# A World of Dinosaurs

Explore a world of dinosaurs in this fact-packed compendium, illustrated by Vicky Woodgate.

- Sample contents: NORTH AMERICA - Tyrannosaurus; Brachiosaurus; SOUTH AMERICA - Herrerasaurus; Gigantosaurus; AFRICA - Spinosaurus; Anglosaurus; ASIA - Velociraptor; Protoceratops; EUROPE - Iguanodon; Plesiosaurus; OCEANIA & ANTARCTICA - Minmi; Kronosaurus
- Features more than 60 species from across the world
- Informative and surprising text from palaeontologist and *Dinosaurium* consultant Jon Tennant
- Vibrantly illustrated by *Urban Jungle* and *A World of Birds* creator Vicky Woodgate

# A World of Dinosaurs

## The Age of Dinosaurs

The first dinosaurs appeared around 230 million years ago. They lived over three major periods in the history of Earth: the Triassic, Jurassic and Cretaceous periods. Together, these form the Mesozoic era, often referred to as the Age of Dinosaurs.

**The Triassic**  
At the beginning of the Triassic, there was the super supercontinent 'Gondwana'. Global temperatures were high and dinosaurs were small. Around three quarters of all plants and animals went extinct.

**The Jurassic**  
The continents continued to move away from each other. Temperature dropped and plants life became more lush and abundant. Dinosaurs grew bigger and bigger.

**The Cretaceous**  
The continents began to look more like their current shape. By now, dinosaurs lived right across the globe - even at the north and south pole. They grew bigger and bigger.

**What is a dinosaur?**  
Dinosaurs were not dinosaurs before them, and in their earliest days, a number of predatory mammals like all crocodile like groups existed, as well as some crocodile like reptiles.

**Extinction**  
By the end of the Mesozoic got around 66 million years ago, a barrier struck the Earth. Several large kinds of dinosaurs disappeared with large scale volcanic eruptions. This drastically changed temperature around the world. Around three quarters of all plants and animals went extinct.

**Extinct or evolved?**  
While many of the dinosaurs went extinct, some survived the event. They were a general line of dinosaurs - the birds. Able to adapt to the changing environments, they can only escape out of the extinction event, but most do so. However, there have been several times the large number of species we can see around today.

**Dinosaur timeline**

230 million years ago: Trilobites, Fish, Insects, Mammals, Reptiles, Amphibians, Birds, Dinosaurs

200 million years ago: Trilobites, Fish, Insects, Mammals, Reptiles, Amphibians, Birds, Dinosaurs

150 million years ago: Trilobites, Fish, Insects, Mammals, Reptiles, Amphibians, Birds, Dinosaurs

66 million years ago: Trilobites, Fish, Insects, Mammals, Reptiles, Amphibians, Birds, Dinosaurs

## Dinosaurs Today

Most dinosaurs that we have found fossils from are from the Mesozoic era. However, there are several dinosaurs that we have found fossils of that lived in the present day. These are called 'living dinosaurs'.

**What is a fossil?**  
The process of fossilisation takes many thousands of years to complete. It is a gradual process where the parts of an organism are slowly replaced with harder materials, which are better able to withstand decay. Dinosaurs that are fossilised are called palaeontologists.

**Fossil hunters**  
Fossil hunters are those who search for fossils. They are often found in the ground, but some are found in the sea. Fossil hunters are often found in the ground, but some are found in the sea.

**Trace fossils**  
The only fossils are the preserved remains of a dead body. Sometimes, we can find and find evidence of what a dinosaur was doing while it was alive. These are called trace fossils, and are useful evidence of dinosaur behaviour. These fossils include egg, footprints and other fossilised faeces (poop).

**What is a fossil?**  
The process of fossilisation takes many thousands of years to complete. It is a gradual process where the parts of an organism are slowly replaced with harder materials, which are better able to withstand decay. Dinosaurs that are fossilised are called palaeontologists.

**Trace fossils**  
The only fossils are the preserved remains of a dead body. Sometimes, we can find and find evidence of what a dinosaur was doing while it was alive. These are called trace fossils, and are useful evidence of dinosaur behaviour. These fossils include egg, footprints and other fossilised faeces (poop).

## North America

Towards the end of the Cretaceous, the supercontinent Pangaea started to break up, and the Atlantic Ocean separated North America from Africa and Europe. At this time, North America had a humid, temperate climate, with many different habitats. Later on, during the Cretaceous period, a shallow inland sea covered much of the middle of North America. The first fossil that shows a type of dinosaur evolved on either side of the water.

**Key**

- Eubrontosaurus albertensis
- Spinosaurus
- Ankylosaurus
- Allosaurus fragilis
- Dakotadon
- Tyrannosaurus rex
- Quetzalcoatlus northropi

## Tyrannosaurus rex

Group: Theropod • Period: Cretaceous  
Pronunciation: Tie-ran-oh-saw-rus rex

Tyrannosaurus rex was perhaps the largest carnivore ever to walk the Earth. It had one of the most powerful bites of any animal, with teeth like steak knives for tearing through flesh and crushing bone. Its name, meaning 'tyrant lizard king', reflects its spot at the top of the food chain in the Cretaceous period.

**A large olfactory bulb (the part of the brain that processes smell) suggests T.rex may have been a scavenger as well as a hunter.**

**Huge head**

**Eyes as big as grapefruits**

**Stiff tail to counterbalance heavy head**

**Teeth as long and thick as bananas**

**T.rex could bite with a force of about 3,500kg - 6 times stronger than a crocodile's bite.**

**Tiny strong arms with two claws**

**Powerful hind legs for sprinting**

**Up to 3.6m**

**Powerful legs for running**

**Salwater crocodile**

## Allosaurus fragilis

Group: Theropod • Period: Jurassic  
Pronunciation: Al-oh-saw-rus fra-jil-is

Often termed the 'wolf of the Jurassic', Allosaurus was among the top predators of its time. Packs of these fearsome hunters would chase after their prey, slowly draining their target of energy before diving in for the kill. Discovered in 1877, Allosaurus was one of the first dinosaur fossils discovered in North America.

**Allosaurus could probably open its jaws very wide, to around 70-90 degrees.**

**Slash & grab**  
Allosaurus probably used its sharp teeth in a 'hooking and slashing' motion, to inflict dozens of smaller wounds on larger prey.

**Crest may have made it look more intimidating**

**More than 70 sharp teeth**

**Fairly long arms, possibly for grabbing prey**

**Stegosaurus**

**Allosaurus specialised in attacking mid-sized prey such as Stegosaurus.**

**Up to 9.6m**
