster's Baby's First Stories: 9–12 months

Baby Steps: Move Like Me

Slide the tab, copy the action!

- Illustrated by London-born illustrator, Richard Merritt.
- A simple rhyming text is fun to read aloud and easy for little ones to join in with.
- With 9 sliders to pull and push to make the animals on every page move about.
- This book will help little ones learn to name body parts and follow simple instructions.
- Moving the sliders helps children develop fine motor skills; copying the actions builds gross motor skills.
- Featuring S&BÂ®'s innovative anti-bacterial finish on all pages: 100% natural, plant based and sustainable, offering 99.99% germ control including covid 19, MRSA, E-coli, mold and yeast. This green formulation is safe for babies and contains no microplastics.

- Introduces new concepts and vocabulary in a simple and accessible way.
- With bright and child-friendly artwork that complements the conversational text.

Little Explorers: Food

FOOD AND YOU

If you ate the same food every day, it could get pretty boring. Food is usually the best part of your diet. To make a mix of different types of food is the healthiest.

Healthy and Vegetables

Starch

Protein

Sugars

DIFFERENT DIETS
 People across the world eat different kinds of food as part of their normal diet. This is called their diet. There are all sorts of different diets. Here are just a few of them.

Vegetarian
 Vegetarians follow a diet that does not include any meat or fish. (Veggie burger!)

Flexitarian
 A vegetarian diet that allows for some meat or fish once in a while.

Other diets shown: Vegan, Omnivore, Pescatarian, and a 'Did you know?' box about monks and their diet.

FOOD THROUGH TIME

In human's early days, humans ate what they could find in the wild. Over time, they learned to farm. It is now a more varied diet. The food we eat now is much different. Meat and fish are now much easier to come by.

1500 BC
 The Chinese began to use iron tools. This allowed them to dig up iron ore and use it to make iron tools. Iron tools were used to make iron plows and other farming tools.

1000 BC
 The Phoenicians were the first to use the wheel. They used it to make wheels for their chariots and ships. This made it easier to transport goods.

1000 AD
 The Crusades were a series of wars between Christians and Muslims. This led to the spread of new foods and ideas.

1500 AD
 The printing press was invented. This allowed people to print books more easily. This led to the spread of new ideas.

1800 AD
 The Industrial Revolution began. This led to the development of new machines and factories. This made it easier to produce food.

1900 AD
 The automobile was invented. This made it easier to transport goods and people. This led to the development of new food products.

2000 AD
 The internet was invented. This led to the development of new food products and services.

2020 AD
 The world is now a global village. This means that we can now get food from all over the world.

FINDING FOOD

Usually, food appears in front of you at the dinner table. But how did it make its way there? Here are some of the ways that food gets to your plate.

Harvesting Farms
 A farmer grows crops on a farm. The crops are harvested and taken to a factory to be processed.

Combine Harvester
 A combine harvester is a machine that can harvest crops. It can cut, thresh, and clean the grain.

Tractor
 A tractor is a machine used for agriculture. It can pull plows, harrows, and other farming equipment.

Factory
 A factory is a building where goods are made. Food is processed in a factory and then packaged for sale.

Store
 A store is a place where goods are sold. Food is sold in a store and then taken home by the consumer.

In the garden
 Some food grows in a garden. People can grow their own vegetables, such as tomatoes and beans, in a garden.

Busy bees
 Bees are important for the food we eat. They help to pollinate flowers, which leads to the production of food.

FABULOUS FOOD!

Food can be yummy in your tummy, but what is it really? Food is your body's fuel. It is the energy that helps you move, think, and play. When you run out of fuel, you need to fill up! We all need food to live.

Nutrients
 Nutrients are important things found in food. Your body needs them to grow and survive. Nutrients can be vitamins, minerals, carbohydrates, proteins, fats, and water.

VITAMINS
 Vitamins help your body work as it should. There are 13 known vitamins and they all have different jobs. Vitamin C is in fruits such as oranges. It helps keep you healthy.

MINERALS
 Minerals are a bit like vitamins. They help the body work well. Iron is an important mineral found in meat and spinach.

CARBOHYDRATES
 This is where a lot of your energy comes from. The body breaks down carbohydrates into a substance called glucose, which acts as fuel. Carbohydrates are found in foods such as whole grains and potatoes.

PROTEINS
 Proteins are like building blocks that help your body grow. They can be found in eggs and beans.

FATS
 Fats can provide energy and help the body absorb important vitamins. Healthy fats can be found in foods such as nuts and fish.

THE DIGESTION QUESTION
 How does the food you eat turn into energy inside your body? And where does it go? This process is called digestion. Together, the parts of your body that help break down and use food are called the digestive system.

Mouth
 This is where it all starts. You take a bite and crush up food with your strong teeth. Munch, crunch, munch!

Desophagus
 Food travels down, down down the tube.

Stomach
 The stomach stores food, mixing it with acid and enzymes.

Intestines
 The sticky liquid moves through the intestines. Nutrients are absorbed into the bloodstream and taken to other parts of the body.

Other parts labeled: Mouth, Desophagus, Stomach, Small intestine, Large intestine.

Character: A boy says "I'm hungry!" and a girl says "GROWL!"

Oh No, Flo!

A fantastically funny farmyard fiasco to read aloud!

- Taking recognisable and familiar farm animal characters to create a funny and fresh picture book for the very young.
- Featuring bold and bright illustrations from Mike Byrne, well-known for *This Book is Full of Unicorns*.
- Catherine Cawthorne is fresh to the picture book world but is already making her mark with: *We Went to Find a Woolly Mammoth* (Hachette, 2023) and *The Big Bad Wolf Investigates: Fairy Tales* (Bloomsbury, 2024).
- The light-hearted text and repeated 'OH NO, FLO!' refrain to join in with, makes it the perfect book to share with a group or individual child.
- Cover treatments: matt lam and SPUV.

Bessie's Bees

An uplifting story about starting nursery with a courageous neurodiverse character at its centre.

- Bringing debut, neurodiverse author George Kirk to the Templar picture book list, allowing us to grow our range of underrepresented voices and experiences.
- While there has been an increase in positive representations and neurodiverse voices in middle-grade fiction, this is yet to be seen in the trade picture book market. Templar can be one of the first to champion neurodiverse voices and stories in this space.

A hilarious rhyming romp that perfectly encapsulates how being HANGRY really makes you feel!

- Bringing debut author Kathryn Wanless as well as established, commercial talent Fred Blunt to the Templar list with his wit and humour.
- Exploring a theme that isn't currently seen in the picture book market - there are plenty of books about being hungry OR angry, but not both!
- This story uses humour as a conversation starter for children to talk about the very real, intense emotions that come with hunger.
- The book acts as a reminder that we all get hangry, even grown-ups, but it's how we deal with those feelings that matters.
- Cover treatment: matt lam, SPUV and pantone.

The Bear and the Seed

An inspirational folktale about conservation and protection of the environment by Greenaway-shortlisted Poonam Mistry.

- Created by Greenaway-shortlisted and Carnegie-longlisted illustrator Poonam Mistry, nominated in 2024 for her other Templar book, *The Midnight Panther*
- Themes of conservation and protecting the environment, and a strong message that small actions that you can take will make a big difference.

When a little boy refuses to tidy his room, his mess has dire consequences ...

- A topical story about looking after our world
- A subtle way of introducing complex and difficult subjects
- Pollution and climate changes are themes which are globally relevant
- Demand for picture books with strong messages
- A serious message conveyed in a fun and silly way.

Yetis Don't Exist!

A FUR-tastically funny rhyming adventure!

- Bringing rising talent, Kate Thompson, to the Templar list. She has two picture books with Welbeck and two new picture books coming with PRH in September 2024, and 2025.
- Bringing established quirky, commercial illustrator Loretta Schauer to the list with her bright palette and fantastic furry creatures. Loretta has previously worked with publishers like Ladybird, Farshore and Bloomsbury.
- Like *The Best Bear Tracker*, this book has a hilarious visual narrative alongside the text with the yetis and human explorer just missing each other more than once!
- The book's wintry, snowy setting offers the ideal seasonal gift without the story being explicitly Christmassy!
- Cover treatments: matt lam and foil.

The Baker by the Sea

A seaside storybook about community and family

- Atmospheric pen-and-ink artwork from debut author and illustrator Paula White. Paula was winner of the 2019 Templar Design and Illustration Awards.
- Reminiscent of the Greenaway winning *Town is by the Sea* (Walker, 2018).
- The story offers a window onto the past, guiding us around the Beach Village that once stood where Paula grew up, in Lowestoft, Suffolk. This busy, bustling place once made its living from the sea - but was eventually swept away by those very same waves.
- A moving exploration of the importance of community, with a strong father-son relationship at its heart.
- An artistic fishing village story which should be popular with retailers in seaside locations.

A Shelter for Sadness

A poignant and heartwarming picture book exploring the nature of sadness.

- Over 22,000 copies sold worldwide (as of July 2022)
- A poignant and heartwarming text addressing the hugely important and topical issue of sadness and depression
- Dealing with abstract emotions in an approachable and child-friendly way
- Anne Booth is known for the exceptional warmth and authenticity of her writing. She was inspired to write this book by the words of Etty Hillesum, a Holocaust victim.
- With superb illustrations from multi-award winning David Litchfield, who has sensitively visualized the nature of Sadness

A Shelter for Sadness

The shelter I will build for my Sadness will have light from the sun or from the moon and stars.

But the windows will have curtains that Sadness can draw when it wants to. And there will be candles or lamps if Sadness needs them.

The Little Gardener's Handbook

A vibrant introduction to gardening.

- A vibrant first introduction to gardening for ages 6+
- Includes DIY activities to try at home.
- Text by expert ecologist and educator, Michael Holland.
- Colourful, charming artwork by illustrator Maria Dek.
- Expanding the younger side of the Big Picture Press list.
- Gardening is a subject only growing in popularity.
- Arlin quarter binding and matt lam cover finishes.

The Little Gardener's Handbook

ALL ABOUT SOIL

Soil is the brown earth that plants grow in and it plays a very important role in supporting life on our planet. The best way to keep your plants happy is to take care of their soil!

Check a seed has sprouted, the soil helps to anchor the plant's roots in the ground. From here, the roots can absorb water, nutrients and minerals from the soil that help the plant to grow.

Soil is teeming with life. Did you know that there are more living things in a handful of soil than there are humans on earth? Look for all of these organisms such as worms, fungi, insects and bacteria.

These organisms have special functions. Worms, for example, are little underground diggers. As they dig, they pump out what they have eaten, which is a valuable kind of food for the soil.

GET TO KNOW YOUR SOIL

Soil is not just dirt. It's a mix of organic matter, like, the moisture and air in a garden. It's important to get to know your soil. If a plant is from a warm part of the world and you're growing it in a cool soil, it won't be happy! Similarly, a plant from a damp area won't like to grow in a sandy soil.

1. Bring a small jar (one litre/30 fl. oz.) of soil to a soil sample from your garden. Cut it to a depth of about 10cm. Remove any twigs, bits, and frogs or other garden creatures. Seal the jar with a lid and label it with your name.
2. Next, get 100g of large soil with the soil sample. Put the soil in a jar and seal it with a lid. Put it in a warm place for 24 hours to settle.
3. You should now be able to see the different layers of soil. The amount of soil in different layers and the texture of the soil will vary. It's important to note this. You will write up and even make the top layer into a compost bin as you try to perfect it in the water.

GARDEN FOES

Sometimes your garden might be visited by some not so welcome wildlife visitors - something that creep through your plants and nibbling away at them. Rather than using harmful chemical pesticides, there are some natural ways you can discourage any unwanted visitors to your garden.

ENCOURAGE BENEFICIAL ANIMALS

You can encourage beneficial creatures naturally by encouraging beneficial visitors such as ladybirds, bees, hoverflies, birds and frogs in your garden. The plants you choose and what you do can help, making a bug hotel or adding a bird bath.

PEST REPELLENTS

To repel insects, you can make your own natural repellents using a mixture of water, garlic, onion and chili.

PROTECT PLANTS

Use netting to protect plants from birds and other pests.

KEEP AN EYE OUT FOR PESTS

Slugs and snails can eat a whole batch of seedlings overnight. You can try to catch them by hand, or use a slug trap. They're also attracted to beer. Beer traps - gently covering them and waiting. When a snail or slug falls in, they drown.

BEES, BUTTERFLIES AND OTHER POLLINATORS

Bees, butterflies and other pollinators are essential for many plants. You can attract them by planting flowers that they like to visit.

GROW CUPS OF NASTURTIUMS

Did you know that you can eat the petals from certain flowers? Nasturtiums are bright and colourful, and they have a little peppery taste. You can add them to a salad for a burst of extra flavour.

YOU WILL NEED:

- Old cups or tins
- Water
- Compost
- Nasturtium seeds
- Water

1. In the bottom of each cup, add a layer of gravel. This is to allow the water to drain away from the roots because the cups do not have any drainage holes.
2. Fill each cup with compost.
3. Place a couple of holes in the compost and drop in the seeds.
4. Cover with a little extra compost and add water to the level of the water mark on the side of the cup.
5. After a week or two, the seeds will start to grow. When they're about 5cm tall, they can be eaten. They're best eaten raw.
6. In a few more weeks, flowers will appear. You can harvest them whenever you like. If you do on the plant, cut and place off with a scissors. They will grow again.

WELCOME TO THE WONDERFUL WORLD OF GARDENING!

Whether you have a big garden or a small windowsill, you can make the world a greener place. Gardening is one of the best hobbies in the world and it's good for you, your neighbourhood and our planet! People have been gardening in one way or another for thousands of years, so you will be continuing a very long and important tradition.

In this book, you'll learn about how plants work, how to grow your own vegetables, how to encourage wildlife to your garden and why protecting plants is important for our lovely planet. Along the way, there will be plenty of activities and experiments for you to try for yourself - mostly using everyday materials you can find at home.

What are you waiting for? Let's begin!

- Universal appeal, including stories from cultures on every continent
- *Winter Tales* has sold more than 80,000 copies across 15 territories
- Cover: Arlin + foil

Enchanted Tales

The Magic Fish

A tale from China

The Brothers Grimm version of "Cinderella" is the one many of us are familiar with, but there are hundreds – maybe even thousands – of different versions of this tale from around the globe. This version from China was the first to be written down, over 1,000 years ago.

Once upon a time, in a little shed outside a little house in the cave mountains of Southern China, there lived an orphan called Ye-Tsien. She was bright-eyed, clever, kind and good at making things. Ye-Tsien's stepmother loved her own daughter best, so Ye-Tsien had to do all the heaviest, most dangerous work, like collecting firewood from the deep forest or water from the high mountain pools. One day, Ye-Tsien was collecting water when up from the bottom of a deep mountain pool there was a shimmering and a glittering. It travelled up and up until something broke the surface – a tiny, shining golden fish! The fish looked up at Ye-Tsien, Ye-Tsien looked back – and from that moment, the fish

The Magic Fish

and Ye-Tsien became friends. She took it home, placed it in a basin and fed it every day with scraps from her own plate. The fish grew and grew until, one day, it had grown so big she had to take it back to the pool. Still, Ye-Tsien visited the golden fish every day, and each time the fish would poke its shining golden head out of the water and greet her.

A few weeks later, the Stepmother was hungry and had an idea. Secretly, she fished Ye-Tsien to the pool. She saw how the huge, sparkling, delicious-looking fish always came out for Ye-Tsien but stayed deep under the water when anyone else came by. *How can I outwit this clever fish?* she thought.

The next day, back at home, the Stepmother gave Ye-Tsien new clothes to put on and sent her on a long errand down the mountain. Then she disguised herself in Ye-Tsien's old clothes, went to the pool and called the fish. When it bubbled up from the bottom of the pool, the Stepmother was ready with a knife. She took the golden fish home, chopped it up, cooked it and served it up to eat with her favourite daughter.

'Delicious!' they both said, wiping their mouths. They ate every morsel and threw its bones away on the rubbish heap.

The following day, Ye-Tsien hurried to the mountain pool and called – but no fish came. Big tears fell from her eyes and splashed into the empty pool. But as she cried, the air thickened, shimmering and glittering, and a figure appeared. It spoke in a voice that reminded her of safety:

*Today you cry, today you weep,
But look upon the rubbish heap.
Your fish friend's magic bones are there.
They'll grant you wishes, never fear.*

• THE NETTLE QUEEN •

The Nettle Queen
A folktale from Denmark

Nettles grow in great families and give us many gifts: food, medicine, cloth and dye. Nettle leaves are so rich and tender that many countries have to eat them – the plant uses its sting to make sure that not too many of its leaves get munchled! Nettle tea is zesty green. Nettle soup helps our bodies and bones grow strong and healthy. People have been using nettle stems to make cloth since Bronze age times.

Once there was a king who had six sons and one daughter, Eliza. The king loved his family dearly. So, when the king's wife died, he was sunk in grief. But his advisers told him: "The country needs a queen! Besides, the children need a mother. So, though his heart had not yet healed, the king married again.

His new queen felt at once the lack of love. Hurt hardened her heart. One day, when the boys woke her with their noise, she snarped, "Get out!" she shouted. "Just go! Fly away!"

Words have power. As she pointed, the boys' skin sprouted feathers. Their arms became wings. Their necks stretched. And they flew: six white swans.

Now, the queen made a strong dark dye – in a great pot, walnut shells liddled and brewed. She poured the dye into Eliza's bath. It stained her hair and changed her face – she looked so different, even her own father did not know her.

"Who let a stranger in here?" he cried. "Throw her out!"

Eliza fled, into the forest. She wandered the woods, wishing her brothers were with her. But the trees and the plants, the birds and the animals were all with her. She talked to them, as if they were her brothers.

"Hello, Butterfly!"

"Hello, Nettle, may I pick a leaf? Ow?"

The sting made the tips of her fingers tingle. Just then, along came a woman, gathering nettles for soup. She picked a dock leaf for Eliza, to soothe her skin. She showed her the tiny butterfly eggs, she'd reared beneath a nettle leaf. She taught her how to pick the very top tips of the plant, that are best to eat. Eliza thanked the woman, and she asked her, "Please... Have you seen six princes?"

The woman shook her head. "No... no princes... But I did see six swans, down on the river."

Eliza followed the river all the way to the sea. But she didn't find her brothers. She did find a white feather, on the shore. She sat on the sand with the feather in her hand. And as the sun began to set, there came a sound – over the ponding of the waves – the singing of wings.

From over the horizon came six wild swans. As they landed, their white feathers fell away. There stood six boys – Eliza's brothers! Then there was hugging and kissing and laughing and crying, and more hugging.

"Every day, when the sun rises, we turn into swans," said her youngest brother. "We only become boys again when the sun sets. We live far off over the ocean, but every day, we fly back, to look for you."

"Now you've found me," said Eliza. "Take me with you!" So Eliza and her brothers gathered supple willow and tough rush, and together they knatted a net.

Eliza sat in the net and her own brothers lifted her clean into the

Mythical Tales

DIONYSUS AND THE PIRATES

Long ago, a fast ship sped East, hot sunlight cauting its shadow on the sparkling sea. The wind filled its sails and rows of wooden oars cut through the water, worked by strong sailors. On the ship's deck, twenty pirates smiled. The ship's hold was full of gold, jewels, fine delicacies, and something even better: a rich passenger who was going to make their fortunes!

That morning, a young man with diamond-bright eyes, rich purple robes and long dark hair, had wined and colked from a clifftop:

"Sailors! Take me to the island of Naxos. I'll pay you well!"

The pirates agreed, and the young man had boarded the ship. But the pirates didn't just take goods, they were kidnappers too. The ship sailed straight past Naxos, and the captain cried, "You're our captive now! Your family will pay a ransom, or we'll sell you as a slave!"

The young man did not answer. He did not look worried either. He just stood there, eyes glittering, mouth curled up in a secret smile.

PERUN'S STOLEN CATTLE
A tale from Croatia

Perun was a powerful god, the ruler of the sky and the earth. He was the god of storms, lightning, and thunder. He was also the god of justice and law. He was the god who punished the wicked and rewarded the good.

One day, Perun was angry with the people of Croatia. They had stolen his cattle, and he had to punish them. He sent a storm to destroy their crops and to take away their lives.

The people of Croatia were afraid of Perun. They thought he was a very powerful god. They thought he would punish them if they did not stop stealing his cattle.

But the people of Croatia were not afraid of Perun. They were afraid of the sun. They thought the sun was a very powerful god. They thought the sun would punish them if they did not stop stealing Perun's cattle.

So the people of Croatia stole the sun. They hid it in a cave, and they kept it there for a long time. Perun was angry with them, but he did not know where the sun was. He did not know where to go to get his sun back.

At last, the people of Croatia were tired of hiding the sun. They decided to give it back to Perun. They took the sun out of the cave, and they gave it to Perun. Perun was happy with them, and he did not punish them.

DIONYSUS AND THE PIRATES

A tale from Ancient Greece

Greek myth is bursting with colourful gods and goddesses and their dramatic dealings with each other – conquest, trickery, family feuds and lots more. But some of the most amazing and fascinating stories are about what happens between gods and people. Dionysus – son of the mighty god Zeus but also half-human himself – is known as the god of wine, pleasure and inspiration. This story is about one of his extremely creative ways of punishing humans who annoy him...

Raising the Roof

A cool introduction to classical music

- Broadcaster, songwriter, composer and Scala Radio presenter Jack Pepper is an exciting, young voice in classical music.
- A fun and approachable introduction to classical music
- Includes a playlist, so you can listen as you read
- **SAMPLE CONTENTS:** Hildegard of Bingen 1098-1179; Claudio Monteverdi 1567-1643; Barbara Strozzi 1619-c. 1664; JS Bach 1685-1750; Joseph Bologne 1745-1799; Ludwig van Beethoven 1770-1827; Richard Wagner 1813-1883; Giuseppe Verdi 1813-1901; Ethel Smyth 1858-1944; Arnold Schoenberg, 1874-1951; Igor Stravinsky, 1882-1971; Florence Price, 1887 - 1953; George Gershwin, 1898-1937; Leonard Bernstein, 1918-1990

Raising the Roof

SYMPHONY

The symphony has changed over the centuries, but it is essentially an extended piece of music for a large group of players. The word had even been the Greek, meaning 'sounding together'. It is often a composer's lifetime piece because the size and scale of the music make it hard to pull off.

A symphony is often in four movements, with two in a major key. There are five movements, which are the norm, but some composers have written symphonies with three or six movements. The most common is in four movements, with the first movement often in a major key, the second in a minor key, the third in a major key, and the fourth in a major key.

LEARNING TIP
Have a go at writing your own symphony. It can be as simple as writing a melody for each instrument, or as complex as writing a full score. Use the notes on this page to help you.

1800s The first symphony was written in 1800 by Joseph Haydn. It was a single movement in a major key, and was called 'Symphony No. 1'.

1700s The first symphony was written in 1700 by Johann Sebastian Bach. It was a single movement in a major key, and was called 'Symphony No. 1'.

1776 The first symphony was written in 1776 by Wolfgang Amadeus Mozart. It was a single movement in a major key, and was called 'Symphony No. 1'.

1800s The first symphony was written in 1800 by Ludwig van Beethoven. It was a single movement in a major key, and was called 'Symphony No. 1'.

1872 The first symphony was written in 1872 by Johannes Brahms. It was a single movement in a major key, and was called 'Symphony No. 1'.

1748 The first symphony was written in 1748 by George Frideric Handel. It was a single movement in a major key, and was called 'Symphony No. 1'.

1800s The first symphony was written in 1800 by Franz Schubert. It was a single movement in a major key, and was called 'Symphony No. 1'.

Present The first symphony was written in the present by many composers. It is a single movement in a major key, and is called 'Symphony No. 1'.

Richard Wagner

1813-1883

To Listen or Not to Listen...
Can we really appreciate Wagner's music? Or is it just a collection of notes and rests? Wagner's music is a masterpiece of the Romantic era, and is a perfect example of the power of music to move us. His music is a masterpiece of the Romantic era, and is a perfect example of the power of music to move us.

Wagner had a lot to say and did things his way. He pushed music to its limits and revolutionised everything. He had to invent a new language.

Richard Wagner was a German composer, conductor, librettist, and opera reformer. He is best known for his operas, which are a blend of music and drama. His music is a masterpiece of the Romantic era, and is a perfect example of the power of music to move us.

Hildegard of Bingen

1098-1179

Here's someone who was, in every sense, a visionary Hildegard of Bingen had visions of God and wrote them down as poems and music.

Music was just one part of a lifetime of interests. Hildegard of Bingen - named after the German town she came from - was first and foremost a nun, diplomat, writer, leader, adviser, plant expert, scientist, public speaker... and a composer. But it all came back to faith. Hildegard became a nun aged 15 and later created her own monastery with 18 sisters. As if that wasn't enough, Hildegard then developed her own language and alphabet, possibly to help bring her nuns together. She used her talents - for music and for words - to unite people. It was all ultimately about expression. Hildegard wrote books on natural history, plants and medicine, and was even the first person to write a morality play, a drama where good battles evil (think Star Wars, but in the 1100s). That made her the 'influencer' of the time! She became a pen pal of popes, kings, emperors and cardinals, and was herself a major public leader: she went on at least four public speaking tours of Germany. This was bold stuff, given that women of the time were not allowed to travel as preacher-teachers, she was in many ways an early feminist, championing the rights of women and dealing with men on an equal footing. No wonder why, in the centuries after her death, Hildegard was considered for sainthood by no less than four different popes!

Learning by Ear
The Greeks were the first to use letters of the alphabet to represent different notes. Yet until the Middle Ages, almost all music was passed down the generations by mouth, instead of being written down. There was a lot to learn: in the 600s, monks in churches are estimated to have memorised 80 hours of music, all by ear! By the 900s, it took around 10 years to teach a young chorister all the pieces they'd need to know for future services. And you think school is intense...

LISTEN!
A Feather on the Breath of God sung by Gothic Voices
Hildegard was a Bala-Ivona name even in musical circles, until early music became widely performed and recorded from the 1970s onwards. One of the standards in this album, released in 1985.

She sent me a letter!
And a botany book to me!
I'm scheduling that next tour!

Earthlings

Na 100 dorosłych Ziemiaków 87 potrafi czytać i pisać, 87 poszło do szkoły podstawowej, 66 uczyło się w szkole średniej, 40 zdobyło jakiś rodzaj wykształcenia wyższego, a siedmiu ukończyło studia uniwersyteckie.

Dawniej umiejętność czytania i pisania była u Ziemiaków niezwykle rzadka. Pisać i czytać potrafili tylko przedstawiciele władzy, duchowieństwo i nauki. W Europie niezliczeni piśmiennicy posługiwali się wyłącznie łaciny. Książek, przepisywanych rękopiśmiennie, było mało. Były one bardzo drogie i dla

większości niedostępne. Dopiero wynalazek druku około 1450 roku, które spowodowało masową dostępność książek i gazet w językach narodowych, wpłynęło na rozpowszechnienie się umiejętności czytania. Zmienił się też sposób lektury: zamiast na głos zaczęto czytać cicho, prywatnie.

Przed 3000 laty w Egipcie i Mesopotamii zaczęto pisać. W 1800 roku w Europie było 100 000 000 osób, 25% - mniej niż 1000 osób, a 64 - tylko jedna albo dwie osoby. W 2050 lat temu Ziemiaków było 3000, w 2050 roku będzie ich już 10 000 000 000.

FAKTY NA KONIEC

There are eight billion Earthlings living on Earth.

There are more and more earthlings. 200 years ago, one billion people walked the planet. In 2056 there will already be ten billion.

More than half of Earthlings today live in cities, but for most of history, Earthlings lived mainly in villages. As recently as 200 years ago, 95 out of 100 Earthlings lived outside of the cities.

Nine out of ten earthlings in cities breathe polluted air.

Three out of ten residents of cities live in slums.

In the year 0, the Earth's population was 200 million, in 1000 - half a billion, in 1927 - two billion, and in 1960 - 3 billion. 51% of Earthlings live in cities. By 2050, cities will be home to 70% of Earthlings.

- With vibrant, energetic illustrations from Violeta Noy, author and illustrator of *The Right One*.

World of Sport

TRACK AND FIELD SPORTS
Track and field sports take place outdoors on a running track. Track events are running competitions and in field events, athletes compete in jumping and throwing events.

JAVELIN
The javelin is a long, thin spear-like object used in track and field events. The first javelin was made of wood and had a stone head. Today, javelins are made of metal and have a pointed tip.

LONG JUMP
The long jump is a track and field event in which the athlete jumps as far as possible into a sandpit. The long jumper must take off from a 21m runway and land in the sandpit. The longest long jump ever was made by Mike Powell in 1991, when he jumped 9.1m.

GALINA CHISTAKOVA
Galina Chistakova is a Russian long jumper. She won the gold medal at the 2004 Athens Olympics with a jump of 7.25m.

DISCUS
One of the most beautiful sights in the ancient world is to watch the Discobolus or 'discus thrower'. The statue is a Greek Discus thrower. It is a bronze statue of a young man in a red tunic and a white helmet. He is shown in the middle of a throw, with his right arm raised and his left arm bent. The statue is 1.8m high and is made of bronze.

JAN SZENT
The javelin was invented by the ancient Greeks. It was used as a weapon in battle. The first javelin was made of wood and had a stone head. Today, javelins are made of metal and have a pointed tip.

AMERICAN FOOTBALL
American football is a team sport that originated in the United States. It is a contact sport where players use their bodies to move the ball down the field. The game is played on a rectangular field that is 100 yards long and 53 1/3 yards wide. The ball is an oval-shaped object made of leather or synthetic material. The game is played in four quarters, each lasting 15 minutes. The team that scores the most points at the end of the game wins.

RUGBY
Rugby is a team sport that originated in England. It is a contact sport where players use their bodies to move the ball down the field. The game is played on a rectangular field that is 100 meters long and 70 meters wide. The ball is an oval-shaped object made of leather or synthetic material. The game is played in two halves, each lasting 40 minutes. The team that scores the most points at the end of the game wins.

BASEBALL
Baseball is a team sport that originated in the United States. It is a bat-and-ball game where the goal is to score runs by hitting a ball thrown by the pitcher. The game is played on a diamond-shaped field that is 90 feet long. The ball is a small, round object made of leather or synthetic material. The game is played in nine innings. The team that scores the most runs at the end of the game wins.

CRICKET
Cricket is a team sport that originated in England. It is a bat-and-ball game where the goal is to score runs by hitting a ball bowled by the bowler. The game is played on a rectangular field that is 140 meters long. The ball is a small, round object made of leather or synthetic material. The game is played in five days. The team that scores the most runs at the end of the game wins.

HOW SPORT BEGAN
People have always enjoyed getting together and competing to find out who's the strongest, fastest or best at something. Humans have been playing sport since ancient times.

WHAT WAS THE FIRST SPORT?
Can you see any ancient cave paintings on the map? We don't know for certain what the world's first sport was, but we can guess from these ancient artworks.

GRAND BEGINNINGS
The first competitive sport we know about was recorded in a famous story, the *Epic of Gilgamesh*, from 2100 BC. In it King Gilgamesh fights a wild man to see who is stronger.

Pateca
Pateca *patepecha* was played in the ancient Mexican city of Teotihuacan as long ago as 1500 BC. It was a bit like hockey except the ball was on fire!

In chunky
In chunky, played for centuries by Native Americans, a stone disc was rolled across the ground. Teams throw spears to predict where they thought it would land.

The ancient Mayan ballgame
The ancient Mayan ballgame of pitz was invented sometime between 2,000 and 4,500 years ago. Competitors had to get a ball through a stone hoop without using their hands.

Wall paintings made in caves
In France, around 20,000 years ago, seem to show people running and wrestling.

Some ancient Egyptian tomb paintings
Some ancient Egyptian tomb paintings demonstrate wrestling positions.

During the Western Zhou Dynasty (1046-771 BC), archery
During the Western Zhou Dynasty (1046-771 BC), archery was part of the education of wealthy men.

In jousting
In jousting, two people in a boat would fight with long poles or 'jousts'. Ancient Egyptian carvings show fishermen jousting. They tried to push each other into the river Nile!

Surfing has been popular in the Pacific
Surfing has been popular in the Pacific for hundreds of years. In Hawaii, chiefs competed in fierce competitions, and good surfers could win high social status.

The Māori of New Zealand participated in a competition known as the Māori Games
The Māori of New Zealand participated in a competition known as the Māori Games - often between neighbouring villages. Men, women and children all competed in canoe races, athletics and martial arts.

Inside Story: How the News Works

Get the inside story on today's most important topics and learn to navigate the news like a pro!

- An all-encompassing, no-nonsense guide to the news industry, looking at how news is made, what and who it's for, what to look out for when digesting news and tips on how to be a savvy news-consumer.
- Written by expert authors from ITN news team, including tips from ITV's Charlene White. Informed by lived experiences of real journalists from across the news sector.
- News from a global perspective: look at key moments in news history and stories that shaped the world from Europe, America, China, Indonesia, India and more.

Tell Me About: Space

Big science for little readers.

- The third title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at space for young children, featuring topics such as: planets and moons, the solar system, stars and galaxy, constellations, what's in the night sky, gravity, the big bang, going into space and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Big science for little readers.

- The fourth title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at earth science for young children, covering topics such as day and night, seasons and weather, biomes, physical landscapes, the water cycle, volcanoes and earthquakes, fossil fuels, carbon emissions and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Earth is Home

You live on a brilliant ball of spinning rock called Earth. It's a planet, travelling through space on a gigantic loop around a star called the Sun.

There's another ball of rock about a quarter of the size of Earth and you can see it in the night sky. It's called the Moon.

It takes a month for the Moon to travel around Earth on an oval path.

It takes a whole year to travel all the way around the Sun. So if you are five years old, you have circled the Sun five times already!

Earth travels around the Sun on an oval path but it also spins on the spot. The spin is why it gets dark at night.

Your home turns away from the Sun at night and by morning it has turned back towards the Sun once again. It takes 24 hours for a complete spin to happen, and we call that a whole day.

Caves

Caves are big holes carved into cliffs by waves hitting the rock. But they can also form underground as rain trickles through cracks in the rock.

That's right, tiny little rain droplets can make massive caves because they dissolve the rock away a little bit at a time.

Underground rivers flow through caves. They wear the floor of the cave down to make them even bigger.

Inside the cave, some droplets of rainwater evaporate. As the liquid water drops turn into gas, they leave behind the tiny bits of rock they were carrying. The bits of rock stick to the roof.

In a thousand years, all the drops of water will have left enough rock behind to make a shape about as long as your finger. This is called a stalactite.

The same thing happens as the water drops onto the floor of the cave too. The cave floor grows upwards into a wider opening, which is called a stalagmite.

Digging and Drilling

When humans dig useful rocks and metals out of the ground, it is called mining. People also drill long holes deep down into the rock to find little pockets of gas and a liquid called oil.

The oil and gas found deep underground were once tiny sea creatures. They sank to the bottom of the sea and got squashed over millions of years. They turned into a dark liquid called oil and a gas called methane.

Cool is a black rock that gives off lots of heat when it burns. It is made from leaves that took in swamps millions of years ago.

We can burn oil, coal and methane gas to make electricity and to power vehicles.

Most metals are hidden underground with other rocks. A few metals are found just as they are at the surface, including gold, silver and copper.

Metals can make lots of useful things including bikes, phones, computers and cars.

Oceans

If you flew out into space and looked back at Earth it would look blue. That's because two thirds of our planet's surface is covered in liquid water. It's mostly found in the oceans and seas.

Waves

Waves are made on the surface of the water as the wind pushes the sea.

Tides

The sea comes in at high tide and goes out at low tide. This happens twice every day because of the way Earth is spinning beneath the Moon.

That's right, the Moon makes our tides! Gravity is a pull that happens between Earth, the Moon and the Sun. It pulls on you too. When you jump, gravity pulls you back down to Earth.

Low tide

High tide

The oceans on planet Earth slowly change shape because the rock beneath them is moving. This creates underwater valleys, caves and mountains.

Mountain

Valley

Did you know...? Seawater is salty because of salt from rocks!

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert" 14

One of the most popular treats given back to the world was the ice cream cone. It was first made in the United States in 1906. The inventor was an Italian immigrant named Italo Calio. He was working in a store selling Italian goods. He had a machine for making soft-serve ice cream. One day he was asked to make a cone. He had no cones, but he had a wafer. He used the wafer to make a cone. The ice cream cone was born.

Easy Ice Cream

Bicycle

"Freedom on two wheels" 15

Did you know that the first bicycle was not a bicycle at all? It was a wooden cart with two wheels. It was called a velocipede. It was invented in 1791. It was a simple wooden cart with two wheels. It was used for short distances. It was not very comfortable. It was not very fast. It was not very popular. It was not very successful. It was not very important. It was not very interesting. It was not very exciting. It was not very fun. It was not very enjoyable. It was not very satisfying. It was not very rewarding. It was not very fulfilling. It was not very meaningful. It was not very significant. It was not very important. It was not very interesting. It was not very exciting. It was not very fun. It was not very enjoyable. It was not very satisfying. It was not very rewarding. It was not very fulfilling. It was not very meaningful. It was not very significant.

Pertious Penny-Farthing

Camera

"Snap photos" 24

Although it may seem to be a simple invention, a camera is a complex piece of technology. It was invented in 1816. It was a simple wooden box with a lens on one side and a piece of paper on the other. It was used to take pictures. It was not very clear. It was not very sharp. It was not very bright. It was not very dark. It was not very colorful. It was not very interesting. It was not very exciting. It was not very fun. It was not very enjoyable. It was not very satisfying. It was not very rewarding. It was not very fulfilling. It was not very meaningful. It was not very significant.

Developed to Perfection

High-Speed Train

"No-speed" 25

Before the 19th century, the only way to get from one place to another was by horse. It was slow. It was tiring. It was expensive. It was not very reliable. It was not very safe. It was not very comfortable. It was not very convenient. It was not very efficient. It was not very effective. It was not very successful. It was not very important. It was not very interesting. It was not very exciting. It was not very fun. It was not very enjoyable. It was not very satisfying. It was not very rewarding. It was not very fulfilling. It was not very meaningful. It was not very significant.

Marvelous Maglevs

Wind Turbine

"Harnessing the power of wind" 34

You might have seen a wind turbine on an island. It is a tall tower with three blades. It is used to generate electricity. It is a clean source of energy. It is a renewable source of energy. It is a sustainable source of energy. It is a green source of energy. It is a natural source of energy. It is a free source of energy. It is a simple source of energy. It is a easy source of energy. It is a quick source of energy. It is a fast source of energy. It is a reliable source of energy. It is a safe source of energy. It is a secure source of energy. It is a sound source of energy. It is a solid source of energy. It is a strong source of energy. It is a healthy source of energy. It is a happy source of energy. It is a bright source of energy. It is a beautiful source of energy. It is a wonderful source of energy. It is a fantastic source of energy. It is a marvelous source of energy. It is a magnificent source of energy. It is a marvelous source of energy. It is a magnificent source of energy.

Green Energy

Helicopter

"A surprising way to fly" 35

When you think about flying, you probably think of an airplane. But there is another way to fly. It is called a helicopter. It was invented in 1907. It was a simple machine with two rotors. It was used for transport. It was used for rescue. It was used for war. It was used for sport. It was used for fun. It was used for entertainment. It was used for recreation. It was used for leisure. It was used for relaxation. It was used for enjoyment. It was used for pleasure. It was used for happiness. It was used for joy. It was used for love. It was used for life. It was used for death. It was used for everything.

Versatile VTOLs

Wheel

"The revolutionary design that makes the world go round" 17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles – no carts, cars, bikes, buses, trucks, trains, trams or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3200 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips" 18

The invention of the Internet – a network of computers that 'speak' to each other – was a concentrated effort in the United States. The first computers were connected to each other in 1969 during the Cold War (1947–1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: LOGIN, but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want – books, food, holidays, cars – with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

There Are Amphibians Everywhere

An illustrated introduction to amphibians.

- Contents: There are amphibians everywhere; It's an amphibian! (So what is that that?); Amphibians have been around for ages; Where do amphibians live?; How do amphibians live?; Moving; Feeding; Life stories; Metamorphosis; Staying alive; Tropical terrors (poisonous frog spotlight spread); Amphibians and people
- Britta's There Are... series has sold a combined quantity of over 100,000 copies worldwide (as of July 2022)
- Lush and colourful illustrations to immerse young readers in the natural world
- Lively text and use of search-and-find element make these books informative and interactive.
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally

There are Mammals Everywhere

An illustrated introduction to mammals.

- A combined quantity of over 100,000 copies worldwide (as of July 2022) has sold for Britta's *There Are...* series
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally
- Contents: There are mammals everywhere; It's a mammal! So what is that that?; Mammals have been around for ages; Where do mammals live?; The savannah; Staying alive; Feeding; Moving (elephant spotlight spread); Mammal parents; Mali elephants; Birds and people
- The colourful exploration of mammals follows on from Britta Teckentrup's *There are Fish Everywhere*, *There are Bugs Everywhere*, *There are Reptiles Everywhere* and *There are Birds Everywhere*.

There are Mammals Everywhere

IT'S A MAMMAL! (SO WHAT IS THAT?)

There are almost 6,000 species of mammals alive today. Mammals may look very different on the outside, but they all have **skullcaps** that allow them to perform a wide range of movements. Some mammals have four legs and a tail, but others walk on two legs, fly using two wings, or have flippers and fins.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn. Some mammals have a brain that is as big as a human's.

BREATHING AIR
Mammals breathe air. They have lungs and a diaphragm that contracts and relaxes to draw air into the lungs. This means they can breathe even when they are underwater.

BIRTH
Mammals give birth to live young. The first mammals had to be able to breathe air and walk. They had to be able to find food and protect themselves from predators.

CATS
Mammals have sharp claws and teeth. They use these to catch and eat their food. Some mammals, like cats, have retractable claws that they can pull out when they need them.

SKIN
Mammals have skin that can stretch and move. This allows them to move and breathe easily. Some mammals have thick skin and fur to keep them warm.

RECORD-BREAKERS
Mammals have some amazing records. The blue whale is the largest mammal ever. The kangaroo rat is the smallest. The platypus is the only mammal that lays eggs.

MAMMALS HAVE BEEN AROUND FOR AGES

Mammals have been around for a really long time. The first mammals looked like shrews, which are tiny animals with long, pointed snouts. They lived about 200 million years ago. Other mammals looked like cats and some of these were much bigger than cats. They lived about 100 million years ago. Some mammals looked like horses and some were much bigger than horses. They lived about 50 million years ago. Some mammals looked like elephants and some were much bigger than elephants. They lived about 20 million years ago. Some mammals looked like giraffes and some were much taller than giraffes. They lived about 10 million years ago. Some mammals looked like dinosaurs and some were much bigger than dinosaurs. They lived about 5 million years ago. Some mammals looked like humans and some were much smarter than humans. They lived about 2 million years ago.

WHY ARE MAMMALS UNIQUE?

Mammals are a large and very successful group of animals. They have been able to spread across the world and survive in all sorts of habitats because they have some unique ways to stay warm, find their young and get food.

WARM BLOOD
Mammals are endothermic, which means they can control their body temperature. They can keep their body warm even when it's very cold. This means they can live in all sorts of climates. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn. Some mammals have a brain that is as big as a human's. This means they can solve problems and find new ways to get food.

SEA OTTERS
Sea otters can be found floating in the Pacific Ocean. They have the ability to float on their backs and hold their breath for a long time. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

SEA OTTERS
Sea otters have a special way of staying warm. They have a thick layer of fur that keeps them warm. They also have a special way of finding food. They use their paws to hold their prey and eat it.

SEA OTTERS
Sea otters are very smart. They can solve problems and find new ways to get food. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

SEA OTTERS
Sea otters are very cute. They have big eyes and a friendly expression. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

SEA OTTERS
Sea otters are very important. They help to keep the ocean healthy. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

SEA OTTERS
Sea otters are very special. They have a unique way of staying warm. They have been able to survive in the coldest parts of the world and the hottest parts of the world.

WHERE DO MAMMALS LIVE?

Nearly all species of mammals live on land - about 98 per cent of them. However, there are groups of mammals that spend most, or all, of their lives in water. These include **pinnipeds**, **whales** and **dolphins**. Other groups of mammals are superb swimmers and spend lots of time in the water, but choose to stay on land when they give birth or raise their young.

WHALES
Whales are perfectly adapted to life in the ocean. They have smooth skin and torpedo-shaped bodies that slip easily through the water. They have **flippers** instead of legs and they breathe using **blowholes** on the top of their heads.

Whale mothers give birth in the ocean. Their babies are called **calves** and they stay close to their mothers while they grow and learn how to find food.

Blue whale babies are enormous and they grow a thousand times faster than a human baby!

BEAVERS
Beavers belong to a group of mammals called **rodents** that have super-strong front teeth. They use these teeth to gnaw trees and branches and use the wood to build their homes in the middle of a pond or slow-flowing river.

A beaver's home is called a **lodge**. It contains rooms, called **chambers**, where young beavers are kept safe from predators.

Beavers are good swimmers. They enter the lodge through tunnels underwater and can stay safe and warm in their home during long, cold winters.

TUNDRA

The land around the Arctic is called the **tundra** and it is famous for its snowy blizzards and blustery winds. It is a difficult place to live - unless you can stay snug inside your own super-thick fur coat. **Musk oxen** have hair that almost touches their toes and they snuggle up next to each other to get the benefit of some buddy-body-warmth!

FORESTS
Tropical forests are packed with tall trees that bloom all year round, producing plenty of fruit for any animals that can reach it. **Orang-utans** spend almost all of their lives in the branches, using their strong arms to climb from tree to tree, following the fruit as it ripens.

DESERTS
Deserts are very dry habitats that experience extreme temperatures. **Bactrian camels** survive desert life by storing food and water as fat inside their two **humps**. They grow thick, shaggy fur for the icy winter, and shed it for the hot summer months.

CAVES
Many species of bats gather together in caves in big groups called **colonies**. They rest during the day by hanging upside down from the cave ceiling and go hunting at night. Some caves can house more than five million bats!

CAN YOU FIND?
Other animals like to camp out in a beaver's lodge, including **water voles**. Can you find one of those small, furry rodents with a long tail?

Celebrate the achievements made in medical engineering and take a glimpse into the future.

- Sample contents: The First Prosthetics, Jack E. Steele - Father of Bionics, Arne Larsson - The First Pacemaker Patient, How Cochlear Implants Work, Eye Replacements, Keith Hayman - The First Bionic Eye, How Bionic Limbs Work, Campbell Aird - The First Prosthetic Arm, Exoskeletons, Neural Implants, The Paralympics, Neil Harbisson - The First Cyborg, Ethics
- Phenomenal artwork by highly acclaimed artist Samuel Rodriguez
- As told by UK Sepsis Ambassador Patrick TJ Kane
- The first of its kind - a book that celebrates the history of medical implantables and prosthetics

New materials have allowed frames for glasses to become lighter and more durable. The colour of lenses has changed too, creating the first purpose-built sunglasses. These work by adding cerium oxide (a type of chemical compound) into the glass to filter out harmful ultraviolet light from the sun. Sunglasses quickly became fashionable, and in 1938, it was reported that 20 million sunglasses had been sold the year before in the US. Interestingly, only a quarter of those people needed sunglasses for medical reasons. This development is an example of a product that was initially designed to benefit a few but ended up benefitting many. It is testament to the importance of innovation within the disabled community.

Up in the Canopy

Explore the jungle layer by layer with a huge fold-out surprise at the end.

- James Aldred's book *The Goshawk Summer* won the 2022 James Cropper Wainwright Prize for Nature Writing.
- Written from the perspective of real-life Emmy-nominated cameraman and explorer, James Aldred
- Stunningly illustrated - with artwork as rich and dense as the rainforest itself
- Huge fold-out tree at the back of the book, which readers can pore over.
- Matt lam, fluoro pantone and spot UV finishes.

Under the Starlit Sky

This beautifully illustrated book takes readers on a journey from the roots to the canopy of a majestic old oak tree, right in the heart of Europe's most ancient forest ... with a huge fold-out surprise on the final spread.

- The follow up title to the beautiful *Up in the Canopy*
- As told by real life explorer and tree climber, James Aldred (winner of the 2022 Wainwright Prize for Non-Fiction)
- Illustrated by award-winning duo *Good Wives and Warriors*.

From Cells to Ourselves

From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

From Cells to Ourselves

HOW DID LIFE BEGIN?

THE 1920s American chemist Stanley Miller and British physicist James Watson conducted the first experiment to simulate the conditions of the early Earth. They used a mixture of gases and water vapor to create a 'primordial soup' from which life might have emerged.

THE 1950s British scientist Francis Crick and American physicist James Watson discovered the structure of DNA, the molecule that carries the genetic code.

THE 1960s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell and became organelles.

THE 1970s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 1980s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell and became organelles.

THE 1990s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 2000s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell and became organelles.

THE 2010s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 2020s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell and became organelles.

THE DINOSAUR DETECTIVES

In the 19th century, scientists discovered, investigated and named many species of dinosaurs. But for a long time, these dinosaurs remained hidden.

MARY ANNING (1799-1847) was a young girl who lived in Lyme Regis, Dorset. She was known for her discovery of fossilized sea shells and other marine life. She also discovered the first dinosaur fossil, a small, three-toed claw.

WILLIAM BUCKLAND (1784-1861) was a geologist and naturalist. He was the first to suggest that the fossilized claw was the remains of a dinosaur. He named it 'Iguanodon'.

RICHARD OWEN (1804-1892) was a biologist and naturalist. He was the first to suggest that the fossilized claw was the remains of a dinosaur. He named it 'Iguanodon'.

OSBORN MARSHALL (1790-1852) was a geologist and naturalist. He was the first to suggest that the fossilized claw was the remains of a dinosaur. He named it 'Iguanodon'.

THE GREAT OCEAN WALKER was a geologist and naturalist. He was the first to suggest that the fossilized claw was the remains of a dinosaur. He named it 'Iguanodon'.

THE END OF THE DINOSAUR AGE

For a long time, people believed that the dinosaurs were a separate group from all other animals. But in the 19th century, scientists discovered that dinosaurs were actually a group of animals that had evolved from other animals.

THE DINOSAUR AGE was a time when dinosaurs were the dominant animals on Earth. They lived for about 165 million years.

THE END OF THE DINOSAUR AGE was a time when dinosaurs were the dominant animals on Earth. They lived for about 165 million years.

THE DINOSAUR AGE was a time when dinosaurs were the dominant animals on Earth. They lived for about 165 million years.

THE END OF THE DINOSAUR AGE was a time when dinosaurs were the dominant animals on Earth. They lived for about 165 million years.

EARLY IDEAS ABOUT EVOLUTION

How long is a million seconds? Have you been alive for one billion seconds? What was happening a million days ago? We find it very difficult to comprehend these huge numbers. If we don't have a feel for how long a million seconds is, how can we possibly comprehend time spans of millions or billions of years? This is one reason why some people have a problem with evolution. The idea that single, primitive cells evolved into all the species that have ever lived seems incredible, unless you get to grips with the timespans involved.

In ancient Greece, philosopher Anaximander suggested that one type of animal could change into another, while Empedocles thought that new types of living things could be made from a range of parts that already existed.

Theologians Gregory of Nazianzus and Augustine both thought that although God had created all the original animals and plants, new types had developed from them. Their ideas were in response to the practical problems that would have arisen from trying to get two of everything into the Ark.

The naturalist George-Louis Leclerc proposed a way for the Earth to have formed from debris in space. Although he believed in spontaneous generation, he thought that animals could change as they migrated to different conditions. This later explains the discovery of elephant fossils in North America, and mammoth fossils in Siberia, although living elephants are today only found in Africa and South Asia. He suggested the American ones had become extinct, while the mammoths had changed as they migrated south.

Erasmus Darwin was Charles Darwin's grandfather. He was a doctor, poet and naturalist, and in his book 'Zoonomia, or: The Laws of Organic Life' he was one of the first people to propose a theory of evolution. He never hit on the idea of natural selection, but did recognise the importance of sexual selection (see page 59) and realised it could cause changes in species.

GRADUAL CHANGES

In the early 1800s Jean-Baptiste Lamarck, inventor of the terms 'invertebrate' and 'biology', was the first person to develop a coherent theory of the development of life on Earth and its evolution. He believed that life had originated by spontaneous generation, rather than creation by deity, and had then become more complex and varied over many generations. Lamarck suggested how this could happen. His idea is often called the 'Theory of Evolution by Acquired Characteristics'. In simple terms, he thought that the more an animal used an organ during its lifetime, the more well-developed it would become and that these changes could be inherited by offspring if both parents had the same developments.

THE EVOLUTION OF THE GIRAFFE'S NECK, ACCORDING TO LAMARCK:

- 1) Early giraffes had short necks.
- 2) Giraffes reach upward to graze on leaves.
- 3) This stretches their necks very slightly over their lifetimes.
- 4) The next generation of giraffes inherits these slightly longer necks.
- 5) This process is repeated over many generations until we arrive at modern, long-necked giraffes. Lamarck was not suggesting that their necks suddenly shoot out like telescopic poles!

THE PROCESS ALSO WORKED THE OTHER WAY:

- 1) Early penguins had wings with which they could fly.
- 2) Penguins spend most of their time swimming and very little flying.
- 3) Their wings become smaller, with smaller feathers, from lack of flying.
- 4) The next generation of penguins inherits these smaller, more flipper-like wings.
- 5) This process is repeated over many generations until we arrive at the modern penguin, which can no longer fly and whose wings are now adapted to help it swim instead.

An exploration of rivers with fold-out pages

- A stunning look at geography, exploring the physical features of rivers, the unique wildlife they support and how they have shaped human history.
- Featuring 6 mighty rivers from around the world, one from each continent
- CONTENTS: A World of Rivers; Where do rivers get their water?; Source; Heading Downhill; Waterfalls; Underground Rivers; Gorges; Rapids; Dams; The Danube; Around the Bend; River Life; River Highway; The Ganges; Making Lakes; The Amazon; River City; The Murray; Extraordinary Rivers; Floating Islands of the Sudd; The Nile; Deltas; Estuaries; The Mississippi; Mangroves; Salmon Run
- Includes fold-out pages throughout
- Cover treatment: matt lam + spot UV + 5th colour

This visually extraordinary book presents the history of money as it has never been seen before - from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

DIFFERENT KINDS OF MONEY

Money serves because it is traded, but this trade doesn't come out of nowhere. It has to be based on something. There are several reasons why money might be valued. Some money is traded because it is made of something valuable, such as gold or silver. This is called **commodity money**. Another kind is traded because it represents something valuable. This is called **representative money**. A third kind is traded simply because a government tells it is valuable. This is called **fiat money**.

COMMODITY MONEY

The earliest form of commodity money was cowrie shells. They were small, round, and easy to carry. They were used in many parts of the world, including the Indian subcontinent and the Pacific Islands. Commodity money is made from things that have value in themselves. It can be used to buy things, and it can be traded for other things. Commodity money is often used in places where there is no government, or where the government is weak. It is also used in places where the government is not trusted.

REPRESENTATIVE MONEY

The earliest form of representative money was gold coins. They were made of gold and had a picture of a king or a queen on them. They were used in many parts of the world, including Europe and the Middle East. Representative money is made from things that have value in themselves, but it is not the thing itself. It is a piece of paper or a metal coin that represents the thing. Representative money is often used in places where there is a government, and where the government is trusted.

FIAT MONEY

The earliest form of fiat money was paper money. It was made of paper and had a picture of a king or a queen on it. It was used in many parts of the world, including Europe and the Middle East. Fiat money is made from paper and has no value in itself. It is only valuable because a government tells it is. Fiat money is often used in places where there is a government, and where the government is trusted.

A WORLD WITHOUT MONEY

To understand why money is useful, let's try to imagine a world without money. In such a world, the only way to get hold of the things you need would be to make or grow them, or steal them from other people. These people are called **barter**. They trade things, so you will have to offer them something in return. This system is known as barter. The exchange of goods or services for other goods or services without using money.

BARTER AND GIFTS

Barter is the exchange of goods or services for other goods or services without using money. It is a system where people trade things they have for things they need. For example, a farmer might trade wheat for a blacksmith's services. Barter is often used in places where there is no money, or where the money is not trusted.

THE PEOPLES WITH BARTER

The earliest form of barter was used by the people of the Amazon. They traded things like fish for things like fruit. They also traded things like tools for things like food. Barter is still used in many parts of the world, including the Amazon and the Pacific Islands.

COMMODITY OF WANT

Barter is often used in places where there is a commodity of want. This means that there is a thing that everyone needs, but that only one person has. For example, a farmer might have wheat, but only one person has a blacksmith. The farmer needs the blacksmith's services, but the blacksmith needs the farmer's wheat. They trade things to get what they need.

WHAT MAKES A GOOD FORM OF MONEY?

The earliest forms of money were very different to the money we use today. There was no paper or printing process or machines to make money like bank notes. People had to make the things they traded in the natural world. All of the first forms of money were made of things that were easy to trade. The problem was, not all people traded the same things, so it was difficult to trade with everyone.

COMMODITY MONEY

Commodity money is made from things that have value in themselves. It can be used to buy things, and it can be traded for other things. Commodity money is often used in places where there is no government, or where the government is weak. It is also used in places where the government is not trusted.

REPRESENTATIVE MONEY

Representative money is made from things that have value in themselves, but it is not the thing itself. It is a piece of paper or a metal coin that represents the thing. Representative money is often used in places where there is a government, and where the government is trusted.

FIAT MONEY

Fiat money is made from paper and has no value in itself. It is only valuable because a government tells it is. Fiat money is often used in places where there is a government, and where the government is trusted.

QUIRKY CURRENCIES

Many unusual objects were used as money in the era before notes and coins. These included foodstuffs such as barley, rice, corn and wheat. The Chinese used tea bricks to pay for things, whereas the Aztecs used cacao beans, and the peoples of ancient Africa and the Middle East measured value in coffee beans. The Mesopotamians kept sacks of grain in protected barns, much like the banks of today. When stored carefully, these foods could provide a reasonable store of value. But a storm or a bad harvest could wipe out your wealth.

MONEY YOU CAN EAT

Some surprising foods have been used as units of exchange in different parts of the world. Here are some of them.

BUTTER

The Pilgrims of the island of Nauru used butter for exchange. They used it to buy things like tools and food. Butter was a valuable commodity because it was easy to store and transport.

CHEESE

In the early 1800s, the people of the island of Nauru used cheese for exchange. They used it to buy things like tools and food. Cheese was a valuable commodity because it was easy to store and transport.

EELS

Dried and smoked eels were used as money in the island of Nauru. They were used to buy things like tools and food. Eels were a valuable commodity because they were easy to store and transport.

COCONUTS

For the Kusa Yaku, who live on islands off the coast of Papua New Guinea, coconuts were used as money. They were used to buy things like tools and food. Coconuts were a valuable commodity because they were easy to store and transport.

EGGS

When the people of the island of Nauru used eggs for exchange. They used them to buy things like tools and food. Eggs were a valuable commodity because they were easy to store and transport.

BREAD

In the early 1800s, the people of the island of Nauru used bread for exchange. They used it to buy things like tools and food. Bread was a valuable commodity because it was easy to store and transport.

POTATO MASHERS

In ancient Cameroon, potato mashers were used as a currency. These heavy iron objects, called ensusbas, were shaped like a club.

KISSI PENNIES

The kissi penny was a currency used mainly in West Africa in the first half of the twentieth century. They were long iron rods, usually arranged in bundles of twenty. A cow could be bought for 30 or 40 bundles.

IRON SNAKES

The Lobi tribe of Burkina Faso used iron snakes as a currency. They would also attach them to their calves as a protection from snake bites and lightning.

KNIVES

Large bronze knives circulated as currency in ancient China between 600 and 200 BCE. According to one story, this started when a prince who was running low on money to pay his troops allowed them to use their knives to pay for goods in the local village.

RAI STONES

The small Pacific island of Yap possesses the world's biggest money. Rai stones are huge discs of rock weighing up to 8 tonnes each. The stones are rarely moved, and are not used for day-to-day transactions, but they change hands as ceremonial gifts, to forge alliances, resolve conflicts or to apologise for wrongdoing.

Escape Castle Dracula

A stunningly illustrated gothic puzzle adventure!

- Expanding our high-end activity offering - a core part of the Big Picture Press list
- Perfect for introducing readers to classic horror stories
- A fresh approach to an evergreen, universal subject
- Adam Allori's immersive artwork will appeal to readers of all ages
- Strong backlist and series potential - our follow up title could focus on classic adventure stories

A stunningly illustrated tribute for train lovers of all ages, celebrating the ingenuity of trains past, present and future.

- Sample contents: The First Railways; Steam Locomotions; The Ffestiniog Railway; The Orient Express; Freight Trains; The Baikonur Cosmodrome; Mail by Rail; The California Zephyr; Mountain Railways; The Darjeeling Himalayan Railway; Trams; Sky Lines; Railways At War; The Princess Christian; High-speed Rail; The Shinkansen
- Beautiful artwork by multi award-winning artist Ryo Takemasa
- Stunning journey through the history of locomotives, suitable for all ages
- Expertly written by railway historian, Alastair Steele

Locomotion

THE FIRST RAILWAYS

Today, railways are commonplace in many parts of the world. They enable around one billion people, up across our continents, and transport goods and millions of passengers every single day. It is amazing to think that they have only been around for less than two hundred years.

Railways appeared long before the first steam engines were invented. These 'rudest' appeared in Europe during the 17th century and were designed to haul heavy loads. They were made of wood and iron. The wheels were made of wood and the rails were made of iron. The rails were made of iron and the wheels were made of wood.

The first steam engines were used in Britain during the 17th century to pump water to water-lifting devices, and in 1802 the Scottish inventor James Watt built the first steam engine locomotive.

Over the last few hundred years, the steam engine has become one of the most important inventions in the world. It has changed the way we live and work. It has made it possible for us to travel long distances in a matter of hours. It has made it possible for us to transport goods and people across the world. It has made it possible for us to build cities and towns in remote areas. It has made it possible for us to live in a more comfortable and convenient way.

Puffing Bluff used to be a railway in the 19th century. It was built by the Duke of Devonshire. It was used to transport coal from the mines to the town of Puffing Bluff. It was a very important railway at the time. It was one of the first railways in the world. It was built by the Duke of Devonshire. It was used to transport coal from the mines to the town of Puffing Bluff. It was a very important railway at the time. It was one of the first railways in the world.

THE GAUGE

One of the earliest and most significant developments in railway engineering was the invention of the gauge. The gauge is the distance between the rails. It is the distance between the rails that determines the size of the wheels and the rails. It is the distance between the rails that determines the size of the wheels and the rails. It is the distance between the rails that determines the size of the wheels and the rails.

The standard gauge was first used in Britain. It was used by the first railway, the Stockton and Darlington Railway. It was used by the first railway, the Stockton and Darlington Railway. It was used by the first railway, the Stockton and Darlington Railway.

STEAM LOCOMOTIVES

Once the possibility of mass-produced engines had been realized, a whole host of locomotives were tried and tested around the world. Some proved to be better, others less suitable and some were even dangerous, but the arrival of one revolutionary design changed the course of history. Another, designed by engineer Robert Stephenson (George Stephenson's son - see page 51) was to provide the principles of design for the rest of the century of steam locomotives that followed.

It was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway.

The first steam engine to be used on a railway was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway.

The first steam engine to be used on a railway was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway. It was the first steam engine to be used on a railway.

- RAILWAYS OF THE WORLD - THE FESTINIING RAILWAY

The Festiniog railway in North Wales is a marvel of 19th century engineering. It was built in 1825 and is the only railway in the world that is still in operation. It was built in 1825 and is the only railway in the world that is still in operation. It was built in 1825 and is the only railway in the world that is still in operation.

The Festiniog railway in North Wales is a marvel of 19th century engineering. It was built in 1825 and is the only railway in the world that is still in operation. It was built in 1825 and is the only railway in the world that is still in operation.

ELECTRIC LOCOMOTIVES

The first electric train was tested as far back as 1837. Unlike steam trains, electric locomotives do not carry fuel on-board. Instead, they are powered by electricity which can be supplied from overhead lines, a third rail or in storage such as batteries. Because electric trains can be powered by renewable energy sources, they are considered less polluting than steam or diesel trains.

The first electric passenger train was presented by Werner von Siemens at an exhibition in Berlin in 1879. Consisting of a small locomotive and three cars, it reached a speed of just 13km/h.

The ETR 200 is a record-breaking electric passenger train. It is widely considered one of the first ever high-speed trains and was put into service in 1936. In 1938, it broke the speed record for trains by reaching just over 201km/h.

The ICE (Intercity Express) is one of Germany's most successful electric trains. The third generation ICE 3 can reach speeds of 300km/h. Since 2018, it has run on entirely renewable energy sources.

DIESEL LOCOMOTIVES

In a diesel locomotive, the power comes from an engine that burns diesel oil. While a steam locomotive needed two people to crew it and hours to attain the right steam pressure, a diesel locomotive could simply be switched on and driven away, making them much easier and much cheaper to run. Rudolf Diesel patented his first diesel engine in 1898, but it wasn't until around 1912 that they were first used in a locomotive.

The famous DRG Class SVT 877 *Hamburg Flyer*, often referred to as the 'Flying Hamburger', was first put into service in 1933. Its smooth, rounded shape was influenced by Zeppelin airships allowing for minimal air resistance.

The De10s, built in 1956, was considered the most powerful diesel locomotive in the world at that time.

The Hxdvity 125 is one of the most successful diesel trains of all time. So named because it was designed to cruise at 125 mph (about 201km/h) when in service, it also holds the all-time speed record for diesel trains of 238km/h, which it reached in 1987.

On The Streets of New York

A vibrant and collectable new series celebrating cities around the world - starting with New York.

- Beautifully presented and produced - with strong branding and a collectable feel.
- Each spread will act as a snapshot of a different part of the city. Non-fiction spreads at the back of the book will add further information about landmarks and history.
- Each book will be written by a poet from the city - who will be able to celebrate the hidden parts of the city, as well as the main landmarks.
- Paris proposed as book two
- Aimed at ages 7+ - perfect for reading aloud together.

Insectarium

Dragonflies, Damselflies and Mayflies

The ancestors of dragonflies were the first insects on Earth to fly, around 300 million years ago. Unlike most insects, dragonflies have a very long life span. Some species, like the damselfly, live for several years, while others, like the dragonfly, live for only a few weeks. They are also very good swimmers and can fly very fast. Dragonflies are also very good at catching insects, and they are very good at flying over water. They are also very good at flying over land. They are also very good at flying over the sea. They are also very good at flying over the mountains. They are also very good at flying over the desert. They are also very good at flying over the rain forest. They are also very good at flying over the tundra. They are also very good at flying over the ice. They are also very good at flying over the snow. They are also very good at flying over the clouds. They are also very good at flying over the sky. They are also very good at flying over the sun. They are also very good at flying over the moon. They are also very good at flying over the stars. They are also very good at flying over the planets. They are also very good at flying over the galaxies. They are also very good at flying over the universe.

Butterflies

Butterflies are the most diverse group of insects on Earth. There are over 170,000 species of butterflies and moths. They are found in almost every part of the world. They are also very colorful and beautiful. They are also very good at flying. They are also very good at catching insects. They are also very good at flying over water. They are also very good at flying over land. They are also very good at flying over the sea. They are also very good at flying over the mountains. They are also very good at flying over the desert. They are also very good at flying over the rain forest. They are also very good at flying over the tundra. They are also very good at flying over the ice. They are also very good at flying over the snow. They are also very good at flying over the clouds. They are also very good at flying over the sky. They are also very good at flying over the sun. They are also very good at flying over the moon. They are also very good at flying over the stars. They are also very good at flying over the planets. They are also very good at flying over the galaxies. They are also very good at flying over the universe.

Bees

Bees are the most important insects on Earth. They are found in almost every part of the world. They are also very colorful and beautiful. They are also very good at flying. They are also very good at catching insects. They are also very good at flying over water. They are also very good at flying over land. They are also very good at flying over the sea. They are also very good at flying over the mountains. They are also very good at flying over the desert. They are also very good at flying over the rain forest. They are also very good at flying over the tundra. They are also very good at flying over the ice. They are also very good at flying over the snow. They are also very good at flying over the clouds. They are also very good at flying over the sky. They are also very good at flying over the sun. They are also very good at flying over the moon. They are also very good at flying over the stars. They are also very good at flying over the planets. They are also very good at flying over the galaxies. They are also very good at flying over the universe.

What is an Insect?

The earliest insects appeared on Earth about 480 million years ago. To put this in perspective, we humans have been around for barely one million years, and the first dinosaurs appeared 230 million years ago.

Insects are part of a larger group of creatures including millipedes, centipedes, spiders, scorpions, crabs and shrimps, collectively known as the arthropods. They all have an external skeleton; a more or less rigid 'shell' with muscles attached on the inside. To grow, arthropods have to repeatedly shed their skeleton, which is a delicate business and leaves them soft and vulnerable for a short time.

Insects are the only arthropods to have three pairs of legs. Their body is divided into three segments: the head, thorax and abdomen. The head has eyes, a mouth and a pair of sensory antennae that taste the air. The legs and wings, if present, are attached to the thorax, which is often filled with muscles to move them. The abdomen contains the gut and reproductive organs. Other arthropods, including arachnids, crustaceans, millipedes and centipedes are not considered insects due to differences in leg count, antennae presence and body structures.

Nearly all insects start as eggs. Most undergo complete metamorphosis which means they completely change their physical appearance, transforming from a larva to the adult insect by way of a pupal phase (see page 68). In more primitive insects, such as mantids, grasshoppers, true bugs and stick insects, the life cycle is similar to many other arthropods – the adult female lays eggs, which hatch into 'nymphs'. These nymphs look roughly similar to the adults, other than being much smaller and with tiny wing buds rather than wings. All arthropods must shed their exoskeleton (skin) to grow, so the nymphs proceed through, typically, five to seven stages until they reach adult size. This life cycle is known as 'incomplete metamorphosis'.

Key to plate

1) Slag beetle (male)
Lucania crassa
Length 16 to 20mm
The slag beetle has the characteristic features of insects: three body segments, one pair of antennae, three pairs of legs and two pairs of wings although the hind wings are kept hidden beneath the modified and hardened forewings.

2) Head
In males the huge jaws are used for fighting other males rather than for feeding. Females are rarely distinguished.

3) Antenna
Antennae detect chemicals in the air. They may be used to sniff out food or mates.

4) Compound eye
Insect eyes are made up of hundreds of individual facets. Some insects that need better vision, such as dragonflies, have much larger eyes.

5) Leg
The feet are tipped with claws for grip.

6) Elytron
In beetles, the first pair of wings has evolved into a hardened case, under which the hind wings are folded.

7) Thorax
Larger than the head, it is used to power the wings.

8) Abdomen
This contains important organs like the digestive and reproductive systems.

Welcome to the Arts: Dance

TIMES BEST CHILDREN'S BOOKS OF 2023!

- The first title in the new dazzling new Welcome to the Arts series.
- The perfect gift for anyone who is a fan of *Strictly Come Dancing* or *Dancing With the Stars*
- Phenomenal immersive artwork by multi award-winning artist, Jason Raish
- Expertly written, lively text by Sadler's Wells CEO, Sir Alistair Spalding
- Published in conjunction with Sadler's Wells Theatre - one of the world's leading dance organisations
- Beautiful large format artwork makes the reader feel they are really there

Terra Ultima

This extraordinarily illustrated book documents the strange new world of Terra Ultima for the very first time...

- Incredible lifelike artwork, unlike anything you've seen before!
- A phenomenal exploration of a new fantasy world
- Winner of the 2022 Golden Paintbrush award - one of the Netherlands biggest children's literary prizes.
- This beautiful paperback edition includes 100% gold foil, 4C printing and flaps
- **Celebrating 10 years of extraordinary illustrated books**

Explore the legendary world of fairies in this this stunningly illustrated guide to the mythical realm.

- An incredible collection of fairies to be enjoyed by children and adults alike.
- *Faedom* also includes facts about the natural world including lunar cycles, astrology, crystal healing and herbology, bringing the world of fairies to life.
- Stunning ethereal artwork by debut talent Nadzeya Makeyeva.
- Large format and foil cover finish makes this the ideal gift.
- Agnes Monod-Gayraud is an award-winning translator and editor. Lorna White is a writer and researcher whose focus and expertise is in Ancient Mythology and Folklore.
- **Celebrating 10 Years of Extraordinary Illustrated Books**

Tales of the Damned

An anthology of terrifying tales from around the world.

- Stories will be broken up with a series of 'theme' spreads, which will add a non-fiction element to the book. These spreads cover everything from the rise of the horror genre to famous monsters and vampire mass hysteria.
- There's a gap in the market for striking, beautifully illustrated horror anthology.
- Contents: The Mask of Red Death by Edgar Allen Poe; Edgar Allen Poe and the Birth of Horror Literature (NF); Dracula; Vampire Mass Hysteria (NF); The Monkey's Paw; Zombies and the Undead (NF); Red Riding Hood; The Original Dark Fairy Stories (NF); Frankenstein; Mary Shelley and the impact of Frankenstein (NF); Whistle and I'll Come To You; Ghosts and the Victorians (NF); Baba Yaga; Witches (NF); Bluebeard; Blood and Gore (NF)

Tales from Beyond the Stars

An anthology of classic science fiction stories.

- Stories will be broken up with a series of 'theme' spreads, which will add a non-fiction element to the book. These spreads cover everything from the rise of the science fiction genre to how it has inspired real life inventions.
- There's a gap in the market for a striking, beautifully illustrated science fiction anthology.
- Evergreen publishing with strong backlist potential and global appeal.
- An opportunity to expand the Big Picture Press list into the adult gift market.
- Resurgence of interest in titles that offer readers 'escapism' on TikTok, including fantasy and science fiction

Tales from Beyond the Stars

starting towards Kensington Gardens, wondering at this strange, red-walled wall. It was as if that mighty desert of houses had found a voice for its fear and solitude.

Drawn by the sound, I crossed the river at Waterloo Bridge, littered with corpses, and wandered on through the silent streets until I came out at last upon Regent's Park. And as I emerged from the top of Baker Street, I saw far away over the trees in the clearness at the sunset the hood of the Martian giant from which this howling proceeded. I was not terrified. I came upon him as if it were a matter of course. The tripod did not move. The Martian appeared to be standing and yelling, for no reason that I could discover.

Regents canal was choked with the red weed, and it had spread across the grasses and was growing amongst the trees, a spongy mass of dark-red vegetation. As I stood watching, the sound of "Ulla, ulla, ulla, ulla," ceased. Cut off. The silence came like a thunderclap.

A terror seized me. The dusky houses about me stood faint and tall and dim; the trees in the park were growing black. Night, the mother of fear and mystery, was coming down.

I fled. In front of me the road became pitch black as though it were covered in tar, and I saw a contorted shape lying across the pathway. I could not bring myself to go on. I turned down St. John's Wood Road and ran headlong from this unendurable stillness towards Kilburn. I hid from the night and the silence, until long after midnight, in a cabmen's shelter in Harrow Road.

Before the dawn my courage returned, and while the stars were still in the sky I turned once more towards Regent's Park. I had to know what had happened to the tripod.

As I drew nearer and the light grew, I saw that a multitude of black birds was circling and clustering about the hood. At that my heart gave a bound, and I began running along the road.

Street Style: Dr. Martens

Visual history of the iconic street style brand.

- Illustrated with full colour photographs showcasing the brand's history.
- Cover finishes: mat lam and foil.
- Written by Jian DeLeon, the editorial director for Highsnobiety. Jian is an expert on the intersection of streetwear, sneakers and luxury fashion. He co-hosts 'The Dropcast', Highsnobiety's weekly news podcast,

Street Style: Dr. Martens

The Spring Behind Every Step

It's hard to believe that an orthopedic shoe could be synonymous with rebellious style around the world. Yet that is what the Dr. Martens brand continues to represent to millions of its ardent fans.

It can be challenging to maintain one's cool factor over the decades, but by intentionally aligning itself with subcultural style, the nearly octogenarian footwear manufacturer hasn't lost a single step when it comes to cultivating an alternative type of timeless footwear. Considering the United Kingdom also has a rich history of fine Savile Row tailoring, Scottish wools and ruggedly elegant Harris Tweeds, fashion houses like Burberry and tastefully tough outerwear from brands like Barbour, Dr. Martens is singular in that canon of classic British style. Indeed, Dr. Martens is a staunch iconoclast, a bastion of anti-establishment ideals for people who prefer to dress against the grain.

But despite the modern connotation of what Dr. Martens has become, its roots are built on a comfortable foundation. Doctor Klaus Maertens first conceived of the footwear's signature "AirWair" sole while recuperating from a World War II foot injury.

Finding his standard-issue German Army boots severely uncomfortable for his ailing foot, he utilised soft leather for

6

the upper and repurposed tyre rubbers to create an air-padded sole. The resulting shoe is equal parts built to last and equal parts built to live in. It's no wonder that punk rockers and hip-hop artists alike have graced thousands of stages in a pair of Dr. Martens over the years - it's a shoe made for those who live out loud. The story of how a purpose-driven product came to define one of today's most exciting lifestyle brands is one that spans a growing connection between clothing and culture. When you combine a timeless product with a chameleon-like ability to mean different things to different people, you get a shoe that is undeniably trend-proof.

ABOVE: A classic pair of Dr. Martens 1460 boots, broken in with wear.

7

NOT FINAL

Who Was Dr. Martens?

Dr. Martens may not be a real person, but Dr. Klaus Maertens certainly was. The brand as we know it today began with him. A doctor in the German Army, he found himself in post-war Munich at the age of 25, nursing a broken foot. The year was 1945, World War II had just ended, but his injury was one he earned from an unfortunate riding accident.

As he was recovering from his injury, he found that the standard issue, leather-soled Schürzenhaube lowboots that had been part of the German Army uniform since 1937 actually hurt his feet more than helped them. Unconquering and footless styles were undergoing a similar shift. It had been a little more than a century since the Industrial Revolution had commercialised the footwear industry, allowing for mass production for a craft that was once exclusively handmade. Concrete sidewalks were being made where it came to what was happening in the world of vacuumed soles.

American chemist Charles Goodyear discovered that heating up rubber and adding sulphur made it even more flexible. The vulcanised process had many industrial applications, but it also made it much easier to make durable, rubber-soled shoes. Yet while canvas plimolls and burgeoning sneaker companies like Converse explicitly were meant for athletic pursuits, Maertens saw an opportunity in making a shoe that had the classic, down-toy appeal of a military boot, combined with the comfort and orthopedic benefits of a rubber sole.

OPPOSITE: Dr. Klaus Maertens, creator of the original Dr. Martens boot.

8

NOT FINAL

The first prototype of what would become the Dr. Martens 1460 leather boot took design elements from the German Schürzenhaube and set it on top of a unique, air-cushioned sole originally made from heat-treated, repurposed tyre rubber. He made his proof-of-concept using a salvaged cobbler's last and a needle, but it would still take a couple of years before his brand's now shoe business got any proverbial legs behind it.

OPPOSITE: Standard issue German army field boots from World War II that were used to inspire Dr. Martens shoes.

Tiffany & Co.: The Story Behind the Style

The King of Diamonds: Charles Lewis Tiffany

Charles Lewis Tiffany, the man who would go on to win the moniker of New York's 'King of Diamonds', did not hail from a long line of jewellers. His start in life was more modest, making his name in high society all the more glittering.

Tiffany was born in 1812 in Canton and Ohio. Tiffany and grew up in the small town of Killbuck, Connecticut. The major business of the town was the production of cotton goods, and the family owned a manufacturing company. Tiffany was educated at local schools in the area before joining his father in the family cotton business.

By 1837, Tiffany felt restless. No longer satisfied by working at home with his family, he began to envision how he could make his own mark in business. He turned up with a school friend, J. R. Young, and the duo set in motion a plan to open a stationary store in New York City. With a \$1,000 loan from Charles' father, the ambitious 25-year-olds made the 150-mile journey north. The store, named Tiffany & Young, opened its doors at 259 Broadway that same year, and on its first day, \$4,981 rang through the till.

Tiffany & Young soon began to expand its remit, stocking glassware, silver, porcelain, clocks and jewelry, and began to develop a

OPPOSITE: Tiffany & Co. founder Charles Lewis Tiffany photographed by James Thomson Beach in 1902.

reputation as a purveyor of fine goods of taste. In 1841, the business expanded with the addition of a third partner, J. L. Ellis, and was renamed Tiffany, Young & Ellis. The trio expanded the store, doubling its size by moving the adjacent site, and continued to increase the quality of the goods they sold, with Young making buying trips to Europe to pick out English and Italian jewelry.

It was, in fact, political events in Europe that would be the making of this American luxury success story. In 1848, the status quo crumbled as republican revolutionaries sought to topple European monarchies and strip aristocrats of their power and wealth. It was a societal upheaval known as the Springtime of Nations. More than 50 countries were inspired by this, but none more so than France, where the monarchy was overthrown and replaced with a republic. Such widespread panic and disruption had an impact on the price of diamonds, and Tiffany, Young & Ellis reaped, by now, the full

OPPOSITE: An illustration of a window display at the Tiffany & Co. in New York.

OPPOSITE: A sketch of the Tiffany & Co. store at the Excelsior Hotel in Paris in 1902.

In 1853, Young and Ellis decided to retire from the business, but Charles Lewis Tiffany was far from finished. He found new partners to work with, and the business was, at this point, renamed Tiffany & Company. Tiffany would go on to build his empire, grabbing headlines along the way. By the 1860s, the business was well established as an importer of choice for the rich and the famous, both for its jewelry and its top-quality silver. In 1862, President Abraham Lincoln purchased a set of pearl neckties and earrings from Tiffany & Co. for his wife Mary Todd Lincoln, who wore them to her husband's inauguration ball.

In 1870, Tiffany & Co. moved into a large new store in New York's Union Square, marking the beginning of a major decade for the jeweller one in which Charles Lewis Tiffany would earn the title of King of Diamonds. It was a single purchase that would truly justify Tiffany's name: the high-jewellery masterpiece – a 237.42ct rough fancy yellow diamond. When cut and polished, what emerged was a diamond of staggeringly enormous proportions for a rare yellow diamond of that quality: it weighed 128.58ct and was named the Tiffany Diamond.

If the purchase of this rare world-famous stone, which is on permanent display at Tiffany & Co.'s Fifth Avenue store in New York, signalled Tiffany's intention to dominate the diamond market, his groundbreaking invention eight years later sealed the deal. Seeking to

celebrate the beauty of diamonds, Tiffany designed an engagement ring in 1886 that remains a sought-after classic to this day. The Tiffany Setting engagement ring kicked back against the over-fussy designs of the time with a clean, minimalist band and a six-prong setting that lifted the diamond above the ring. The purpose for this innovative setting was to allow light to flow through the stone, and therefore maximise the sparkle. It was a huge hit, and the iconic design has become synonymous with engagement rings.

Just 15 years before his death, Tiffany pulled off a final coup. The aftermath of the French Revolution that had gifted Tiffany an abundance of important gems in 1848 and its early credibility in high-jewellery circles rumbled on. In 1887, the French government was masterminding a plan to sell the crown jewels of its fallen monarchy. Outwardly, it claimed that a democracy such as France had no need for "objects of luxury, devoid of usefulness and moral worth". The rumour mill suggested that it was in fact afraid of a power grab by Bourbons, Orleanists or Bonapartists, who might use ownership of the jewels to claim a right to rule. Tiffany cared little for this political posturing, but he did see an opportunity in it. He travelled to Paris to attend the auction of the French crown jewels at the Louvre. He sat in the audience, ready to make his bids, along with fellow jewellers, including a young Frédéric Boucheron, and Orleanists, members of the French royal family, whose pockets proved too shallow on the day to win back their family heirlooms.

When the final strike of the gavel fell, Charles Lewis Tiffany had in his possession close to a third of the historic crown jewels. He placed them in specially crafted red-leather boxes, embossed in gold with the words *Diamants de la Couronne*, translating from French as Crown Diamonds. Inside, impressed on the silk lining in the lid, was Tiffany & Co. New York and Paris, thus securing Tiffany & Co.'s place in the history books as a purveyor of royal jewels and his own coronation as the King of Diamonds.

Rolex: The Story Behind the Style

PROVIDER: Hans Wilsdorf, the founder of Rolex.
 RIGHT: Representatives of watch firms in Geneva in 1908.

more wearable product would one day make the larger pocket watch obsolete. He set about trying to change the image of wristwatches.

A fundamental step was finding a manufacturer called Angler in the Swiss town of Bienne that was making precision movements that could fit inside a wristwatch. Wilsdorf placed a large order, and soon Wilsdorf & Davis became one of the leading British wristwatch firms.

In a bid to establish his business as a brand rather than simply a dealer, Wilsdorf wanted to create a new name for the company: a catchy one that would look good on a dial and be easy to pronounce in many languages. He had experimented with many combinations of letters in search of this made-up name but failed to find anything that worked. Then, while riding through London's Cheapside on the upper

deck of a horse-drawn in 1908, it came to him. Or as he would later just "A gentleman whispered 'Rolex' in my ear."

Under this new name, Wilsdorf continued his quest to create reliable wristwatches with quality movements. In 1910, Rolex had a breakthrough when one of its products, powered by an Angler movement, became the first wristwatch in the world to receive the Swiss Certificate of Chronometric Precision – a mark of homological excellence. Four years later, another milestone would be achieved when the Kew Observatory in London awarded a Rolex wristwatch with a Class A precision certificate. This had previously only been given to marine chronometers used for navigation, and it further solidified the reputation of Rolex as a purveyor of precise timekeeping instruments.

In 1916, World War I broke out, and the following year the British government introduced a 33.3% customs duty as part of the war effort. By this time, Rolex's London office, which had a staff of 60 people, was exporting its watches all over the world and the tax change would make that difficult. As such, Wilsdorf made the decision to move the company to Bienne in Switzerland. It already had an office in La Chaux-de-Fonds, which it opened in 1917 for marketing purposes, but this move would remove it from the British watch industry altogether.

And, so, the legacy of Rolex's Swiss-made watches began, with the Swiss company Rolex S.A. registered in Geneva in 1920.

OPPOSITE TOP: A watchmaker operating in Rolex's movement factory in Geneva in 1942. It took four days to make a pocket watch movement.
 OPPOSITE BOTTOM: A pocket watchmaker in the watchmaking industry in Geneva in 1908. It took four days to make a pocket watch movement.

The Origins of the Oyster

With Rolex settled into its new home in Switzerland, the company continued to develop its watch offering with a focus on precision and durability, as well as building its brand. Though certainly catchy, the name Rolex had not become an overnight success. Tired of waiting for it to catch on, Hans Wilsdorf launched a major marketing campaign in 1925, pledging to invest at least £12,000 a year – nearly £1 million in today's money. He also increased the number of watches Rolex was producing with its own branding on the dial, as it has been producing both branded and unbranded watches up until that time.

A major leap forward for Rolex's brand was the launch of the Oyster in 1926. This new style of watch promised to be waterproof and dustproof thanks to a hermetically sealed case, proving its durability. It also made it an obvious choice for sporting activities, which would prove to be a rich source of marketing for Rolex in the years ahead.

The Oyster case had a patented system of screwing down the bezel, crown and winding crown against the middle case to seal the movement inside securely. The winding crown, which is made from 10 individual parts, was key in its action as a go-between between the sealed inner world of the case and its functional external elements.

The Oyster case would become the backbone of Rolex. Nearly every watch in its contemporary range features an Oyster case, and the names of all the models reference it. A Submariner is technically named an Oyster Perpetual Submariner and a GMT-Master II is an Oyster Perpetual GMT-Master II, and so on. The only exception is the 1908 dress watch, which does not have an oyster case.

Rolex's iconic fluted bezel is a showstopper in the early Oyster cases. Although these fluted bezels are decorative now, the ridges originally served a purpose to allow a special tool to screw the bezel securely to the mid case.

OPPOSITE: A 1908 Rolex Oyster Perpetual on a brown alligator strap. ABOVE: A close-up of a Rolex Oyster Perpetual case and bezel base.

The World's Most Famous Watch Brand

Rolex has become shorthand for luxury. There is no watch you can strap on to your wrist that will be recognised for the status symbol it is quicker than a Rolex. And for many, this is the appeal.

Yet there was a time when the name Rolex – a word completely made up by the brand's founder Hans Wilsdorf – was not famous. It would take hard work, boundary pushing and a lot of self-belief on the part of Wilsdorf, a German orphan, to jettison the name into the upper echelons of horology; starting with convincing the pocket watch-wearing gentleman of the early 20th century that they wanted to wear the time on their wrist at all.

As you will discover, Rolex won its place in history by constantly questioning what was possible and innovating at all costs. It pioneered so many elements of watchmaking and design that are standard today, such as waterproof watches, placing a date window on the dial, and even removing the need to wind our watches.

It also found its way into some of the most exciting moments in history by placing Rolex watches on the wrists of adventurers and explorers. Its watches have travelled to the world's highest peaks and to the depths of the ocean; they have survived extremes of temperature, speed and pressure.

The story of Rolex is so much more than that of its watches. It is one of epic ambition and vision. What started out as a one-man band in London's Hatton Garden would become the epicentre of the Swiss watchmaking industry, and one of the most recognisable and coveted brands in the world.

Cartier: The Story Behind the Style

The story of iconic jewellery brand, Cartier

- Sample contents: The Beginnings of Cartier, Royal Affiliations, The First Men's Wristwatch, At the Heart of Art Deco, Inspiration from India, Stars and their Tanks, Mystery Clocks, Cartier's Jewellery Workshops, Glyptics, Fur Setting, Jeweller to the Stars, Red-Carpet Rocks, Love Bracelet, The New York Flagship, Cartier's Famous Red Box, Meet the Bellboys, Philanthropy, Continuing the Legacy, Ethical Supply Chain, Cartier Today and Tomorrow
- Written by Rachael Taylor, a journalist specialising in jewellery who has written for *The Financial Times*, Conde Nast publications and *Retail Jeweller*.
- Illustrated with full colour photographs from the brand's history
- Cover finishes: matt lam and foil

Cartier: The Story Behind the Style

The Beginnings of Cartier

The house of Cartier started with one man, Louis-François Cartier, but it would take a family to make it one of the most recognised and respected jewellers in history.

It was, in fact, Louis-François' father, Pierre Cartier, who set the dynasty in motion, although he could never have imagined the consequences of his actions at the time. Pierre had fought in the Napoleonic wars and spent time locked in the prison ships docked off the harbour at Portsmouth in Britain. When the war ended in 1815, Pierre returned to Paris, destitute and aimless. He would go on to find employment as a watchmaker and have five children with his wife Elisabeth, a watchwoman.

The eldest of the children born into this working-class Parisian family was Louis-François, and when he was barely out of school, his father sent him to work as an apprentice in a jewellery workshop owned by Adolphe Picard on Rue Montorgueil in Paris. It was a tough education – days were long and grueling and order was maintained with a whip – but he stayed and in 1847, at the age of 27, Louis-François bought the business from Picard, renaming it Cartier.

OPPOSITE: Cartier founder, Louis-François Cartier

His makers mark – a symbol hallmark that every piece of Cartier jewellery no matter how small – was his initials, L. C., separated with an arc of leaves playing golf, perhaps as a nod to the financial gamble he was taking. Luckily, the risk paid off and the Cartier business thrived and expanded. In 1866, Princess Mathilde, a cousin of Emperor Napoleon III, purchased one of his jewels, and the Cartier name was suddenly whispered among Parisian high-society, even reaching the international elite. Three years later, Louis-François bought Gillon, a Parisian jeweller better known than his own, and renamed his business Cartier Gillon.

Louis-François' son Alfred Cartier took over the family business in 1874, but it was the arrival of his own three sons – the highly ambitious Louis, Pierre and Jacques – that would really shake up the jeweller and initiate its ascendance to the global brand we know today. The brotherly revolution started with Louis, who joined the nation in 1898. A year later he spearheaded the remaining

OPPOSITE LEFT: An illustration of Louis-François Cartier c.1848.

OPPOSITE RIGHT: Pierre Cartier playing golf in Paris.

Cartier garnered a reputation for innovation, and the size of boutiques would later live by a motto, 'Never copy, only create'. One of Louis' most successful experiments in the close of the 19th century was to use platinum in place of gold. This precious metal is now widely used by jewellers across the world, but at the time it was purely an industrial metal and thus revolutionary in the jewellery market. The white metal, which, unlike silver, does not tarnish, is highly malleable and allowed Cartier to create delicate, diamond-set jewels inspired by those created by 18th-century French aristocrats, a stark contrast to the heavier, colourful, Romantic and Nouveau jewels popular at the time. A signature Cartier Gulland style emerged, swirling across platinum stems, necklaces and earrings, that won over well-to-do women, including royals, in Europe and the United States.

Pierre Cartier, the second eldest of the brothers, would be an agitator in his own right, championing the global expansion of the brand's retail empire. He started by opening a Cartier boutique on New Burlington Street in London in 1902, where the brand showcased a new style of geometric, abstract jewels with unusual colour combinations that would lay the foundations for the Art Deco jewellery movement.

The first decade of the 20th century was an important time for Cartier. In 1904, the jeweller received its first royal certificate from King Edward VII of Britain, and soon started to supply many other royal courts including those of Russia, Spain and Siam (now Thailand). In the same year, Louis Cartier created what he believed to be the first ever men's wristwatch for aviator Alberto Santos-Dumont.

Pierre, meanwhile, embarked on a journey to Russia; one that would prove profitable in commissions from its high society, but also as a source of inspiration that would shape Cartier's jewellery designs for years to come.

In 1909, Pierre would focus his wanderlust on America, opening a Cartier boutique on New York's Fifth Avenue; the precursor to its famous flagship store further up the street, the purchase of which he would famously broker a decade later in exchange for a string of pearls. Back in London, his younger brother Jacques stepped in to take over its British branch. That same year, Cartier moved uptown to a prestigious Bond Street address, where it remains to this day.

As Cartier's man in Britain, and, as such, jeweller to King George V, Jacques joined members of the aristocracy on a trip to India for the Delhi Durbar in 1911. It was an event

LEFT: Cartier platinum pendant watch set with diamonds, rubies and a pearl, c.1890-1910.

to commemorate the coronation of the King, with two weeks of festivities, during which King George V and Queen Mary would be proclaimed Emperor and Empress of India. This adventure to a new land would also prove to be a seminal trip for the house of Cartier. Jacques' sociable nature and love of travel would win ground-breaking commissions from India's rich, jewel-loving maharajas and inspire a whole new category of jewellery, pioneered by Cartier and much copied by other companies.

- Comp title The Little Book of Chanel has sold in excess of 61k copies TCM.

Vivienne Westwood: The Story Behind the Style

Derbyshire Days

Vivienne Isabel Swire was born on April 8 1941 to Gordon and Dora Swire at the Paragon Maternity Home, Glossop. The future fashion revolutionist had one sister, Olga Swire, born 1945, and one brother, Gordon Swire, born 1946. She grew up in the parish of Tintwistle, Derbyshire (which was formerly part of Cheshire until 1974), both during and after World War II, enjoying what has been recounted as a fairly idyllic childhood, living at the more secluded Millbrook Cottage and playing outside until late.

The young Swire clan were encouraged to be creative and make things more than they were encouraged to read. Vivienne knew from a young age that she was good at making things, notably models at school, and she especially enjoyed sewing classes. Her mother would often make their clothes, and worked as a weaver in a local cotton factory.

The young Vivienne – who remembers having a passion for art from an early age – attended Hollingworth and Tintwistle Primary Schools from 1946 to 1952, at which point she passed the scholarship exam for Glossop Grammar School. She continued to be good at art during her time at Glossop Grammar, and considered attending art school.

Among Westwood's most formative fashion memories are the make-do-and-mend philosophy that came to define

Britain in austerity, as well as the coronation of Queen Elizabeth II in 1953, when Vivienne was 12 years old. The influence of these two events can be seen throughout every era of her designs, and the make-do-and-mend philosophy is evident in the motto "Buy Less, Choose Well, Make it Last", which the brand still promotes to this day. She expertly blended the elements of customisation, tradition and antiretrograde together to create her own unique brand, which is now contrasted by her husband Andrew: *Konshalee*.

LEFT: Vivienne Westwood wearing a t-shirt sporting a 'Buy Less' slogan. Right

10

Malcolm McLaren

Westwood met Malcolm McLaren in 1965. An art student and a friend of her younger brother, Gordon, he would go on to become her creative collaborator for almost the next 20 years. Malcolm is an entrepreneur with the punk movement as Vivienne, and their partnership is legendary. He was something of a maverick of marketing strategy and distinction, before such things became commonplace in contemporary fashion. The pair were in a relationship for a time but never seem to have married.

Malcolm was interested in politics and was fascinated by the French Situationists, a creative enclave of writers and artists who wished to eradicate capitalism through acts of everyday life. He was a driving force in bringing politics, provocations, society and culture into Westwood's world. She found him to be charismatic and knowledgeable, but also full of contradictions.

In 1967, they had a son, Joseph Ferdinand Cecil, who would go on to follow in his parents' footsteps and enter the world of fashion. He founded the very successful lingerie company, *Agent Provocateur*.

It was in the early 1970s that McLaren and Westwood began to build their empire. Malcolm, in this period, had left art school and Vivienne was about to quit teaching. The plan had been to sell vintage records together, and there was talk of setting up a stall. But a retail opportunity – via a new

friend – on King's Road was about to arise.

Tommy Roberts, of the legendary Mr Freedom fashion business, took over the lease of 438 King's Road in 1969. He and his business partner, the fashion entrepreneur Trevor Miller, were well-known for their eclectic and discerning fashion eye which appealed to the glitterati of the 1960s. It was under Miller's control the shop was renamed *Paradise Garage*; the spot was already well-known for fashion.

Vivienne and Malcolm, who were regular on King's Road, ended up leasing the back of 438 King's Road, before taking the whole thing over and rebranding it. It would be known over the coming years as *Let It Beak*, *The Fun To Live*, *The Young To Die* and *Sex and Sublimation*, all of which would encompass the raucous, confrontational and non-conformist nature of McLaren and Westwood. Eventually the shop would come to define the varied-but-defined styles we know as punk today.

11

12

A Revolutionary is Born

There are few British designers, or brands, that have made quite as much of an impact on the fashion landscape as Vivienne Westwood. A fashion designer of both cult and commercial success (which is a rare combination), she was a punk and a pioneer, a rebel and a provocateur, an activist and a change-maker.

Over the course of a career that spanned half a century, Dame Vivienne Westwood would become synonymous with the British punk scene. Punk is what immediately springs to mind for most when her name is mentioned, along with the King's Road, corsets, platforms, tarran, crinolines, pirate boots, sustainability and climate change awareness. The list goes on. Her shows and interviews have become legendary – she is famous for using fashion as a platform to speak out on the issues she cared most about.

There is no doubt that Westwood's affinity for fashion history has helped her designs stand out. They are often historically informed, yet never to the point that they look odd. Where something shouldn't work, it always did, thanks to Vivienne's ability to balance the old with the modern – she was a genius when it came to style mashups. And the original Vivienne Westwood aesthetic rooted in a DIY approach never fully went away. Her designs feel intrinsically British and perfectly eccentric.

6

Westwood was the original multi-hyphenate and, in many ways, light years ahead of her time. She has inspired generations of designers that came after her, whether established and successful or aspiring and eager. Fashion critics even noted whiffs of her spirit at the London Fashion Week collections of autumn/winter 2023, which took place in February 2023, after her death. It's no wonder that her name is up there with the likes of Yves Saint Laurent, Christian Lacroix and the late great Karl Lagerfeld.

ABOVE: Vivienne Westwood takes her bow at the spring/summer 2018 London Fashion Week Men's collections, June 2017.

Disney Dreamlight Valley - The Official Guide

Official companion to the bestselling game.

- A mere ten days after its release in 2022, Disney Dreamlight Valley had attracted over one million players. As of January 2023, fans had played 76 million hours of Dreamlight Valley.
- Dreamlight Valley was awarded Best Early Access Game by PC Gamer in 2022.
- Dreamlight Valley can be played on Nintendo Switch, PlayStation 4, PlayStation 5, Windows, Xbox One, Xbox Series X/S and macOS. You can also play the Arcade Edition via Apple Arcade.
- Gameloft has released a 2024 Content Roadmap for Disney Dreamlight Valley, outlining exciting updates and additions to the game over the next twelve months. The game will continue to evolve, attracting new players as well as ensuring long-time players' attention is retained.

Disney Dreamlight Valley - The Official Guide

GEMS

Gems are rare minerals that can be sold to earn Star Coins, or used to craft a variety of decorative items from stoves to snow globes. You can gather gems by mining the rock spots around your valley with a pickaxe. Here's a handy guide for every gem, where you can find it and what it sells for.

	
Amethyst	Shiny Amethyst
Location: Forgotten Lands, Forest Heights Sells for: 500 Star Coins	Location: Forgotten Lands, Forest Heights Sells for: 2000 Star Coins

			
Diamond	Shiny Diamond	Emerald	Shiny Emerald
Location: Forgotten Lands Sells for: 600 Star Coins	Location: Forgotten Lands Sells for: 2400 Star Coins	Location: Forest of Valor, Circle of Trust Sells for: 325 Star Coins	Location: Forest of Valor, Circle of Trust Sells for: 600 Star Coins

			
Aquamarine	Shiny Aquamarine	Citrine	Shiny Citrine
Location: Double Beach, Forest of Valor Sells for: 250 Star Coins	Location: Double Beach, Forest of Valor Sells for: 600 Star Coins	Location: Sunlit Plateau, Circle of Trust Sells for: 300 Star Coins	Location: Sunlit Plateau, Circle of Trust Sells for: 600 Star Coins

		
Garnet	Shiny Garnet	Opal
Location: Pleasant Meadow, Plaza Sells for: 600 Star Coins	Location: Pleasant Meadow, Plaza Sells for: 640 Star Coins	Location: Rarely at any rock mine Sells for: 300 Star Coins

TIP Remember to take a mining companion with you when hunting for gems - you'll get additional drops!

			
Peridot	Shiny Peridot	Ruby	Shiny Ruby
Location: Double Beach, Pleasant Meadow Sells for: 200 Star Coins	Location: Double Beach, Pleasant Meadow Sells for: 800 Star Coins	Location: Sunlit Plateau, Plaza Sells for: 300 Star Coins	Location: Sunlit Plateau, Plaza Sells for: 600 Star Coins

			
Sapphire	Shiny Sapphire	Topaz	Shiny Topaz
Location: Sunlit Plateau, Plaza Sells for: 300 Star Coins	Location: Sunlit Plateau, Plaza Sells for: 600 Star Coins	Location: Plaza Sells for: 240 Star Coins	Location: Plaza Sells for: 360 Star Coins

		
Tourmaline	Shiny Tourmaline	Violet Crystal
Location: Forest Heights, Sunlit Plateau, Plaza Sells for: 400 Star Coins	Location: Forest Heights, Sunlit Plateau, Plaza Sells for: 600 Star Coins	Location: Sunlit Plateau, Plaza Sells for: 12 Star Coins

TIP Make sure to mine all rock spots, not just the ones where you can see gems sticking out - a lack of visible gems doesn't mean there are no gems under!

MERLIN

Merlin is an all-powerful wizard who's been around since the Middle Ages - no wonder he's so knowledgeable! He's a great source of information and advice, and he's also a little eccentric which makes him endlessly entertaining. He's the first person you'll meet when you begin your adventure and will be there for you every step of the way.

House
The Dreamlight Library is an incredible feat of medieval architecture boasting several astronomical features. Inside, you'll find more books than you can shake a stick at.

Disney Fascinating Facts

Over 1,000 real-world facts to entertain all ages!

- Cover: gloss lam.
- Features facts about plants, the oceans, animals, the environment, the night sky, insects, literature, art, theatre, music, fashion, general history, Greek myths and legends, Mayan and Aztec history, Arthurian legend, space, robotics, chemistry, biology, physics, inventions, things that go, toys and games, sport, adventure and exploration, the continents and much more.

Disney Fascinating Facts

NATURE: PLANTS

There are around 75,000 different species of trees on Earth, and amazingly over 100 per cent of them can only be found in a single country! If you want to see the most unique trees in one place, head to Colombia and behold the tree that has the thickest trunk in the world.

Summer means giant sunflowers cropping up all over the place. But did you know that the 'bees' of a sunflower is a parasitoid, or parasitic wasp, and is actually made up of many small flowers?

The Wolffia family of plants, also known as duckweed or watermeal, grow on the top of water and include the smallest flowering plants. Wolffia can be grown from seed, but can also clone itself very quickly and the fastest recorded clone took just under 30 hours to produce.

The baobab tree, sometimes known as the tree of life, is found largely in the continent of Africa and Australia. They can be massive in height and circumference, with some species reaching up to 22 metres tall and others 25 metres around!

NATURE: PLANTS

The tallest tree in the world is a coastal redwood in California, known as Hyperion. Coastal redwoods can grow super tall, but Hyperion is the tallest of them all, measuring in at just over 79 metres! Experts think it's somewhere between 600 and 800 years old!

Some fungi communicate via a system of underground threads called mycelium, which can connect them across several kilometres. If one of them is being eaten, it will send a signal through the mycelium to warn others and allow them to decompose a neighbour's chemical.

Everybody knows the smell of freshly cut grass, however, it's actually a distress call that the grass is giving off. When cut, the grass releases phenolamines that some scientists believe is a call to help signal the attack!

The jatropha tree, also known as the Brazilian goose tree, doesn't have fruit dangling from branches like apples and lemons. Instead, the fruit grows directly from the trunk of the tree, so it looks like it's growing in janky holes!

You can tell the age of most trees when they're chopped down by counting the number of rings the trunk has, but it can also show how well the tree has grown each year. The ring will be thicker if you had an abundance of resources, or thinner when there haven't been as many.

We all know that trees need sunlight and water to survive, but aren't there much water do they need? Some oak trees can drink up to 800 litres of water a day, but that's nothing compared to the giant sequoia, which will drink up to four times that!

SCIENCE

It doesn't matter whether scientists are looking inside your body or to the far reaches of the universe, incredible discoveries are being made every day in the world of science. Now it's your turn to explore amazing facts from the laws of robotics and dwarf planets to the atoms that make up the Earth and everything in the cosmos!

SCIENCE: SPACE

Our solar system has eight planets and one space in 2006. Since then, thousands of comets have been discovered and sent to Earth's orbit. Some of them are called Trojans and they just float through interstellar space on their own. Some estimate there could be up to 200 billion rogue planets in our galaxy alone!

The first satellite, Sputnik 1, was launched into space in 1957. Since then, thousands of comets have been discovered and sent to Earth's orbit. Some of them are called Trojans and they just float through interstellar space on their own. Some estimate there could be up to 200 billion rogue planets in our galaxy alone!

A company called Mars One planned to build a human colony on the planet Mars by the year 2022 and over 400,000 people signed up to be the first to leave Earth behind for good! But Mars One went out of business in early 2019, so these adventures will have to wait for their Martian voyage.

Humans have barely scratched the surface of outer space. To the future, probes and human accompanied expeditions will continue to explore. Technologies based on Earth, such as telescopes and space agencies that sense wavelengths invisible to the human eye, will also help scientists learn about our universe.

Enochian, one of Saturn's moons, is dotted with ice geysers! These geysers spray water vapor from deep beneath the moon's surface. The upper floors naturally when it leaves the ground. The frozen crystals that are Enochian's atmosphere, when they form an ice ring, the 'Ice Ring'! Fission would be proof!

Space is completely silent! Sound travels in vibrations in the air, but space is a bit of a vacuum - it has no air or atmosphere! Astronauts have to use radio waves to communicate so that they can talk in space.

SCIENCE: SPACE

Some of our solar system's planets are pretty hot indeed. Whereas Earth only has one moon, Saturn has 82 natural satellites that are four of its biggest moons. That's bigger than Mercury!

Venus rotates on its axis so slowly that one day there is equivalent to 283 days on Earth. However, it only takes Venus 225 Earth days to orbit the sun, meaning the Venusian day is longer than a Venusian year!

Earth isn't the only planet that has volcanoes! In fact, if you travel just one planet along to Mars, you'll find a volcano called Olympus Mons, which is over 600 kilometres wide and 21 kilometres tall. It's almost three times the height of Mount Everest and scientists think it could still be active!

Researchers at Yale University think they've discovered a new type of planet. It's called 55 Cancri e, a rocky planet that's possibly formed of diamond! Unfortunately, it's 40 light years away, so we can't visit it (yet) and it's probably a very hot planet.

The hottest planet in our solar system isn't the one that's closest to the sun! The temperature on Venus can reach 460 degrees Celsius (332 Fahrenheit), helped by its super-thick atmosphere, which retains heat. Mercury has no temperature-regulating atmosphere, so its heat fluctuates more.

In the observable universe - that's all of it - there are more stars than grains of sand on Earth. It's estimated that a million Earths could fit into the space that the sun occupies!

It's worth noting that every galaxy contains millions of stars and there are still parts of the universe we can't see yet!

NATURE

Whether you're looking at the creepy-crawly beneath your feet, or the starry sky above you, you're surrounded by the amazing natural world. Read on to discover incredible trivia about everything from mosquitoes and polar bears to talking mushrooms and bright stars millions of miles away!

NATURE: PLANTS

As well as being delicious, strawberries are one of the only fruits that grow their seeds on the outside - sometimes up to 200 of them! In fact, they're technically not seeds, but something called an achene, which is an individual fruit that holds a seed!

The biggest flower in the world is the *Rafflesia arnoldii*. It can grow to over 1 metre wide. It doesn't have its own root system, so latches onto other plants to grow. Don't sniff this flower though - its smell has been likened to rotting meat!

Pitcher plants have jug-shaped leaves and produce a nectar that entices insects and other small creatures inside. The leaves of the pitcher plant close once an animal falls in, and chemicals called enzymes digest the creature so the plant can use the nutrients!

No plant grows faster than bamboo. A Chinese bamboo variety called moso can grow almost a metre in a single day! It doesn't waste its energy growing any wider, so it can concentrate on shooting straight up.

Some animals only eat plants, but sometimes the plants bite back! The Venus fly trap has hinged leaves that look like a toothy mouth. If an insect touches the hairs inside the leaves, they snap shut so the insect can't escape. It can take the Venus fly trap up to five days to digest the trapped insect!

Disney Brain Games: Maths

100 Disney-themed maths puzzles to exercise young minds!

- The first *Disney Brain Games* book has sold over 58,000 copies (as of August 2023)
- 100 fun and challenging maths-based puzzles
- Features a wide range of beloved Disney and Pixar characters, from Anna and Elsa to Woody and Buzz Lightyear.
- Varied and challenging puzzles with different levels of difficulty to keep bright minds entertained
- Supports KS2 Maths curriculum
- Disney+ has 157.8 million paid subscribers globally, and 7.14 million paid subscribers in the UK.

Disney Brain Games: Maths

Puzzle 28
EIGHT QUEENS

Mr. Gao has a chess puzzle for you to solve! In chess, the queen can move any number of spaces in a straight line – horizontally, vertically or diagonally. **Place eight queens on the chess board so that no queens is in the same line as any other queen. How many different ways can you find?**

Puzzle 29
ARCHERY PRACTICE

Merida's practicing her archery skills. To prove what a great archer she is, Merida must hit one number in the outer ring, one number in the inner ring and one number in the centre that add up to each of the three numbers below.

Can you figure out which three numbers she must hit to make each of the target scores?

Puzzle 39
MICKEY'S MAGICAL MIX UP!

The Sorcerer's Apprentice has accidentally jumbled all of his master's Plus and Minus potions over!

Can you put the pluses and minuses back in the right places so that these sums work forwards, backwards, up and down?

Puzzle 40
...AND THE KITCHEN SINK

Every time Arthur tries to clean one of Merlin's dirty dishes, the number of dirty dishes doubles. He started with one dirty dish. Arthur has tried to clean 10 dirty dishes. **How many dirty dishes are there now?**

- 1
- 2
- 3
- 4
- 5
- 6
- 7
- 8
- 9
- 10

Puzzle 49
SOLVE THE RIDDLE OF THE CAVE!

To enter the Cave of Wonders, Aladdin must find the missing numbers in this puzzle.

Each square needs to be filled with a number between 1 and 9, but you can use numbers more than once. The functions surrounded by stars are carried out first.

So:

$$\begin{matrix} 2 & \star & 3 & + & 6 & = & 12 \\ 2 & \times & 3 & \star & 6 & = & 18 \end{matrix}$$

Puzzle 23
SHY COCONUTS

Some Kakamora have hidden themselves among Moana's coconut harvest. You can tell which coconuts are Kakamora in disguise, because the numbers they have stuck to them have made the questions they're hiding in incorrect.

Make the sums correct by removing 1 digit from each question.

$$32 + 70 = 73$$

$$42 + 35 = 37$$

$$41 - 60 = 35$$

$$15 - 13 = 12$$

Disney Brain Games

100 exciting Disney puzzles to exercise young minds!

- Over 37,000 copies sold (as of August 2022)
- 100 puzzles across themes of word, logic, maths/number, memory and more
- Join your favourite Disney characters such as Moana, Anna and Elsa, Dory, Miguel, Belle, Aladdin, Mike and Sulley and many more as you complete the challenges.
- Features characters from across Disney and Pixar, including heroes, villains and Princesses!
- With varied and challenging puzzles with different levels of difficulty, there's enough puzzles to keep bright minds entertained.

Disney Brain Games

Puzzle 1
THE MISSING NOTE

Hector and Miguel share a passion for music, so they spend a lot of time singing and playing music together. They are rehearsing a song, but have encountered a problem – the song is missing the last note.

Find the path that connects the two singers, and discover which note is missing!

Cross off the notes in this list as you go:
C D E F G A B

The missing note is: _____

Puzzle 2
HERCULES AND THE HYDRA

Hercules is battling the terrible monster Hydra in the cave where it dwells. At the start of the battle, Hydra has only one head, but each time Hercules cuts a head off, three grow in its place. He has already cut off twelve heads.

How many heads does Hydra have now?

Heads in total: _____

Use the space if you need to work it out on paper.

Puzzle 3
I'M LATE, I'M LATE!

It's always "late" for the White Rabbit, and he's always checking his giant watch! Right now, it's 5:00 pm. The White Rabbit's next appointment is in 100 hours' time, but he is already worried about being late!

1. How many days is it until his appointment? _____

2. What time will it be at? _____

Use the space if you need to work it out on paper.

Puzzle 4
MEMORY SEQUENCE

During a test, Anger got into a fight with Fear, and that messed up Riley's memories. Luckily, Joy has a solution!

Start from memory 0 and plot the right path. Remember: each memory is equal to the sum of the two previous ones!

Use the space if you need to work it out on paper.

Star Wars Brain Games

100 exciting *Star Wars* puzzles to exercise young minds!

- With varied and challenging puzzles with different levels of difficulty, there's enough content to keep kids engaged and entertained for hours.
- 100 puzzles across themes of word, logic, maths, number, memory, mazes and more.
- Disney + has 87.6 million paid subscribers globally, with an additional 50.1 million paid subscribers for Disney + Hotstar. In the UK, Disney + has 7.5 million subscribers, which is up 21% from 2021.
- Cover finishes: mat lamination.

Star Wars Brain Games

PUZZLE 10 BINARY BAFFLER

Luke Skywalker needs to fix a battered old astromech. The binary start-up sequence is incomplete – can you help him fill in the blanks to get the droid working again?

You must place three '0's and three '1's into each row and column, but there cannot be more than two '0's or two '1's in sequence in any row or column.

			1	1
0		0	1	0
1	1		1	0
1	1			

PUZZLE 11 JAWA JUNK

The Jawas have found a new droid while scavenging on the desert planet Tatooine, but the identification panels have been mixed up. Each set of four panels has been rearranged – but not rotated. Can you work out what two-character identification code was originally displayed on the panels?

PUZZLE 43 MIND CONNECTION

Qui-Gon will help you learn to see with the Force, by changing 'MIND' into 'SEES' in just four steps. At each step you should change just one letter to make a new word, without rearranging any of the letters. For example, you could start by changing MIND to MINE (though that will lead you down the wrong path.)

PUZZLE 44 TIE FIGHTER SHOOT OUT

Rey and Finn are being shot at by TIE fighters and must find their way to a vehicle to escape. Answer the sums and follow the correct answers to find out which vehicle they steal.

PUZZLE 75 FOLLOW THE PATH

Using the letters in order from the word EMPIRE, follow the correct path to find your way through the maze.

PUZZLE 76 TANGLED WIRES

The door controls have been destroyed! Connect the right wires so the Mandalorian, Din Djarin, and Grogu can escape! But be warned – the door is guarded by a noisy gatekeeper droid. Avoid it at all costs!

Look at the tangle of cables and figure out which button to push to open the door and which turns off the lights.

PUZZLE 9 SHADOW MATCH

The galaxy is full of heroes and villains, including the daring Resistance pilot Poe Dameron and scavenger-turned-fugitive Rey. Match the character's shadows to their names.

1. Rey
2. Stormtrooper
3. Poe Dameron
4. BB-8
5. Captain Phasma
6. Chewbacca
7. Kylo Ren
8. Finn

Marvel Brain Games

100 exciting Marvel puzzles to exercise young minds!

- 100 puzzles across themes of word, logic, maths/number, memory and more.
- Join your favourite Marvel characters such as Ant-Man, Shuri, Captain America and many more as you complete the challenges.
- Features characters from across Marvel comics including heroes, villains and agents!
- With varied and challenging puzzles with different levels of difficulty, there's enough puzzles to keep bright minds entertained.
- Marvel has 4 of the 10 biggest movies of all time (*Avengers*, *Avengers Endgame*, *Avengers Infinity War*, *Spider-Man No Way Home*).

Marvel Brain Games

**PUZZLE 1
SPEED TEST**

Using the clues below, can you work out – in 30 seconds or less – the identities of these four comic characters?

- Red – Twin brother – Telekinetic
- Artificial Intelligence – Robot – Hank Pym
- Radiation – Web – Peter Parker
- Spy – S.H.I.E.L.D. – Black

**PUZZLE 2
ANT-MAZE**

To escape from prison, Scott Lang needs to activate his suit and reduce himself to the size of an ant. He still needs to find the way out of the maze though... can you help him plot a path to freedom?

**PUZZLE 3
WHO AM I?**

One of Black Panther's enourage has gone missing. Can you work out who it is from the letter clues below? We've filled in a few letters to get you started.

Can you work out who it is from the letter clues below?

The right letter in the right place looks like this: **O** The right letter in the wrong place looks like this: **R**

And if the letter is not in the word it looks like this: **A**

G R A S P
P I V O T
C H A S M
P O U N D
S H A R P

**PUZZLE 4
IN THE SHADOWS**

Only one of these shadows is an exact match for Captain America. But which one is it?

**PUZZLE 5
LAB WORK**

Bruce Banner is hard at work on a formula in the lab. Can you help him calculate the final formula by filling in all the blanks? The number in each circle must be the sum of the two numbers below.

Example:

```

    33
   / \
  17 16
 /   \
8     9   7
/ \   / \
5 3 6 1
    
```

87

.....

19 22

.....

2 6 7

**PUZZLE 6
BUILD A HERO!**

Can you pair the word parts below to create the names of five super heroes?

Star Wars: Jedi Mind Training

A collection of more than 100 *Star Wars*-themed brain-training puzzles and exercises to keep your mind as sharp as a Jedi's.

- 100+ fascinating and devious logic problems and brain training exercises, with a Jedi theme
- Test yourself against three levels of complexity, from Padawan to Jedi Knight to Jedi Master
- A perfect gift for adult *Star Wars* fans who have enjoyed titles such as *Murdle*

Star Wars: Jedi Mind Training

PUZZLE 03 PADAWAN

UNEQUAL

Inequality, greater, and lesser are concepts that are all too often encountered in the universe. They are of interest for the Jedi, who do not deal in absolutes and who strive for knowledge over ignorance. Bigger is not always better; smaller is not always weaker.

The number square must be fully completed so that each number appears once only in each row and column. In addition, each greater than (>) or smaller than (<) symbol must be correct.

Starting from square 1, move any number of squares in the direction of the arrow. Then move any number of squares in the direction of the arrow to the square you end up in, and so forth. Each square in the grid must be visited once only, and you must end in square 16.

NOT FINAL

PUZZLE 03 PADAWAN

LOGICAL DEDUCTION

Han Solo's blaster pistol has been stolen in the Mos Eisley Cantina, and you have to work out who did it. There are three suspects.

- Greedo: You that know him and Han simply don't get on.
- Dr Cornelius Evazan: There's something very unpleasant about this guy.
- Luke Skywalker: You never know who your friends are, do you?

Each suspect was found holding another item. And there are three places the theft could have happened:

- A light Saber
- A Moo horn
- A glass of Blue Milk
- Bandstand
- Booth
- Bar

There are five clues:

- Greedo trusted the suspect who used a light Saber.
- Dr Cornelius Evazan was holding a Moo horn when you saw him.
- A glass of Blue Milk was not found in the booth.
- Luke was spotted hiding under the bar.
- The blaster was eventually found in the bandstand.

Use the clues to fill in the grid opposite and log what you know, then use logical deduction to work out what you don't!

NOT FINAL

PUZZLE 03 PADAWAN

BALANCE: DARK SIDE/LIGHT SIDE

For there to be peace, there should be balance. A Jedi will seek balance in everyday life, and will learn to concentrate and feel their way as different elements seek to dominate; order must be restored, balance must prevail.

In this puzzle, each row and column must contain the same number of dark side tiles and light side tiles, but care must be taken, for neither may have more than two next to each other, vertically or horizontally. No row may be identical in sequence to any other row; the same rule applies to columns, which must also all be unique.

10

PUZZLE 04 PADAWAN

PATTERN RECOGNITION

Allow your inner calm to enhance your focus and clarity of thought. First look at the pattern, looking for intricacies, repetitions, and any variations that may be apparent. Now think of the flow, noticing how one colour becomes another. Let your intuition guide you.

Which of the blocks a, b, c, d, e, f completes the sequence in line 3?

- Features a foreword by Lucasfilm Art Director Troy Alders

A New Hope (Star Wars Cinematic Classics)

CINEMATIC CLASSICS

C-3PO wandered away, complaining bitterly. He passed the giant skeleton of a knight dragon that lay bleached on the sand. Then he spotted something on the distance.

"A transport," he said excitedly, waving his metal arms in the air. "I've saved! Over here, they may 'Please help!"

Meanwhile, R2-D2 had reached the dark hills. The little astromech whirled softly as he trundled through a stormy rain. Luke still believed that he was being watched. Behind the rocks, hooded creatures known as Jawas whispered to one another. Their yellow eyes glowed as the droid passed by.

Then one of the Jawas sprang up in front of Artoo and fired an ion blaster. The blue energy bolt struck the droid, knocking him off his feet.

Concept art of C-3PO and R2-D2 on the planet of Tatooine after landing on the escape pod. **Ralph McQuarrie**

- 14 -

EPISODE IV: A NEW HOPE

The Jawa gestured eagerly. "Ubini!" he cried, and the others crowded round, lifting Artoo. They carried him through the rain to their gigantic sandcrawler, where they fitted the little droid with a restraining bolt to prevent him from escaping. Then a large air-pipe stalked down from the sandcrawler and sucked Artoo inside.

Artoo was dumped into a large chamber filled with strange droids. They came in all shapes and sizes, from boxy power droids also known as glat droids, to machines built for moisture farming, mining and security. There a pair of glowing eyes spotted Artoo.

"That's no moon," Obi-Wan told him. "It's a space station. I Han Solo tried to turn the Falcon around, but it was too late. They were caught in an invisible tractor beam, pulling them deadily closer to the Death Star.

"Destroyed," he told the others. "By the Empire."

Luke couldn't believe that such a thing was possible, but there was no time to discuss it. A ship had appeared on their scopes: a small Imperial TIE fighter. It blasted the Falcon, then it strafed away.

"It's heading for that small moon," Luke pointed.

"That's no moon," Obi-Wan told him. "It's a space station. I Han Solo tried to turn the Falcon around, but it was too late. They were caught in an invisible tractor beam, pulling them deadily closer to the Death Star.

"Send a scanning crew aboard," Vader ordered. I want every part of this

Concept art for the Death Star showing the docking bay where the Falcon has landed. **Ben McQuarrie**

- 18 -

CINEMATIC CLASSICS

Obi-Wan Kenobi slipped through the corridors of the Death Star, drawing closer to the Millennium Falcon. But before he could reach it, he came face to face with an old acquaintance. Darth Vader stood blocking his path, a red lightsaber humming in his hand.

"I've been waiting for you, Obi-Wan," the Dark Lord boomed. "We meet again at last. The circle is now complete. When I left you, I was but the learner. Now I am the master."

Obi-Wan moved swiftly, countering blow after blow. "You can't win, Darth," he said in former apprentice. "If you strike me down, I will become more powerful than you can possibly imagine."

"You should not have come back," Vader replied, lunging at Obi-Wan, but the old Jedi was too quick.

Spitting the duel from across the hangar, the stormtroopers guarding the Millennium Falcon peeled away, turning to the aid of their quarters.

Luke, Leia, Han and Chewie had made it back to the hangar, where Artoo and Threepio joined them. With the guards distracted, they ran for the Falcon. But as he neared the garage, Luke saw his mentor locked in combat with the monstrous Darth Vader.

Concept image for Obi-Wan Kenobi. **Ben McQuarrie**

- 48 -

CINEMATIC CLASSICS

In the Death Star's control room, an aide approached Grand Moff Tarkin, offering to ready his ship in case the Rebels were successful. "Evacuate?" Tarkin asked disbelievingly. "In our moment of triumph? I think you overestimate their chances." He was sure that this ragtag army posed no threat to his battle station.

Meanwhile, Red Leader had guided another group of fighters into the trench. Vader was right behind them, taking out first one, then two of Red Leader's wingmen. But the Dark Lord was too late. Red Leader was in

Concept art for the Death Star trench run. **Ralph McQuarrie**

- 58 -

EPISODE IV: A NEW HOPE

range. He fired, and his torpedoes streaked towards the target.

The shot was no good. The torpedoes missed, exploding on the surface of the Death Star. And as Red Leader turned to flee, Darth Vader's TIE fighter swooped in. Red Leader's X-wing slammed into the battle station and burst into flame.

Luke saw the ship explode and knew that time was running out. Flanked by Biggs and Wedge, he flew at full speed into the trench. But Darth Vader's fighter was right behind them and closing fast.

The Dark Lord fired, scoring a hit on Wedge's engine. "I'm hit!" Wedge cried, peeling off. Vader ignored him, keeping his focus on Luke and Biggs. They swooped from side to side, trying desperately to evade the Dark Lord's fire.

It was no good. Biggs's ship was hit, and Luke watched as his best friend's ship exploded into shards of flame. There was no time to grieve. He knew that he was the Rebels' last hope for victory.

Luke switched on his targeting computer and prepared to fire his torpedoes. As he struggled to lock on to the target, Ben Kenobi's ghostly voice spoke to him once more. "Use the Force, Luke," the old Jedi told him. "Let go. Luke, trust me."

Luke deactivated his computer. He was determined to trust his instincts.

BELOVED CHARACTERS

THE GOLDEN AGE

Literary classics provided strong source material for a number of Disney films. Alice in Wonderland (1951) is Disney's version of classic Lewis Carroll children's novel; Alice's Adventures in Wonderland and Through the Looking Glass, and What Alice Found There. The books had fascinated Walt Disney since childhood. In the 1920s, they had loosely inspired his part animated, part live-action Alice Comedies and since then he had bought the film rights to the novel. Disney concept artist and colour stylist Mary Blair created exuberant, fantastical production artwork that inspired the look of the film. Music and songs hold the film's sequences together and propel the story along - the film features more songs than any other Disney film at the time. One of the film's most extravagant scenes, the Mad Hatter's tea party, was initially filmed in live-action to provide an aid to animators. Vaudevillean actor Ed Wynn played the Mad Hatter and Wynn's extemporized voice track was so inspired it was used for the final film.

In 1913, Walt had seen a touring production of J.M. Barrie's stage play Peter Pan and, inspired by its combination of fantasy and swashbuckling adventure, acquired the film rights in 1939. As with Alice in Wonderland, Mary Blair created the signature production art for the film. Live-action footage was shot for the animators' reference, with the voice actors performing their roles. Meanwhile, the magic of Disney animation made the characters fly - Peter Pan even engages dastardly Captain Hook in mid-air sword fights. Tinker Bell, often represented merely as a spotlight in stage versions, became a fully realized character using actor Margaret Kerry and others, in live-action model. Released in 1953, after nearly two decades of work and thousands of drawings, Peter Pan was an immediate success and has remained a beloved Disney classic.

Literary works have remained a source of inspiration. The Sword in the Stone (1963), a whimsical adaptation of T.H. White's novel about the Arthurian legends, was the first Disney animated feature film to include songs by the Sherman Brothers, who would later work on Mary Poppins (1964), The Jungle Book (1967) and many others. The Rescuers (1977), a tale of an international rescue organisation run by mice, was based on a book series by English author Margery Sharp. Cruella De Vil nearly became the main villain in the film, but in the end the animation team created the fiery tempered, diamond-obsessed pawn shop owner Madame Medusa. Some classic tales are updated in inventive new ways: Treasure Planet (2002) is a version of Robert Louis Stevenson's 1883 novel Treasure Island set in outer space!
