How To Draw Pets

Heads, paws and claws

Pets have many different types of heads, paws and claws. Studying and sketching the detailed features of a pet will help you with your final drawings.

Quick pencil sketches can help you to understand the structure of paws and claws.

Look for areas where hair should be darker and also for changes of texture.

The more you study a subject and your final drawing is the more accurate your drawing will become.

Always consider the light source and add tone to the darker areas.

10

Using photos

Drawing from photographs of pets can help you develop both your drawing skills and your eye for detail.

Make a tracing of a photograph and line up all of straight lines.

Use this as a guide to draw your own drawing. You can use a pencil to draw the straight lines and then use a pen or marker to draw the curved lines. You can use a ruler to help you draw the straight lines.

12

Dog

Dogs are often kept as domestic pets but some, like sheepdogs, are used for work.

Draw a circle for the head. These two circles are the same size as the length of the front legs and the chest for the shape of the front legs.

Add a small circle for the eye.

Sketch a construction line to show the neck.

Draw the shape of the tail with curved lines.

Draw the dog's ears, adding to the back and front.

Sketch in the shape of the front legs.

Sketch in the back legs, using the same construction lines as the front legs.

Complete the shape of the head.

Add some of the fur lines to create the texture of the fur. Use an eraser to remove any lines that are not needed.

Remember to use cross-hatching to create darker areas.

18

Rabbit

Rabbits are popular pets that are usually kept outside in a hutch.

Draw a circle for the head and two ovals for the shoulders and rear.

Draw two long connecting curved lines.

Add two front legs using straight lines and use half circles for the front paws.

Sketch in the basic shape of the rear legs and paws.

Position the rabbit's ears on its head.

Sketch in the rabbit's muzzle using straight lines.

Add a little round tail.

Add the head details: draw in the ears, eyes, small nose and mouth.

Add tone to the rabbit's body to give the impression of fur.

Add shading to areas where the light would not reach.

TATTOOS

In the early nineteenth century over 90 per cent of all sailors sported a tattoo. They marked milestones in a sailor's voyage and served as reminders of the places they had been. But mainly, tattoos were believed to be good luck talismans.

Spot the only tattoo opposite that matches this one above.

BATTLESHIPS

YOU WILL EACH NEED:
2 grids (see page 81)
A black pen
A red pen

BATTLESHIP RULES (2 PLAYERS)

- Players take turns to call out a 'co-ordinate' (a letter and a number) to guess where their opponent's ships are placed. Your opponent checks their grid, and shouts 'hit' if you have guessed correctly and 'miss' if not.
- Keep a record of all your guessed co-ordinates on your spare grid. Use black for a 'miss' and red for a 'hit'.
- The first player to sink all his enemy's ships is the winner.

How you see

Light passes through a hole called the pupil, in the coloured part of your eye. It passes through the lens which focuses it on the retina at the back of the eye. This sends signals via nerves to your brain.

Image appears upside down on retina

Colour the pictures

Tricking the eye

Look at this picture for a minute or two. Then close your eyes. You should see an image of the skull even though your eyes are closed.

Look at the circles in the centre. Which looks bigger? Now measure them with a ruler.

Check your pulse

Every time your heart beats, it sends a surge of blood through your arteries. These little surges are your pulse.

Feel your pulse by pressing two fingers on your wrist below the base of your thumb.

Eating and exercise make your heart beat faster. Time your pulse after doing different activities for two minutes. Record the results below.

Activity	Resting	Eating	Walking
Beats per 10 seconds			
Activity	Running	Hopping	Swimming
Beats per 10 seconds			
Activity			
Beats per 10 seconds			

Multiply the number of beats by 6 to find the number of beats per minute.

Match the skeletons

The adult skeleton contains about 206 bones. The smallest bones are in your ears!

Find the skeletons that match exactly.

How tall are you?

Measure your height and draw yourself between the two figures.

An adult's height is eight times the size of the head.

A baby's height is four times the size of its head.

How many times does your head fit into your height?

Follow the tail

Biggest and smallest

The tallest man who ever lived, American Robert Wadlow, was 2.72 m.

Average human 1.65 m.

Chandra Bahadur Dangi of Nepal is the shortest man, 0.55 m.

On the level

If you pour water into a series of tubes that are connected together, the water finds the same level in all the tubes.

All tubes connected to jar A should have water reaching the same level as in jar A. All tubes connected to jar B should have the same water level as jar B. But some of these tubes have been drawn wrongly! Can you find which tubes contain water at the wrong level?

HINT: It will help if you colour all the tubes connected to jar A red, and all the tubes connected to jar B blue.

Tricks with light

Optical illusions are tricks that fool the eye. They make you think you see something that's not really there.

Hold the book up in front of you and tilt it to the left or right. What happens to the curved lines in this drawing?

Stare very hard at the picture on the left, then slowly move it towards or away from you. What happens?

Are the horizontal lines level or slanting?

Can you see a triangle here? There isn't one in the drawing!

Are the sides of the square straight or curved? Check with a ruler.

Did you know? Optical illusions are not just for fun - they help scientists to understand how the eyes and brain work together.

Put the fish in the bowl

1 Trace the fish and bowl onto card. Colour them in, then cut out the two circles.

2 Tape the two pictures to a pencil, so both pictures face out.

3 Spin the pencil between your hands. Can you see the fish in the bowl?

Radioactivity

Maria Curie was one of the great scientists of the 20th century.

She was born in Poland in 1867. Her father was a science teacher. He taught Maria at home. Later she went to university in Paris, France, to study physics. There she met and married a fellow scientist, Pierre Curie. The Curies spent their lives finding out about radioactivity. They discovered a new radioactive element called radium. Their work was vital for the use of X-rays in medicine.

How Many laboratory flasks (bottles) are hidden in this picture? To find out, colour in all the shapes that have dots in them.

48 49

Rising air

When air is heated it rises. This is what makes a hot-air balloon rise. Air spirals upwards in currents called thermals where the sun heats the air near the ground.

This experiment uses the warm air from a radiator.

String

warm air rising

colour the snakes, then cut them out to make a spiral. Gently pull the head and tail apart. Use scissors to make a hole in the nose, and attach a string. Hang the snakes over a radiator and watch them spin around!
