Baby Steps: It's Bedtime, Bear

Lift the flaps, find the toys!

- Illustrated by London-born illustrator, Richard Merritt.
- Big, easy-to-lift card flaps help children develop fine motor skills: with 5 big flaps to lift.
- A gentle story to build early language skills - perfect for children just starting to say their first words.
- Encourages little ones with their bedtime routine.
- Featuring S&BÂ®'s innovative anti-bacterial finish on all pages: 100% natural, plant based and sustainable, offering 99.99% germ control including covid 19, MRSA, E-coli, mold and yeast. This green formulation is safe for babies and contains no microplastics.

Baby Steps: Move Like Me

Slide the tab, copy the action!

- Illustrated by London-born illustrator, Richard Merritt.
- A simple rhyming text is fun to read aloud and easy for little ones to join in with.
- With 9 sliders to pull and push to make the animals on every page move about.
- This book will help little ones learn to name body parts and follow simple instructions.
- Moving the sliders helps children develop fine motor skills; copying the actions builds gross motor skills.
- Featuring S&BÂ®'s innovative anti-bacterial finish on all pages: 100% natural, plant based and sustainable, offering 99.99% germ control including covid 19, MRSA, E-coli, mold and yeast. This green formulation is safe for babies and contains no microplastics.

Match the Shape

A first words book that's also a shape-sorter!

- An innovative board book design that lets toddlers place three chunky shapes into matching slots. Three shapes attach to the book via ribbon: circle, square, triangle.
- A die-cut in the cover showcases the novelty and keeps the pieces securely in place when the book is shelved.
- Matching the shapes aids children in their fine motor skills, hand-eye coordination and problem-solving skills.
- Introduces familiar first words on every spread.
- Illustrated in vivid colour and effortless style by Polish artist Susie Hammer.
- Also in the series: Match the Colour (2025).

Mrs Owl's Forest School: The Very Big Den

Discover forest school in this gentle story packed with facts

- A perfect mix of picture book and non-fiction - ideal for curious explorers or Forest School pupils
- Forest schools are growing in popularity in the UK and internationally, and sessions are now widely incorporated into the school curriculum at primary level
- Includes kit lists, how-tos and campfire recipes you can try at home with an adult
- With a page of tips at the end for bringing forest school activities into your own home, garden or park
- Written in consultation with outstanding certified forest childcare provider Lizzie Noble

Mrs Owl's Forest School: The Very Big Den

MRS OWL'S GUIDE TO TREES

Trees come in lots of different shapes. Here are some to look out for!

OAK
Old trees have a distinctive 'shaggy edge'.

HORSE CHESTNUT
These leaves look a bit like hands with five fingers.

BEECH
These are small, shiny leaves with serrated edges.

WHITE ASH
These have a light pattern of veins and green in spring.

Bessie's Bees

An uplifting story about starting nursery with a courageous neurodiverse character at its centre.

- Bringing debut, neurodiverse author George Kirk to the Templar picture book list, allowing us to grow our range of underrepresented voices and experiences.
- While there has been an increase in positive representations and neurodiverse voices in middle-grade fiction, this is yet to be seen in the trade picture book market. Templar can be one of the first to champion neurodiverse voices and stories in this space.

A hilarious rhyming romp that perfectly encapsulates how being HANGRY really makes you feel!

- Bringing debut author Kathryn Wanless as well as established, commercial talent Fred Blunt to the Templar list with his wit and humour.
- Exploring a theme that isn't currently seen in the picture book market - there are plenty of books about being hungry OR angry, but not both!
- This story uses humour as a conversation starter for children to talk about the very real, intense emotions that come with hunger.
- The book acts as a reminder that we all get hangry, even grown-ups, but it's how we deal with those feelings that matters.
- Cover treatment: matt lam, SPUV and pantone.

Oh No, Flo!

A fantastically funny farmyard fiasco to read aloud!

- Taking recognisable and familiar farm animal characters to create a funny and fresh picture book for the very young.
- Featuring bold and bright illustrations from Mike Byrne, well-known for *This Book is Full of Unicorns*.
- Catherine Cawthorne is fresh to the picture book world but is already making her mark with: *We Went to Find a Woolly Mammoth* (Hachette, 2023) and *The Big Bad Wolf Investigates: Fairy Tales* (Bloomsbury, 2024).
- The light-hearted text and repeated 'OH NO, FLO!' refrain to join in with, makes it the perfect book to share with a group or individual child.
- Cover treatments: matt lam and SPUV.

When a little boy refuses to tidy his room, his mess has dire consequences ...

- A topical story about looking after our world
- A subtle way of introducing complex and difficult subjects
- Pollution and climate changes are themes which are globally relevant
- Demand for picture books with strong messages
- A serious message conveyed in a fun and silly way.

The Bear and the Seed

An inspirational folktale about conservation and protection of the environment by Greenaway-shortlisted Poonam Mistry.

- Created by Greenaway-shortlisted and Carnegie-longlisted illustrator Poonam Mistry, nominated in 2024 for her other Templar book, *The Midnight Panther*
- Themes of conservation and protecting the environment, and a strong message that small actions that you can take will make a big difference.

My Name is a Gift

A heartfelt and touching celebration of the names we're given.

- Zeshan Akhter's debut picture book is filled with love and carries an important message - the perfect gift for any child.
- This lyrical ode to our names is brought to life by Åsa Gilland's expressive and detailed illustrations.
- Zeshan's second picture book with Templar, *Noah's New Home*, is due to publish in 2025.
- Includes a spread where the reader is asked about their name and has a chance to fill it in, making it the perfect activity for classroom and library settings.
- This story has roots in Muslim family traditions where dads gift their child a name, while also offering a universal message to all readers.
- Cover treatments: matt lam and foil.

The Circular Square

An uplifting rhyming story about becoming a well-rounded person.

- A quirky, philosophical rhyming picture book from the Waterstones Children's Book Prize shortlisted author, Simon Philip, offering him a new direction after the success of his *I Really Want to...* series.
- Bringing bold, graphic illustrator Neil Clark to the Templar list - a growing talent who is best known for his *CRASH, BANG, WALLOP* series with Ladybird.
- Includes back matter that encourages children to list the positives in their lives as well as lists of positives from the author and illustrator themselves.
- A meta picture book where artwork and characters engage with the layout, composition and size of the book - Square becomes the book in its square format!

Yetis Don't Exist!

A FUR-tastically funny rhyming adventure!

- Bringing rising talent, Kate Thompson, to the Templar list. She has two picture books with Welbeck and two new picture books coming with PRH in September 2024, and 2025.
- Bringing established quirky, commercial illustrator Loretta Schauer to the list with her bright palette and fantastic furry creatures. Loretta has previously worked with publishers like Ladybird, Farshore and Bloomsbury.
- Like *The Best Bear Tracker*, this book has a hilarious visual narrative alongside the text with the yetis and human explorer just missing each other more than once!
- The book's wintry, snowy setting offers the ideal seasonal gift without the story being explicitly Christmassy!
- Cover treatments: matt lam and foil.

THE ESCAPE

A story of 103 missing monkeys

XIMO ABADÍA

A monkey counting adventure

- A stylishly clever counting adventure from surrealist author-illustrator Ximo Abadía
- Encourages counting from 1 to 100, which children learn around age 5
- The number of monkeys to spot on each page increases through the book
- High-contrast black, white and red illustrations are both stylish and engaging for young readers
- Ximo's previous titles (including picture books *Toto*, 2018, and *I Can't Sleep*, 2020, and the STEM series including *The Speed of Starlight*, 2018) have sold more than 80,000 copies worldwide.
- Cover: matt lam + spot UV

The Fixer of Broken Things

What happens when the famous fixer of broken things finds a problem that she can't solve?

- From the author and illustrator of *Number 7 Evergreen Street*, winner of the Royal Institute Of British Architects' Student Choice & Teacher's Choice for 5-7 year olds
- Julia Patton is an up-and-coming picture book talent in both the UK and the US. Bartleby from *The Very Very Very Long Dog* (Sourcebooks) is on the Barnes and Noble character wall of fame in the US.
- A wonderful story about sadness and how talking to a support network can help. The 'broken thing' Bea finds is a clockwork heart and speaking about her problems is what makes it work again.

Winter Tales

A collection of winter tales from cultures around the world, beautifully brought together with striking gilt artwork.

- A timeless, treasured classic that speaks to all ages - following on from the success of *Star Stories*
- Includes stories from cultures on every continent giving it a universal appeal
- Written by Dawn Casey - author of Templar's *My Nana's Garden*.
- Over 76,000 copies sold worldwide (as of October 2022).

and a girl named Eliza. The king loved his family dearly. So, when the king's wife died, he was sunk in grief. But his advisers told him: "The country needs a queen! Besides, the children need a mother. So, though his heart had not yet healed, the king married again.

His new queen felt at once the lack of love. Hurt hardened her heart. One day, when the boys woke her with their noise, she snarped, "Get out!" she shouted. "Just go! Fly away!"

Words have power. As she pointed, the boys' skin sprouted feathers. Their arms became wings. Their necks stretched. And they flew: six white swans.

• THE NETTLE QUEEN •

The Nettle Queen
A folktale from Denmark

Nettles grow in great families and give us many gifts: food, medicine, cloth and dye. Nettle leaves are so rich and tender that many countries have to eat them – the plant uses its sting to make sure that not too many of its leaves get munchled! Nettle tea is zesty green. Nettle soup helps our bodies and bones grow strong and healthy. People have been using nettle stems to make cloth since Bronze age times.

Once there was a king who had six sons and one daughter, Eliza. The king loved his family dearly. So, when the king's wife died, he was sunk in grief. But his advisers told him: "The country needs a queen! Besides, the children need a mother. So, though his heart had not yet healed, the king married again.

His new queen felt at once the lack of love. Hurt hardened her heart. One day, when the boys woke her with their noise, she snarped, "Get out!" she shouted. "Just go! Fly away!"

Words have power. As she pointed, the boys' skin sprouted feathers. Their arms became wings. Their necks stretched. And they flew: six white swans.

Now, the queen made a strong dark dye – in a great pot, walnut shells hobbled and brewed. She poured the dye into Eliza's bath. It stained her hair and changed her face – she looked so different, even her own father did not know her.

"Who let a stranger in here?" he cried. "Throw her out!"

Eliza fled, into the forest. She wandered the woods, wishing her brothers were with her. But the trees and the plants, the birds and the animals were all with her. She talked to them, as if they were her brothers.

"Hello, Butterfly!"

"Hello, Nettle, may I pick a leaf? Ow?"

The sting made the tips of her fingers tingle. Just then, along came a woman, gathering nettles for soup. She picked a dock leaf for Eliza, to soothe her skin. She showed her the tiny butterfly eggs, she sheltered beneath a nettle leaf. She taught her how to pick the very top tips of the plant, that are best to eat. Eliza thanked the woman, and she asked her, "Please... Have you seen six princes?"

The woman shook her head. "No... no princes... But I did see six swans, down on the river."

Eliza followed the river all the way to the sea. But she didn't find her brothers. She did find a white feather, on the shore. She sat on the sand with the feather in her hand. And as the sun began to set, there came a sound – over the ponding of the waves – the singing of wings.

From over the horizon came six wild swans. As they landed, their white feathers fell away. There stood six boys – Eliza's brothers! Then there was hugging and kissing and laughing and crying, and more hugging.

"Every day, when the sun rises, we turn into swans," said her youngest brother. "We only become boys again when the sun sets. We live far off over the ocean, but every day, we fly back, to look for you."

"Now you've found me," said Eliza. "Take me with you!" So Eliza and her brothers gathered supple willow and tough rush, and together they knatted a net.

Eliza sat in the net and her own brothers lifted her clean into the

Enchanted Tales

The Magic Fish

A tale from China

The Brothers Grimm version of "Cinderella" is the one many of us are familiar with, but there are hundreds – maybe even thousands – of different versions of this tale from around the globe. This version from China was the first to be written down, over 1,000 years ago.

Once upon a time, in a little shed outside a little house in the cave mountains of Southern China, there lived an orphan called Ye-Tsien. She was bright-eyed, clever, kind and good at making things. Ye-Tsien's stepmother loved her own daughter best, so Ye-Tsien had to do all the heaviest, most dangerous work, like collecting firewood from the deep forest or water from the high mountain pools. One day, Ye-Tsien was collecting water when up from the bottom of a deep mountain pool there was a shimmering and a glittering. It travelled up and up until something broke the surface – a tiny, shining golden fish! The fish looked up at Ye-Tsien, Ye-Tsien looked back – and from that moment, the fish

The Magic Fish

and Ye-Tsien became friends. She took it home, placed it in a basin and fed it every day with scraps from her own plate. The fish grew and grew until, one day, it had grown so big she had to take it back to the pool. Still, Ye-Tsien visited the golden fish every day, and each time the fish would poke its shining golden head out of the water and greet her.

A few weeks later, the Stepmother was hungry and had an idea. Secretly, she fished Ye-Tsien to the pool. She saw how the huge, sparkling, delicious-looking fish always came out for Ye-Tsien but stayed deep under the water when anyone else came by. *How can I outwit this clever fish?* she thought.

The next day, back at home, the Stepmother gave Ye-Tsien new clothes to put on and sent her on a long errand down the mountain. Then she disguised herself in Ye-Tsien's old clothes, went to the pool and called the fish. When it bubbled up from the bottom of the pool, the Stepmother was ready with a knife. She took the golden fish home, chopped it up, cooked it and served it up to eat with her favourite daughter.

'Delicious!' they both said, wiping their mouths. They ate every morsel and threw its bones away on the rubbish heap.

The following day, Ye-Tsien hurried to the mountain pool and called – but no fish came. Big tears fell from her eyes and splashed into the empty pool. But as she cried, the air thickened, shimmering and glittering, and a figure appeared. It spoke in a voice that reminded her of safety:

*Today you cry, today you weep,
But look upon the rubbish heap.
Your fish friend's magic bones are there.
They'll grant you wishes, never fear.*

Mythical Tales

DIONYSUS AND THE PIRATES

Long ago, a fast ship sped East, hot sunlight cauting its shadow on the sparkling sea. The wind filled its sails and rows of wooden oars cut through the water, worked by strong sailors. On the ship's deck, twenty pirates smiled. The ship's hold was full of gold, jewels, fine delicacies, and something even better: a rich passenger who was going to make their fortunes!

That morning, a young man with diamond-bright eyes, rich purple robes and long dark hair, had wined and colked from a cliff-top:

"Sailors! Take me to the island of Naxos. I'll pay you well!"

The pirates agreed, and the young man had boarded the ship. But the pirates didn't just take goods, they were kidnappers too. The ship sailed straight past Naxos, and the captain cried, "You're our captive now! Your family will pay a ransom, or we'll sell you as a slave!"

The young man did not answer. He did not look worried either. He just stood there, eyes glittering, mouth curled up in a secret smile.

PERJUN'S STOLEN CATTLE
A tale from Croatia

Perjun was a young man with a golden nose and a silver eye. He was known for his cunning and his love of a good drink. One day, he was walking through a forest when he saw a herd of cattle grazing in a field. The cattle were of various colors, some black, some white, and some spotted. Perjun was looking at them when he saw a small figure running towards him. It was a little girl, and she was carrying a bundle on her back. Perjun stopped her and asked her what she was doing. She told him that she was taking the cattle to a nearby field. Perjun was suspicious and asked her to show him the field. She led him to a field that was surrounded by a high wall. Perjun climbed the wall and saw that the cattle were indeed in the field. He was angry and told the girl that she had stolen his cattle. The girl told him that she had no choice and that she was hungry. Perjun was angry and told her that he would not give her anything. The girl was crying and Perjun was laughing at her. He told her that she was a thief and that he would take her to the judge. The girl was so scared that she ran away. Perjun was angry and told his friends that he would go and get the cattle back. He and his friends went to the field and saw that the cattle were still there. They were surprised and asked the girl where she had hidden them. She told them that she had hidden them in a cave. Perjun and his friends went to the cave and found the cattle. They were happy and took the cattle home. Perjun was angry and told his friends that he would go and get the girl. He and his friends went to the forest and found the girl. They were angry and told her that she had stolen their cattle. The girl was crying and Perjun was laughing at her. He told her that she was a thief and that he would take her to the judge. The girl was so scared that she ran away. Perjun was angry and told his friends that he would go and get the girl. He and his friends went to the forest and found the girl. They were angry and told her that she had stolen their cattle. The girl was crying and Perjun was laughing at her. He told her that she was a thief and that he would take her to the judge. The girl was so scared that she ran away.

DIONYSUS AND THE PIRATES

A tale from Ancient Greece

Greek myth is bursting with colourful gods and goddesses and their dramatic dealings with each other – conquest, trickery, family feuds and love more. But some of the most strange and fascinating stories are about what happens between gods and people. Dionysus – son of the mighty god Zeus but also half-human himself – is known as the god of wine, pleasure and inspiration. This story is about one of his extremely creative ways of punishing humans who annoy him...

Animal Homes: Ocean

Dive in and explore the ocean in this introduction to habitats for the very young.

- Using Natasha Durley's striking and recognisable animals from *Creature Features* and newly illustrated plants and environments, her colourful and engaging artwork will be enjoyed by a whole new age of reader.
- The first spread starts on the lowest layer of the ocean (the ocean trench) and each subsequent shaped spread introduces the next layer of the ocean (the abyss, the midnight zone, the twilight zone and the sunlight zone). Add a new layer with each page turn until the final spread reveals the full habitat. This tactile, die-cut board book format is a new way to explore and introduce animal habitats, making this series an essential addition to parents' and educators' STEM library.

The Little Gardener's Handbook

A vibrant introduction to gardening.

- A vibrant first introduction to gardening for ages 6+
- Includes DIY activities to try at home.
- Text by expert ecologist and educator, Michael Holland.
- Colourful, charming artwork by illustrator Maria Dek.
- Expanding the younger side of the Big Picture Press list.
- Gardening is a subject only growing in popularity.
- Arlin quarter binding and matt lam cover finishes.

The Little Gardener's Handbook

ALL ABOUT SOIL

Soil is the brown earth that plants grow in and it plays a very important role in supporting life on our planet. The best way to keep your plants happy is to take care of their soil!

Check a seed has sprouted, the soil helps to anchor the plant's roots in the ground. From here, the roots can absorb water, nutrients and minerals from the soil that help the plant to grow.

Soil is teeming with life. Did you know that there are more living things in a handful of soil than there are humans on earth? Look out for interesting organisms such as worms, fungi, insects and bacteria.

These organisms have special functions. Worms, for example, are little underground diggers. They move dirt through the soil's surface. This is called turning over. As they dig, they pump out what they have eaten, which is a valuable kind of food for the soil.

GET TO KNOW YOUR SOIL

Soil is not just dirt. It's a mix of different things, like sand, silt, clay, moisture and air. As a gardener, it's important to get to know your soil. If a plant is from a warm part of the world and you're growing it in a cool soil, it won't be happy! Similarly, a plant from a damp area won't like to grow in a sandy soil.

- Bring a small jar (one litre/30 fl. oz.) of soil to a soil sample from your garden. Get it from a variety of places, between any big plants, then using your trowel, scoop the soil out of it in a plastic bottle.
- Seal it, and fill it large air with the soil. Put the lid on tightly and then give it a good shake. Let the water sit for at least 24 hours to settle.
- You should now be able to see the different layers of your soil. The amount of soil in different layers and the texture when you pour it, tells you a lot about it. Use the chart to help you to write up any interesting facts in the water.

GARDEN FOES

Sometimes your garden might be visited by some not so welcome wildlife visitors – something that creep through your plants and nibbling away at the leaves. Rather than using harmful chemical pesticides, there are some natural ways you can discourage any unwanted visitors to your garden.

ENCOURAGE BENEFICIAL ANIMALS

You can encourage beneficial creatures naturally by encouraging beneficial visitors such as ladybirds, bees, hoverflies, birds and frogs in your garden. The planting flowers that attract these insects, making a bug hotel or adding a bird bath.

PEST REPELLENTS

To repel insects, you can make your own natural repellents using a mixture of water, garlic, onion and chili.

PROTECT PLANTS

Use netting to protect plants from birds and squirrels. For a large tree, use a bird netting.

KEEP AN EYE OUT FOR PESTS

Slugs and snails can eat a whole batch of seedlings overnight. You can try adding a little slug and snail bait to your garden. Be careful not to eat any of the plants. Remember to check your plants every day for signs of pests – gently washing them and watering them in another part of your garden.

BEETLES AND BIRDS

Beetles and birds can eat your plants. You can try using a net or a cage to protect your plants.

BEETLES AND BIRDS

Beetles and birds can eat your plants. You can try using a net or a cage to protect your plants.

GROW CUPS OF NASTURTIUMS

Did you know that you can eat the petals from certain flowers? Nasturtiums are bright and colourful, and they have a little peppery taste. You can add them to a salad for a burst of extra flavour.

YOU WILL NEED:

- Old cups or tins
- Water
- Nasturtium seeds
- Wool

- In the bottom of each cup, add a layer of gravel. This is to allow the water to drain away from the roots because the cups do not have any drainage holes.
- Fill each cup with compost.
- Place a couple of holes in the compost and drop in the seeds.
- Cover with a little extra compost and add water to the cups and to the water tank above each cup.
- After a week or two, the seeds will start to shoot. When they are about 5cm tall, they can be eaten. They are best eaten raw.
- As the leaves grow, you can harvest them whenever you like. If you do on the plants, cut and place them off with a scissors. They will grow again.

WELCOME TO THE WONDERFUL WORLD OF GARDENING!

Whether you have a big garden or a small windowsill, you can make the world a greener place. Gardening is one of the best hobbies in the world and it's good for you, your neighbourhood and our planet! People have been gardening in one way or another for thousands of years, so you will be continuing a very long and important tradition.

In this book, you'll learn about how plants work, how to grow your own vegetables, how to encourage wildlife to your garden and why protecting plants is important for our lovely planet. Along the way, there will be plenty of activities and experiments for you to try for yourself – mostly using everyday materials you can find at home.

What are you waiting for? Let's begin!

The Incredible Voyage

Embark on an incredible adventure in a magical land this beautifully whimsical puzzle book.

- A beautifully whimsical puzzle book, mixing the fun and interactivity of puzzles with an epic adventure story. Perfect for unlocking the joy of reading.
- Written and illustrated by Aleksandra Artymowska, illustrator of bestselling *Around the World in 80 Puzzles* and *20,000 Leagues Under the Sea: A Puzzle Adventure*. Ola's puzzle books have sold over 100,000 copies worldwide.
- Featuring a strong female protagonist who shows that bravery and a sense of adventure isn't only for boys.

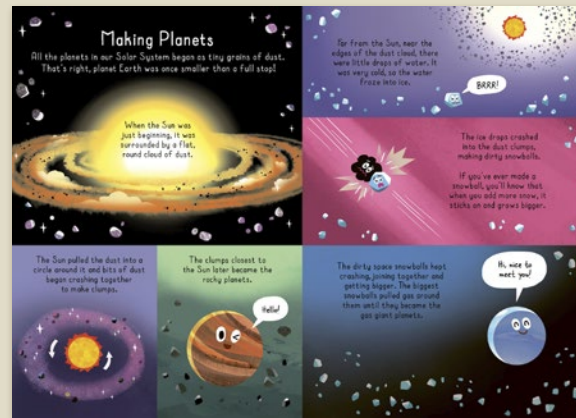

Tell Me About: Space

Big science for little readers.

- The third title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at space for young children, featuring topics such as: planets and moons, the solar system, stars and galaxy, constellations, what's in the night sky, gravity, the big bang, going into space and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Big science for little readers.

- The fourth title in a brand-new series of non-fiction books for readers 4+.
- A fun, accessible look at earth science for young children, covering topics such as day and night, seasons and weather, biomes, physical landscapes, the water cycle, volcanoes and earthquakes, fossil fuels, carbon emissions and much more!
- Written in friendly and engaging language by science educator and cBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung. The distinct lack of diagrams and focus on child-friendly illustrations makes this perfect for little readers!
- Cover finishes: matt lam + spot UV.

Tell Me About: Planet Earth

Earth is Home

You live on a brilliant ball of spinning rock called Earth. It's a planet, travelling through space on a gigantic loop around a star called the Sun.

There's another ball of rock about a quarter of the size of Earth and you can see it in the night sky. It's called the Moon.

It takes a month for the Moon to travel around Earth on an oval path.

It takes a whole year to travel all the way around the Sun. So if you are five years old, you have circled the Sun five times already!

Earth travels around the Sun on an oval path but it also spins on the spot. The spin is why it gets dark at night.

Your home turns away from the Sun at night and by morning it has turned back towards the Sun once again. It takes 24 hours for a complete spin to happen, and we call that a whole day.

Caves

Caves are big holes carved into cliffs by waves hitting the rock. But they can also form underground as rain trickles through cracks in the rock.

That's right, tiny little rain droplets can make massive caves because they dissolve the rock away a little bit at a time.

Underground rivers flow through caves. They wear the floor of the cave down to make them even bigger.

Inside the cave, some droplets of rainwater evaporate. As the liquid water drops turn into gas, they leave behind the tiny bits of rock they were carrying. The bits of rock stick to the roof.

In a thousand years, all the drops of water will have left enough rock behind to make a shape about as long as your finger. This is called a stalactite.

The same thing happens as the water drops onto the floor of the cave too. The cave floor grows upwards into a wider opening, which is called a stalagmite.

Digging and Drilling

When humans dig useful rocks and metals out of the ground, it is called mining. People also drill long holes deep down into the rock to find little pockets of gas and a liquid called oil.

The oil and gas found deep underground were once tiny sea creatures. They sank to the bottom of the sea and got squashed over millions of years. They turned into a dark liquid called oil and a gas called methane.

Coal is a black rock that gives off lots of heat when it burns. It is made from leaves that took in swamps millions of years ago.

We can burn oil, coal and methane gas to make electricity and to power vehicles.

Most metals are hidden underground with other rocks. A few metals are found just as they are at the surface, including gold, silver and copper.

Metals can make lots of useful things including bikes, phones, computers and cars.

Oceans

If you flew out into space and looked back at Earth it would look blue. That's because two thirds of our planet's surface is covered in liquid water. It's mostly found in the oceans and seas.

Waves

Waves are made on the surface of the water as the wind pushes the sea.

Tides

The sea comes in at high tide and goes out at low tide. This happens twice every day because of the way Earth is spinning beneath the Moon.

That's right, the Moon makes our tides! Gravity is a pull that happens between Earth, the Moon and the Sun. It pulls on you too. When you jump, gravity pulls you back down to Earth.

Low tide

High tide

The oceans on planet Earth slowly change shape because the rock beneath them is moving. This creates underwater valleys, caves and mountains.

Mountain

Valley

Did you know...? Seawater is salty because of salt from rocks!

Tell Me About: The Human Body

Big science for little readers

- The first in a brand-new series of non-fiction books for readers 4+.
- Written in friendly and engaging language by science educator and CBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung
- Cover finishes: matt lam and spot UV
- CONTENTS: Brilliant body; The skin; Skeleton; Muscles, Brain; Thinking; Nervous system; Eyes; Ears; Mouth and Nose; Digestive System; Blood; Water; Pumping blood; Lungs and breathing; Immune system; Feelings; Helping your body

Tell Me About: The Human Body

Brilliant Body

So many amazing things are happening in your body right now! Let's take a look at just a few of them...

As you breathe, spongy bags called lungs are sucking air in and putting it into your blood.

When you run, stretchy cords called muscles pull bones back and forward. Your bones connect together in a structure called a skeleton. And your skin wraps everything up.

Tiny electrical signals are making your heart beat - to-beat-to-beat - to pump blood around your body.

Your body is made from lots of different parts that work together to do important jobs. These parts are called organs.

If you look at the pictures in this book, you're using organs called eyes. And when you think about all of this, you use an organ called the brain.

When you think or laugh or wiggle your toes, you use energy. The energy comes from the food you eat. The food goes into your blood and all around your body.

The Skin

Let's begin our body tour with your skin. This stretchy waterproof layer wraps around your body keeping germs out and keeping your insides... inside!

Your skin is full of sensors that help you to touch and feel things. You can feel pain and warmth and the tiny footpads of an insect crawling on your arm.

Did you know...? The skin is the biggest organ in the body!

Touch sensors help you to feel how hard to press when you lift it and hold objects - so you don't drop or squash them.

The top layer of your skin is dead! Underneath it, new skin is being made. It pushes the old skin upwards until it flakes off as dust. Yes, your skin becomes dust!

Your hair and nails are made from the same stuff as skin. It's called keratin.

Your skin cools your body too. One way it does this is by making little drops of liquid called sweat.

When sweat drops are warmed by a hot body, they float off into the air taking heat away with them!

Skeleton

The thing that gives your body its wonderful shape and height is a skeleton. It is made from 206 bones that join together at hinges called joints.

Full your fingers! The bones are the hard parts, and the joints are where your fingers bend.

Strong bony bones called cartilage make up some parts of the skeleton including your ears, your nose and sections of your ribs.

The skeleton protects your insides too. Your ribs make a cage around your lungs and heart and your skull is like a helmet, protecting your brain.

Inside your biggest bones is a juice called marrow. New blood is being made in the marrow. That's right, your bones can make blood!

Bones are full of tiny holes that make them light. But the pattern of the holes makes them really strong too.

Muscles

Muscles are stretchy cords that pull body parts to make them move. If you wiggle your eyebrows and stick out your tongue, you did it using muscles!

Muscles can pull, but they can't push so they need to work in teams. One muscle pulls a body part one way, and another muscle pulls it back again.

Great teamwork muscles!

1. Bend your arm. The set of muscles at the front of your arm, called triceps, pulled it up by getting shorter.

2. Now straighten your arm. Another set of muscles at the back of your arm, called biceps, pulled your arm down to straighten it.

The muscles that move your bones around are called skeletal muscles. But they're not the only muscles you have!

Cardiac muscles make your heart squash to pump blood.

Smooth muscles line the tubes in your body. They help push things through the tubes.

Did you know...? Muscles help you hold in pee until you're ready to let it go.

The World's First Rollercoaster

Amazing inventions stories in comic-book form by Blue Peter Award-winner Mike Barfield.

- An irresistible way into science and technology with a dash of history from the brilliant Mike Barfield, author of *A Day in the Life of a Poo, a Gnu and You*, winner of the 2021 Blue Peter Award for a Book With Facts. Mike's books have sold in over 40 territories.
- Featuring the greatest inventions in architecture, travel, the home, food, fashion, toys, sports, technology and more, this book is packed with facts for curious minds. Includes tips on sending in a patent and profiles of young inventors alongside greats such as Diebedo Kere, Bertha Benz, Percy Spencer, Momofuku Ando, Kano Jigoro and Jawed Karim.

The World's First Human Cannonball

Roll up, roll up! Get your tickets for a whirlwind tour through history's weirdest and wackiest jobs!

- An irresistible exposé into the world of work from the brilliant Mike Barfield, author of *A Day in the Life of a Poo*, *a Gnu and You*, winner of the 2021 Blue Peter Award for a Book with Facts.
- Featuring the weirdest and wackiest jobs throughout the ages, this book is packed with facts for curious minds. Includes jobs in travel, science and sport, as well as the worst jobs in history... and some of the more curious jobs of today!

Earthlings

Na 100 dorosłych Ziemiaków 87 potrafi czytać i pisać, 87 poszło do szkoły podstawowej, 66 uczyło się w szkole średniej, 40 zdobyło jakiś rodzaj wykształcenia wyższego, a siedmiu ukończyło studia uniwersyteckie.

Dawniej umiejętność czytania i pisania była u Ziemiaków niezwykle rzadka. Pisać i czytać potrafili tylko przedstawiciele władzy, duchowieństwo i nauki. W Europie niezliczeni piśmiennicy posługiwali się wyłącznie łaciny. Książek, przepisywanych rękopiśmiennie, było mało. Były one bardzo drogie i dla

większości niedostępne. Dopiero wynalazek druku około 1450 roku, które spowodowało masową dostępność książek i gazet w językach narodowych, wpłynęło na rozpowszechnienie się umiejętności czytania. Zmienił się też sposób lektury: zamiast na głos zaczęto czytać cicho, prywatnie.

Przed 3000 laty w Egipcie i Mesopotamii zaczęto pisać. W 1800 roku w Europie było 100 000 000 osób, 25% - mniej niż 1000 osób, a 64 - tylko jedna albo dwie osoby. W 2050 lat temu Ziemiaków było 3000, w 2050 roku będzie ich już 10 000 000 000.

FAKTY NA KONIEC

There are eight billion Earthlings living on Earth.

There are more and more earthlings. 200 years ago, one billion people walked the planet. In 2056 there will already be ten billion.

More than half of Earthlings today live in cities, but for most of history, Earthlings lived mainly in villages. As recently as 200 years ago, 95 out of 100 Earthlings lived outside of the cities.

Nine out of ten earthlings in cities breathe polluted air.

Three out of ten residents of cities live in slums.

In the year 0, the Earth's population was 200 million, in 1000 - half a billion, in 1927 - two billion, and in 1960 - 3 billion. 55% of Earthlings live in cities. By 2050, cities will be home to 70% of Earthlings.

Tales from Beyond the Stars

An anthology of classic science fiction stories.

- Stories will be broken up with a series of 'theme' spreads, which will add a non-fiction element to the book. These spreads cover everything from the rise of the science fiction genre to how it has inspired real life inventions.
- There's a gap in the market for a striking, beautifully illustrated science fiction anthology.
- Evergreen publishing with strong backlist potential and global appeal.
- An opportunity to expand the Big Picture Press list into the adult gift market.
- Resurgence of interest in titles that offer readers 'escapism' on TikTok, including fantasy and science fiction

The Science of Sound

The Science of Sound

B P P

COVER TO BE REVEALED

**A visual exploration
of the science behind
sound and music.**

- An visually extraordinary take on the subject of sound
- Perfect for primary schools (on KS2 curriculum), but also the ideal gift book for general interest readers
- Engaging text by Trevor Cox - a professor of acoustics and engineering at Salford University.

Food from Flowers: The Great Pollination Investigation

Explore the secrets of nature in this pollination investigation.

- This non-fiction picture book is packed full of facts with information on photosynthesis, the pollination process, the life cycle of plants, flower anatomy, animal and insect pollinators, such as bats, bees, beetles, birds and more.
- Full of scientific information that supports the curriculum.
- Fun novelty elements help kids engage with the subject matter.
- This book is the perfect picture book for children aged 5+ who are fascinated by nature and the plants that grow in it.
- Bright and beautiful artwork from author-illustrator Deborah Hocking.

Discover the rich history, vibrant culture and unique identity of each nation through its flag!

- A vibrant exploration of our world's marvellous flags! Take a fact-filled and fun journey across the contents to discover all that lies in our national flags.
- Content is split into 5 chapters based on the continents: Europe, Asia, the Americas, Africa and Oceania. Each section features a chapter opener, 4-5 spreads looking at specific flags in detail, and a theme spread which looks at the world more broadly.
- Feature spreads look at an individual flag's history, symbolism and meaning, and also include 2 or more other flags which share a similarity in some way, whether that be a symbol, geographical location or a shared history.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

On a hot day, there's nothing better than a bowl of creamy, delicious ice cream. But how did it get there? The answer lies in a long history of frozen treats. In the 13th century, a recipe for a frozen dessert called 'ice cream' was recorded in a book. It was made with snow and fruit. The recipe was passed down through generations, and by the 17th century, it had become a popular treat in Europe. In 1846, an Italian immigrant named Francesco Selmi invented the first modern ice cream machine. This allowed for the mass production of ice cream, making it a popular treat for everyone. Today, there are over 100 different flavors of ice cream, and it's a beloved treat around the world.

Easy Ice Cream

32

Bicycle

"Freedom on two wheels"

15

Did you know that the first bicycle was invented in 1817? It was called a 'velocipede' and was made of wood. The first bicycle with a chain drive was invented in 1868. It was called a 'boneshaker' and was made of metal. The bicycle became a popular mode of transport in the late 19th century. In 1885, the first safety bicycle was invented. It had a diamond frame and equal-sized wheels. This design is still used today. The bicycle is a simple but effective mode of transport that has revolutionized the way we travel.

Pertious Penny-Farthing

33

Camera

"Snap photos"

24

Although it's often used to capture a moment in time, the camera is a complex piece of technology. The first camera was invented in 1826 by Nicéphore Niépce. It was called a 'chambre noire' and was used to create the first photograph. The camera has since become one of the most important inventions of the 19th century. It has revolutionized the way we document and share our lives. Today, cameras are used in a wide range of applications, from photography to video production.

Developed to Perfection

32

High-Speed Train

"No-speed railroads"

25

Before the 19th century, the only way to travel long distances was by horse-drawn carriage or steam train. The first high-speed train was invented in 1974. It was called the 'TGV' and was built in France. The TGV is a high-speed train that can travel at speeds of up to 320 km/h. It has revolutionized the way we travel between cities. Today, high-speed trains are used in many countries around the world.

Marvelous Maglevs

33

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine on a hill or in a field. These turbines are used to generate electricity from the power of the wind. The first wind turbine was invented in 1890. It was called a 'windmill' and was used to grind grain. The wind turbine has since become a popular source of renewable energy. Today, wind turbines are used in many countries around the world to generate clean energy.

Green Energy

42

Helicopter

"A soaring way to fly"

35

When you think of a helicopter, you probably think of a military helicopter. But the helicopter has a long history. The first helicopter was invented in 1783. It was called a 'aerostat' and was used to transport people and cargo. The helicopter has since become a popular mode of transport. Today, helicopters are used in a wide range of applications, from military operations to medical evacuations.

Versatile VTOLs

43

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles – no carts, cars, bikes, buses, trucks, trains, trams or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3200 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

26

Internet

"The world at your fingertips"

18

The invention of the Internet – a network of computers that 'speak' to each other – was a concentrated effort in the United States. The first computers were connected to each other in 1969 during the Cold War (1947–1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: LOGIN, but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want – books, food, holidays, cars – with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

Inside Story: How the News Works

Get the inside story on today's most important topics and learn to navigate the news like a pro!

- An all-encompassing, no-nonsense guide to the news industry, looking at how news is made, what and who it's for, what to look out for when digesting news and tips on how to be a savvy news-consumer.
- Written by expert authors from ITN news team, including tips from ITV's Charlene White. Informed by lived experiences of real journalists from across the news sector.
- News from a global perspective: look at key moments in news history and stories that shaped the world from Europe, America, China, Indonesia, India and more.

Inside Story: How the News Works

WHAT IS FAKE NEWS?

The most important thing about fake news is that it's completely untrue. It's often spread through social media and can be very convincing. It's important to be able to spot fake news so you can avoid being misled.

Don't believe the lies!

There are many ways to spot fake news. One way is to check the source. If the source is unknown or suspicious, it's likely to be fake. Another way is to check the date. Fake news is often spread quickly, so it's important to know when it was first published. You can also check if the news is being reported by other sources. If only one source is reporting it, it's likely to be fake.

How fake news creates mischief

Fake news can be used to spread lies and misinformation. It can be used to start arguments, spread fear, and even to influence elections. It's important to be able to spot fake news so you can avoid being misled.

Types of fake news

There are many types of fake news. Some are designed to be funny or entertaining, while others are designed to be serious and convincing. Some are spread through social media, while others are spread through traditional news outlets. It's important to be able to spot fake news in all cases.

NEWS ALERT
CITIZEN FAKE NEWS

WELCOME TO THE NEWSROOM

You've probably seen news stories written by a reporter or a news anchor. But how do they get their stories? What do they do in a newsroom? This page tells you all about it.

Meet our newsreader

Newsreaders are the people who read the news on television and radio. They are usually women, but there are also men. They are trained to read the news in a clear and professional way. They also have to be able to handle any questions that come up during the broadcast.

ON ASSIGNMENT

News reporters are the people who go out into the world to find out what's happening. They are usually men, but there are also women. They are trained to find out the facts of a story and to write a clear and concise report. They also have to be able to handle any questions that come up during the broadcast.

A newsreader's days behind the scenes

Newsreaders have a busy schedule. They have to be in the newsroom early in the morning to get ready for the broadcast. They have to read the news and to handle any questions that come up. They also have to be able to handle any technical problems that might arise during the broadcast.

WHO'S WHO IN THE NEWS PROCESS

There are many people who work in the news process. Each has a different role to play. This page tells you all about them.

Editors

Editors are the people who decide what news stories to publish. They are usually men, but there are also women. They are trained to select the most important and interesting stories. They also have to be able to handle any questions that come up during the broadcast.

On the road team

News reporters often have to travel to different parts of the world to find out what's happening. They are usually men, but there are also women. They are trained to find out the facts of a story and to write a clear and concise report. They also have to be able to handle any questions that come up during the broadcast.

NEWS ALERT
CITIZEN FAKE NEWS

Different rules for different countries

Every country in the world has its own rules and laws about who can publish news and what they can say. This page tells you all about it.

ASK ME ANYTHING

IS IT ALWAYS WRONG FOR NEWS ORGANISATIONS TO HAVE AN OPINION?

Not necessarily - as long as you know what that opinion is. But this might take a bit of investigating as it's not always obvious. There's a place for opinionated news but it needs to be clear that a report or feature is commenting on a story rather than reporting it.

Making your mind up

Hearing a range of views about a topic can often help you form your own opinions. Sometimes it's easy to know what you think about things. Do you like strawberries? No. Do you think koolhaas are cute? Yes. Do you like going on holiday? Absolutely!

Other times, questions are more complicated and it's important to have as much information as possible before making your mind up. Is nuclear power good or bad? Should school exams be banned? Should 16-year-olds be allowed to vote?

The news often looks at these trickier questions, so it's essential to know if a news platform has a specific opinion about the issues they're covering. That way you can work out if you're only hearing one side of a story or if you need to look elsewhere to find a balanced view.

It's my way or the highway!

Some news organisations make commitments to produce news that is impartial. Some examples are ITN, the BBC and the Associated Press. These values apply to all their platforms; whether you go to their social media pages, websites or watch them on TV, their content follows the same standards and rules.

But news platforms that aren't impartial can sometimes support the views of the person who owns them. Let's say a news organisation is owned by someone who loves lots of money from selling lemonade. It might not be in its interest to write reports that criticise lemonade, even if they are true. In fact, it could be more likely to report news that shows lemonade in a good light and only criticises other fizzy drinks.

Another big influence on news is politics. Just like the lemonade seller, news platforms might only publish positive news about a political group their owner supports and leave out negative facts and opinions. It's really important to make an informed decision on big topics like this, so it's a good idea to find another platform that reports the other side of the story too, or one that covers both.

NEWS ALERT

WHAT IS CLICKBAIT?

Clickbait describes a headline that is so outrageous or tempting that it makes you click through to read the whole story. The more clicks or views this content gets, the more money the owner makes from advertisers. They might look like real news stories but a headline about a celebrity trial sounds a bit suspicious. It might trigger a warning to think more deeply about whether the story is true. Think about whether you want those stories to make more money through your clicks!

SCIENTISTS DON'T WANT YOU TO KNOW TIPS ONE VIEWER THINK

FLYING PIP SUITED

ON ASSIGNMENT
NEWSPAPERS VS. BROADCAST NEWS VS. ONLINE NEWS

Find three versions of the same news story: one from a news organisation you know and trust, one from a news website you don't know and another is a print or online newspaper. Can you work out if they are fair and balanced or whether they have a specific point of view?

Small text describing the story of a new life.

Was Robert Smith's legend?

Small text describing the legend of Robert Smith.

JUNKO Tabei

Small text describing the story of Junko Tabei, a Japanese mountaineer who was the first woman to reach the summit of Mount Everest.

Small text describing her journey and the challenges she faced.

ROBERT SMALLS

Robert Smalls was born into slavery in 18th-century America, deep in the South. He was desperate for his family to escape to a better life. But the outbreak of the American Civil War seemed certain to end his hopes of freedom and safety.

As a child, Robert Smalls worked as an enslaved cotton picker on a plantation.

When he was 12, he was sent to Charleston as a labourer, working in a hotel and then as a lamplighter.

As a teen, he worked on the docks. He got to know the ships well and became a helmsman, in charge of steering the boat.

At 17, Robert got married and was desperate to buy his family's freedom. But for every \$15 he earned as an enslaved man, he was only allowed to keep a single dollar. This made it impossible to save the \$800 he needed. Robert was trapped, as his people had been for centuries, and he knew that if he wanted to be free, he would need to come up with a spectacular plan.

US CIVIL WAR 1861 - 1865

DREAMS OF FREEDOM

The American Civil War began in 1861 between the Southern States (the Confederacy) who wanted to keep slavery, and the Northern States (the Union) who did not.

In 1861, Robert was forced into service on a transport ship for the Confederate Army called the CSS Planter, delivering ammunition and supplies up and down the coast. The ship was led by Captain Bevela, with two other white officers and a crew of enslaved Black men.

The captain always wore a wide-brimmed straw hat to protect his head from the bright southern sun. This gave Robert the first glimmering of an idea...

Talking History

150 years of world-changing speeches

- An accessible look at political and social history, and issues that remain pertinent today
- Contemporary design and illustrations from André Ducci accompany engaging text
- Authors are experienced children's writers and academics with expert knowledge on the topics discussed. In 2021, Joan Haig was selected as one of prestigious Scottish Book Trust's authors in residence, working with a school in Aberdeen
- Sample contents: Abraham Lincoln, 'The Gettysburg Address', 1863; Jawaharlal Nehru, 'A Tryst with Destiny', 1947; Nelson Mandela, 'Speech from the Dock', 1964; Harvey Milk, 'The Hope Speech', 1978; Angela Merkel, 'Address to 68th Session of the WHO', 2015 and Severn Cullis-Suzuki, 'Listen to the Children', 1992,

Talking History

In 1903, in the city of Manchester, UK, Emmeline Pankhurst and her eldest daughter Christabel founded the Women's Social and Political Union (WSPU). The organisation campaigned fearlessly for women's right to vote.

THE SUFFRAGETTE MOVEMENT

This wasn't the first time that women in Britain had fought for the vote. Since the mid-nineteenth century, female campaigners called 'militants' had tried to win rights for women in society through peaceful petitions and, later on, by refusing to pay their taxes.

But this campaign was slow with few results. After years of unsuccessful peaceful protest by the suffragists, the WSPU decided that it was time for action - 'Deeds Not Words', as their motto said. Members of the WSPU took part in 'civil disobedience' to literally fight for their cause. They chained themselves to railings, hacked politicians' plants, bonked in empty buildings, and smashed windows in public places, constantly clashing with the authorities. They were so determined to achieve their political aims that they deliberately took part in violence and vandalism to influence the public and the government.

Newspapers began referring to militant WSPU campaigners as 'militants'. By 1910, the WSPU had branches all over the country.

THE CAT AND MOUSE ACT

Around 1,000 suffragettes were imprisoned for their 'substance' behaviour. While in jail, some continued to fight by going on hunger strikes, refusing to eat or drink. At first, they were released to prevent them from starving, but, by 1910, prison wardens began to force-feed them. Women were badly hurt, prompting public outrage at what was seen as government torture.

The government responded by passing the 1913 'Prisoners' (Temporary Discharge for Ill Health) Act. Under this new law, when women on hunger strike became critically weak, they were sent home. As soon as they recovered, they were promptly returned to continue their sentence. It was dubbed the 'Cat and Mouse Act' because of the way a cat plays with its prey repeatedly letting it escape before catching it again.

Emmeline Pankhurst was imprisoned and released 16 times! It was in 1913, in between prison sentences, that she visited the United States to campaign for support and funding. She addressed a group of women at the Parsons Theatre in Hartford, Connecticut, in a powerful speech attempting to justify the use of militant tactics in the fight for women's rights.

Together We Can

40 inspirational stories about teamwork

- Sample contents: **Science** Dark Matter (US), Marie and Pierre Curie (France) **Medicine** Penicillin (UK), Louis and Marie Pasteur (France), **Technology** Apple Inc. (US), **Conservation and Rescue** The Black Mamba Anti-Poaching Unit (South Africa), **Politics and Activism** The Magna Carta (UK), The United Nations (global) **Sport** The Olympic Games (global), The All Blacks (New Zealand), **Culture** LEGO (Denmark), BTS (Korea)
- A fully-illustrated anthology of 40 true stories about what human beings can accomplish when they work collaboratively.
- Includes stories from the fields of science, medicine, technology, conservation, politics and activism, sport and culture.

HUMAN GENOME PROJECT

In the same way, all the projects that require the information about who we are and how we are made. Come and join the team of scientists who are working together to create a 'human genome'.

THE 2010 COP19 MINING ACCIDENT

On 5 August 2010 there was a large-scale accident in the town of Copalim in northern Chile. The mine had been open since 1960 and had produced more than 1.5 billion tonnes of copper. The mine was owned by the state-owned company, Codelco. The mine had been open since 1960 and had produced more than 1.5 billion tonnes of copper. The mine was owned by the state-owned company, Codelco.

POLITICS AND ACTIVISM CLIMATE CHANGE ACTIVISM

The dangers of climate change are becoming clearer. The temperature of the Earth is rising.

Politics is not always seen as the best way to solve problems. But in the case of climate change, it is. The world's governments have agreed to work together to reduce the amount of carbon dioxide in the atmosphere. This is the Paris Agreement. It was signed in 2015 and it is the first time that all the world's major powers have agreed to do this. It is a big step towards solving the climate crisis.

Climate change activism is the way that people are trying to make their voices heard. They are protesting, lobbying politicians, and demanding that governments do more to tackle the climate crisis. They are also working to change the way we live and work to reduce our carbon footprint. Climate change activism is essential if we are to have any chance of solving the climate crisis.

SCIENCE CERN AND THE LARGE HADRON COLLIDER

CERN (Conseil Européen pour la Recherche Nucléaire) is the European Organisation for Nuclear Research. It is an international scientific research organisation for the study of high-energy particle physics. There is a huge CERN laboratory on the border between France and Switzerland which brings thousands of scientists from all over the world together to collaborate on groundbreaking

scientific research. Over 12,500 scientists of more than 110 nationalities collaborate at CERN. CERN is the home of the Large Hadron Collider, which is the largest and most powerful particle accelerator in the world. It cost around \$10 billion to create. It is a 27-km (17-mile) ring of superconducting magnets,

Sharing research means that scientists all around the world can collaborate and build on each other's work. CERN is the home of the Large Hadron Collider, which is the largest and most powerful particle accelerator in the world. It cost around \$10 billion to create. It is a 27-km (17-mile) ring of superconducting magnets,

which is big enough to circle the entire city of Geneva. It works by creating two beams of energy, then firing them at each other at nearly the speed of light. When the beams hit each other, tiny subatomic particles smash into each other and break apart, which gives scientists a glimpse of the building blocks of creation. It's incredibly difficult work, as the particles involved are so small. It's the equivalent of firing two needles 10 km (6 miles) away from each other and making them hit in the middle. The Large Hadron Collider has a special cryogenic cooling system to keep it at -271.3°C (-456.34°F), which

means that it is colder than outer space. The Large Hadron Collider was able to confirm the existence of the Higgs boson. The Higgs boson is a fundamental particle associated with the Higgs field, which gives mass to other particles. The Large Hadron Collider is the only place in the world where Higgs bosons can be studied. Previously, scientists had predicted the existence of these particles, but we did not have the equipment to study them. It's a very important piece of scientific discovery and helps us understand not only the past, but also the future of our

universe. Hundreds of scientists, engineers and programmers worked together on the Large Hadron Collider to make this scientific feat possible. While it is one of the most important pieces of scientific research to have ever been attempted, the Large Hadron Collider is still at the mercy of outside influences. Animals have managed to damage the Collider twice. In 2016 a weasel chewed through electrical wiring which meant the power had to stop, and there was another power outage in 2019 when a bird dropped a bit of baguette onto electrical equipment!

World of Sport

In this beautifully illustrated book, learn about the incredible variety of sports that are played around the world.

- A lively, inspiring and fact-filled exploration of a globally unifying topic: sport! From ancient times to today, covering every corner of the world.
- Featuring extensive coverage of women's sports and sporting heroes, plus sports from different, lesser-known regions and cultures around the world.
- Positioned to publish in time for the 2024 Olympic Games.
- With vibrant, energetic illustrations from Violeta Noy, author and illustrator of *The Right One*.

World of Sport

TRACK AND FIELD SPORTS
Track and field sports take place outdoors on a running track. Track events are running competitions and in field events, athletes compete in jumping and throwing events.

JAVELIN
The javelin is a spear-like object used in track and field events. The first javelin was made of wood and was used in ancient Greece. The modern javelin was invented in 1880 in Sweden. It is now made of metal and has a pointed tip.

LONG JUMP
The long jump is a track and field event in which the athlete jumps as far as possible into a sandpit. The long jumper must take a running start before jumping. The distance is measured from the take-off point to the end of the jumper's path.

GALINA CHISTAKOVA
Galina Chistakova is a Russian long jumper. She won the gold medal at the 1996 Atlanta Olympics. She is also a world champion and Olympic medalist.

DISCUS
One of the most beautiful events in the ancient world is called the Discobolus or 'discus thrower'. The statue is a Greek sculpture of a young man throwing a discus. It is one of the most famous works of ancient Greek art.

JAN SZENTI
Jan Szeñi is a Hungarian athlete. He is a world champion and Olympic medalist in the 100m sprint. He is also a member of the Hungarian national team.

AMERICAN FOOTBALL
American football is a team sport that originated in the United States. It is a contact sport that involves running with the ball and passing it to other players. It is the most popular sport in the United States.

AIM OF THE GAME
The aim of the game is to score points by running with the ball or passing it to other players. The team that scores the most points at the end of the game wins.

MEET THE TEAM
There are 11 players on the field. Each player has a specific role to play. The quarterback is the most important player on the team. He is responsible for passing the ball to other players.

MAKING A PLAY
Making a play involves running with the ball or passing it to other players. The team that scores the most points at the end of the game wins.

FOR READY
One of the most important skills in American football is the ability to run with the ball. This is called 'running the ball'. It is a key skill for all players.

RUGBY
Rugby is a team sport that originated in England. It is a contact sport that involves running with the ball and passing it to other players. It is one of the most popular sports in the world.

AIM OF THE GAME
The aim of the game is to score points by running with the ball or passing it to other players. The team that scores the most points at the end of the game wins.

MAKING A PLAY
Making a play involves running with the ball or passing it to other players. The team that scores the most points at the end of the game wins.

BASEBALL
Baseball is a team sport that originated in the United States. It is a contact sport that involves hitting a ball with a bat and running the bases. It is one of the most popular sports in the United States.

AIM OF THE GAME
The aim of the game is to score runs by hitting the ball with a bat and running the bases. The team that scores the most runs at the end of the game wins.

CRICKET
Cricket is a team sport that originated in England. It is a contact sport that involves hitting a ball with a bat and running the bases. It is one of the most popular sports in the world.

AIM OF THE GAME
The aim of the game is to score runs by hitting the ball with a bat and running the bases. The team that scores the most runs at the end of the game wins.

HOW SPORT BEGAN
People have always enjoyed getting together and competing to find out who's the strongest, fastest or best at something. Humans have been playing sport since ancient times.

WHAT WAS THE FIRST SPORT?
Can you see any ancient cave paintings on the map? We don't know for certain what the world's first sport was, but we can guess from these ancient artworks.

GRAND BEGINNINGS
The first competitive sport we know about was recorded in a famous story, the *Epic of Gilgamesh*, from 2100 BC. In it King Gilgamesh fights a wild man to see who is stronger.

Patata puripacha was played in the ancient Mexican city of Teotihuacan as long ago as 1500 BC. It was a bit like hockey except the ball was on fire!

In chunky, played for centuries by Native Americans, a stone disc was rolled across the ground. Teams throw spears to predict where they thought it would land.

The ancient Mayan ballgame of pitz was invented sometime between 2,000 and 4,500 years ago. Competitors had to get a ball through a stone hoop without using their hands.

Sometimes rival cities settled disagreements with pitz instead of going to war.

Stone pitz hoops can still be seen in ruined Mayan ball courts in South America.

Wall paintings made in caves in Lascaux, France, around 20,000 years ago, seem to show people running and wrestling.

Some ancient Egyptian tomb paintings demonstrate wrestling positions.

The army of ancient Rome played harpastum, a dangerous sport a bit like rugby, as a way of training their soldiers.

During the Western Zhou Dynasty (1046-771 BC), archery was part of the education of wealthy men.

In boat jousting, two people in a boat would fight with long poles or 'maces'. Ancient Egyptian carvings show fishermen jousting. They tried to push each other into the river Nile!

Surfing has been popular in the Pacific for hundreds of years. In Hawaii, chiefs competed in fierce competitions, and good surfers could win high social status.

The Maori of New Zealand participated in a competition known as the *Māori Games* - often between neighbouring villages. Men, women and children all competed in canoe races, athletics and martial arts.

Raising the Roof

A cool introduction to classical music

- Broadcaster, songwriter, composer and Scala Radio presenter Jack Pepper is an exciting, young voice in classical music.
- A fun and approachable introduction to classical music
- Includes a playlist, so you can listen as you read
- **SAMPLE CONTENTS:** Hildegard of Bingen 1098-1179; Claudio Monteverdi 1567-1643; Barbara Strozzi 1619-c. 1664; JS Bach 1685-1750; Joseph Bologne 1745-1799; Ludwig van Beethoven 1770-1827; Richard Wagner 1813-1883; Giuseppe Verdi 1813-1901; Ethel Smyth 1858-1944; Arnold Schoenberg, 1874-1951; Igor Stravinsky, 1882-1971; Florence Price, 1887 - 1953; George Gershwin, 1898-1937; Leonard Bernstein, 1918-1990

Raising the Roof

SYMPHONY

The symphony has changed over the centuries, but it is essentially an extended piece of music for a large group of players. The word had even been the Greek, meaning 'sounding together'. It is often a composer's lifetime piece because the size and cost of the orchestra is hard to pull off.

A symphony is often in four movements, with no set number of tracks. There are five movements, which are the norm, but some composers have written symphonies with as few as two movements or as many as seven. However, symphonies usually consist of four movements.

LEARNING TIP
Have a go at writing your own symphony. It's a challenge, but it's a great way to learn about the structure and style of this genre.

1800s
The first symphony was written by Joseph Haydn in 1760. It was a single movement, but it was the beginning of a new genre.

1776
The first symphony with four movements was written by Wolfgang Amadeus Mozart in 1776. It was a landmark work.

1800s
The first symphony with a full orchestra was written by Ludwig van Beethoven in 1800. It was a landmark work.

1872
The first symphony with a full orchestra and a large chorus was written by Giuseppe Verdi in 1872. It was a landmark work.

1748
The first symphony with a full orchestra and a large chorus was written by George Frideric Handel in 1748. It was a landmark work.

Present
The first symphony with a full orchestra and a large chorus was written by Gustav Mahler in 1900. It was a landmark work.

Richard Wagner

1813-1883

To Listen or Not to Listen...
Can we appreciate opera for the music? Or is it just a vehicle for the story? Wagner's operas are a mix of the two. He was a pioneer in the way he wrote music for the stage, and his operas are still performed today.

Wagner had a lot to say and did things his way. He pushed music to its limits and revolutionised everything. He had to invent a new language.

Wagner's Sound
Wagner's music is often described as 'music for the theatre'. It is a mix of music and drama, and it is a powerful symbol of the human condition.

LISTEN!
Listen to Wagner's music and you will be transported to a world of music and drama. It is a powerful symbol of the human condition.

George Gershwin

1898-1937

George Gershwin's Sound
Gershwin was a pioneer in the way he wrote music for the stage. He was a mix of music and drama, and it is a powerful symbol of the human condition.

LISTEN!
Listen to Gershwin's music and you will be transported to a world of music and drama. It is a powerful symbol of the human condition.

Hildegard of Bingen

1098-1179

Here's someone who was, in every sense, a visionary Hildegard of Bingen had visions of God and wrote them down as poems and music.

Hildegard's Sound
Her music is often monophonic - a single line, a tune on its own (mono means one, phonic means sound). This creates a sense of calm, perfect for a focused, intense contemplation of faith. Hildegard wrote mostly sacred plainchant (where people all sing the same line, with religious texts used for the words), intended for use in church. Her abbey consisted of 50 nuns who all had trained voices and would sing daily. It's believed a Benedictine nun at the time would sing for eight hours each day! With an in-house choir, then, an abbey provided an ideal testing ground for new music. Music becomes a form of prayer, and having everyone sing the same line creates a powerful symbol of togetherness through faith.

Learning by Ear
The Greeks were the first to use letters of the alphabet to represent different notes. Yet until the Middle Ages, almost all music was passed down the generations by mouth, instead of being written down. There was a lot to learn in the 600s, monks in churches are estimated to have memorised 80 hours of music, all by ear! By the 900s, it took around 10 years to teach a young chorister all the pieces they'd need to know for future services. And you think school is intense...

LISTEN!
A Feather on the Breath of God sung by Gothic Voices

Hildegard was a Bible-leaver name even in musical circles, until early music became widely performed and recorded from the 1970s onwards. One of the recordings in this album, released in 1985.

She sent me a letter!

And a botany book to me!

I'm scheduling that next tour!

Ancient Love Stories

A striking collection of love stories from ancient history.

- Final contents - Sappho (ancient Greek), Nebuchadnezzar II and Amytis (Babylonian), The Sacred Band of Thebes (ancient Greek), Sima Xiangru and Zhuo Wenjun (Chinese), Mark Antony and Cleopatra (ancient Rome), The Lovers of Pompeii (ancient Rome), Hadrian and Antinous (ancient Rome), Eloise and Abelard (French), Frances Howard and Robert Carr (English), Shah Jahan and Mumtaz Mahal (Indian), The Sanchos (USA)
- Written by award-winning classicist and author, Emily Hauser.
- Featuring a range of true stories from around the world, discover the astonishing lengths humankind have gone to in the name of love.
- A list of Sander's publishers: US - Penguin Random House; Germany - Knesebeck Von Dem GmbH

Ancient Love Stories

THE SACRED BAND OF THEBES

This was the final meeting place of the Sacred Band of Thebes, one of the most remarkable and most loyal armies that had ever lived. A bold experiment in an open town square by attacking war and heroes alike, who had died fighting for the freedom of the Greeks. An army, not just of soldiers, but of a hundred and fifty noble lovers.

Born together by love loyalty to each other, the crack team of warriors was founded in Thebes in 378 BC by an extraordinary visionary by the name of Pammenes. It began as a resistance corps against the looming military power of Sparta (recovered the world over for its legendary military prowess across the continent to the south. These were chivalry, aristocratic, open, splashing blood across the pages of history, and well suited to the birth of a new kind of army.

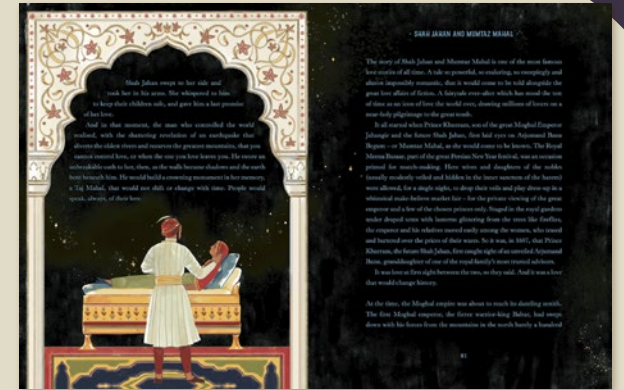

HERODIAS AND ANTOCHUS

These parts first crossed across years earlier, when Herodias - ruler of the Roman world and self-proclaimed prince of peace - took a summer jaunt across the Roman province of Bithynia, in northern Turkey, where Antiochus had his home. The emperor, busy with his job, probably did not spot Antiochus among the crowds of adoring subjects and eager petitioners. But one of his mistresses did - and, as usual, with an eye to the emperor's favor, spent a night in the palace in the beautiful bedroom-like young man. Antiochus was duly offered a dinner invitation to the palace imperial suite along with a tuition package to the emperor's personal academy in Rome. To his boy from a distant village on the fringe of the Roman empire, this must have seemed an offer too good to be true - a one-way ticket to live among the stars. But, in any good student of mythology would have known, by invitation to dinner and you might get burned.

Antiochus' rise to the top was meteoric even by Roman standards, where there were plenty of holy emperors who made it to the big time. Set among the other staff of the imperial household, Antiochus - handsome, good-looking, smart, with a magnetic personality and a sensitive taste for Herodias' favored love - quickly caught the emperor's eye. Herodias was instantly besotted, and Antiochus became his paragon. In the summer of 128 BC, at the age of seventeen, Antiochus was personally selected to accompany Herodias on a tour of Greece (Herodias was a notorious Greek sympathizer, then said - Asia Minor and, finally, Egypt.

It was clear to everyone that Herodias was willing to let Antiochus out of his sight - and together, they took part in many extraordinary experiences on their around-the-world trip. A night-long dip into mystical events at the Thracian Mountain of Gaea. A bank here built in the highlands of Asia Minor. A quest - about the searching out of Herodias' much-loved Greek mythology books - to take down a mountain lion that had been terrorizing the people of Licia. On all these adventures, the new obsession with each other grew steadily.

SHAH JAHAN AND MUMTAZ MAHAL

The story of Shah Jahan and Mumtaz Mahal is one of the most beautiful love stories of all time. A tale of passion, devotion, tragedy and ultimate sacrifice, their love story is a testament to the power of love. Mumtaz Mahal, the great favorite of Shah Jahan, was a woman of rare beauty and intelligence. Her father, the ruler of the noble, wealthy province of Agra, was a member of the ruling elite.

It all started when Shah Jahan, second of the great Mughal Emperor Jahangir and the former Shah Jahan, had had eyes on Mumtaz Mahal. Begotten - or Mumtaz Mahal, as she would come to be known. The First Mumtaz Mahal, great of the great Prince Shah Jahan, was a woman of rare beauty and intelligence. Her father, the ruler of the noble, wealthy province of Agra, was a member of the ruling elite. Her father, the ruler of the noble, wealthy province of Agra, was a member of the ruling elite.

At the time, the Mughal empire was down to nearly its founding levels. The first Mughal emperor, the first emperor, Shah Jahan, had made a deal with his father from the mountains in the north, finally a hundred

MARK ANTONY AND CLEOPATRA

wafted by attendants dressed as cupids and sea-nymphs: Cleopatra. Ruler of Egypt. Goddess of the Nile. Queen of one of the wealthiest countries in the world. Beautiful, certainly, at just twenty eight, but more than anything, utterly, alluringly certain of her star-quality charisma. As one writer put it, "her sex appeal, together with her powers of persuasion and her ability to charm all around her, made her simply, irresistibly desirable." This was who had come to call on Mark Antony, one of the most powerful men in Rome (and so, at that time, the world). Antony was a soldier, a devotee of the wine-god Dionysus, a playboy extraordinaire - a man, in other words, who lived life in vivid technicolour.

If anyone was going to make Rome's fun-loving general pay attention, it was going to be the young queen sailing towards him dressed in gold.

But there was more to this than just sex appeal. For Antony, vying to hold onto his position of power amidst the remains of the crumbling Roman Republic, Cleopatra meant Egypt, and Egypt meant two things: grain and gold. Both were essential to fund (and feed) his battle for world domination. For Cleopatra, Antony meant Rome's backing for her precarious hold on power back home, following a decade of civil war, during which the young queen had gone into exile and returned with an army to take the throne from her brother. No meeting could be more important for either of them. It was a moment well worth a bit of theatre, not to mention a spot of role play.

There are Reptiles Everywhere

An illustrated introduction to reptiles, now in paperback.

- The colourful exploration of reptiles follows on from Britta Teckentrup's *There are Fish Everywhere* and *There are Bugs Everywhere*
- Lush and colourful illustrations to immerse young readers in the natural world
- Lively text and use of search-and-find element make these books informative and interactive.
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally

There are Reptiles Everywhere

IT'S A REPTILE! (SO WHAT / IS THAT?)

Reptiles don't have fur or feathers. Instead, their skin is covered in scales or bumpy plates, or both. But reptiles lay eggs, and some of them give birth to live babies. See the examples below.

TURTLES AND TORTOISES
Turtles and tortoises are the only reptiles that can live in water. They have a hard shell called a carapace. Turtles are smaller and live in the ocean. Tortoises are larger and live on land.

COLD BLOOD
Reptiles are cold-blooded. This means they can't control their body temperature. They have to rely on the sun to warm up and the shade to cool down.

LONG POWER
Some snakes can swallow their prey whole. They don't have teeth. Instead, they use their long, forked tongue to taste their food.

IT'S A BIG FAMILY!
Did you spot alligators and crocodiles, the extinct dinosaurs, and the Komodo dragon? Reptiles are a huge family!

COCKROACHS!
There are 40,000 species of cockroach. They are the most common insects on Earth. They are found everywhere, even in your kitchen.

LEAFHOPPER
Leafhoppers are small insects that hop. They are found in grassy areas. They are known for their ability to jump high into the air.

SNAKES
Snakes are reptiles that have no legs. They can move in many different ways, including slithering, crawling, and swimming.

REPTILES HAVE BEEN AROUND FOR AGES

Reptiles have been around for 300 million years. They were the first vertebrates to live on land. They were also the first to lay eggs that could hatch into a young animal.

Reptiles were the first to have a four-limbed body plan. They were also the first to have a backbone.

Reptiles were the first to have a brain. They were also the first to have a heart.

Reptiles were the first to have a stomach. They were also the first to have a liver.

Reptiles were the first to have a pancreas. They were also the first to have a spleen.

Reptiles were the first to have a bladder. They were also the first to have a rectum.

Reptiles were the first to have a ureter. They were also the first to have a penis.

Reptiles were the first to have a vagina. They were also the first to have a clitoris.

Reptiles were the first to have a vulva. They were also the first to have a perineum.

Reptiles were the first to have a rectum. They were also the first to have an anus.

Reptiles were the first to have a tail. They were also the first to have a tailbone.

Reptiles were the first to have a tail fin. They were also the first to have a tail finbone.

Reptiles were the first to have a tail fin ray. They were also the first to have a tail fin raybone.

Reptiles were the first to have a tail fin spine. They were also the first to have a tail fin spinebone.

Reptiles were the first to have a tail fin muscle. They were also the first to have a tail fin musclebone.

Reptiles were the first to have a tail fin nerve. They were also the first to have a tail fin nervebone.

Reptiles were the first to have a tail fin blood vessel. They were also the first to have a tail fin blood vesselbone.

Reptiles were the first to have a tail fin lymphatic vessel. They were also the first to have a tail fin lymphatic vesselbone.

Reptiles were the first to have a tail fin endocrine gland. They were also the first to have a tail fin endocrine glandbone.

Reptiles were the first to have a tail fin excretory organ. They were also the first to have a tail fin excretory organbone.

Reptiles were the first to have a tail fin reproductive organ. They were also the first to have a tail fin reproductive organbone.

Reptiles were the first to have a tail fin sensory organ. They were also the first to have a tail fin sensory organbone.

Reptiles were the first to have a tail fin motor organ. They were also the first to have a tail fin motor organbone.

Reptiles were the first to have a tail fin integumentary organ. They were also the first to have a tail fin integumentary organbone.

Reptiles were the first to have a tail fin excretory organ. They were also the first to have a tail fin excretory organbone.

Reptiles were the first to have a tail fin reproductive organ. They were also the first to have a tail fin reproductive organbone.

Reptiles were the first to have a tail fin sensory organ. They were also the first to have a tail fin sensory organbone.

Reptiles were the first to have a tail fin motor organ. They were also the first to have a tail fin motor organbone.

Reptiles were the first to have a tail fin integumentary organ. They were also the first to have a tail fin integumentary organbone.

WHERE DO REPTILES LIVE?

Reptiles prefer warm places, but they can make their homes anywhere. All they need is something to sit on, somewhere to hide in, and somewhere to shelter when they need to rest, hide or cool down.

COLD-SEA SHARES
Cold-sea sharks live in the deep ocean. They are found in the North Atlantic, the North Pacific, and the North Indian Ocean.

SALTY SEA SHARES
Salty sea sharks live in the shallow ocean. They are found in the North Atlantic, the North Pacific, and the North Indian Ocean.

DEEP-SEA SHARES
Deep-sea sharks live in the deep ocean. They are found in the North Atlantic, the North Pacific, and the North Indian Ocean.

DESERT REPTILES

Reptiles live in hot, dry deserts, where it rarely rains and the plants are green. Snakes and lizards live in the desert. Some, which spend most of their lives on the ground, are called scorpions.

SIDEWINDERS
Sidewinders are a type of lizard. They are found in the desert. They are known for their ability to move quickly across the sand.

COOLING DOWN
Reptiles don't have a way to cool down. They have to rely on the shade to keep cool. They are found in the desert.

ART REPTILES
Art reptiles are a type of lizard. They are found in the desert. They are known for their ability to move quickly across the sand.

RAINFOREST REPTILES

This is Borneo, a large island in Southeast Asia, and it's a reptile paradise. From the longest snake in the world to a flying dragon, more than 250 species of reptile live happily in the steamy heat of the rainforest. It's nice and warm, there's plenty of food and there are lots of places to hide.

Asian forest tortoise
The fearless Asian forest tortoise protects her eggs by piling a mound of leaves on top. If a predator comes snooping around, she'll quickly add more leaves and stand on top to guard her babies.

Orange-headed flying dragon
Watch out - this Draco lizard is on the move! Thin sheets of skin between its ribs act like a parachute as it glides to the next tree. Gliding is much faster than climbing up and down.

Spiny terrapin
Wise spiny terrapins stay on their guard. They may have a hard, sharp-edged shell, but that's no defence against fierce neighbourhood predators like the saltwater crocodile.

Saltwater crocodile
A saltwater crocodile lurks in the shadows. Its nostrils and eyes are on top of its head, so it can stay out of view while watching for something tasty to cruise by - like a nice, crunchy spiny terrapin.

Blue coral snake
Beware a hungry blue coral snake! Its bright orange head and tail are a warning that it's very dangerous, with venom that can kill in minutes. Luckily, its favourite food isn't people, but other deadly snakes!

False gharial
Anyone brave enough to put their head inside a false gharial's mouth would be able to count more than 80 razor-sharp, pointy teeth.

Tokay gecko
A strange sound can be heard in the rainforest. It's a colourful tokay gecko, named after the male's loud call of "to-kay-to-kay". He's calling out to attract a mate.

Reticulated python
The world's longest snake is about to take a dip. It's a reticulated python and it can grow to a monstrous 10 metres long. Female pythons lay their eggs in hollow trees and look after them until they hatch.

Saltfin lizard
The saltfin lizard has a miraculous talent. When it takes fright, it heads to the river and runs across the water. It doesn't sink straight away because it runs so quickly and has big, wide feet that trap air beneath them.

CAN YOU FIND?
Small and dainty, the green crested lizard scuttles through the trees. Its bright green skin blends in with the background, but it turns brown when it's scared. There are six green crested lizards hiding, but how many of them are feeling frightened?

There are Mammals Everywhere

An illustrated introduction to mammals.

- A combined quantity of over 100,000 copies worldwide (as of July 2022) has sold for Britta's *There Are...* series
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally
- Contents: There are mammals everywhere; It's a mammal! So what is that that?; Mammals have been around for ages; Where do mammals live?; The savannah; Staying alive; Feeding; Moving (elephant spotlight spread); Mammal parents; Mali elephants; Birds and people
- The colourful exploration of mammals follows on from Britta Teckentrup's *There are Fish Everywhere*, *There are Bugs Everywhere*, *There are Reptiles Everywhere* and *There are Birds Everywhere*.

There are Mammals Everywhere

IT'S A MAMMAL! (SO WHAT IS THAT?)

There are almost 6,000 species of mammal alive today. Mammals may look very different on the outside, but they all have **skullcaps** that allow them to perform a wide range of movements. Some mammals have four legs and a tail, but others walk on two legs, fly using two wings, or have flippers and fins.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn. They can also remember things for a long time.

BREATHING AIR
Mammals have lungs. They breathe in air from the outside world. This means they can live on land, in water, or in the air.

RECORD-BREAKERS
Mammals are the only animals that can fly. They are also the only animals that can hibernate. Some mammals can live for a long time. They can also live in very hot and very cold places.

BATS
Bats are the only mammals that can fly. They have wings made of skin stretched over their forelimbs. They can fly at night and eat insects.

CATS
Cats are the only mammals that can retract their claws. They have sharp claws that they can pull back into their skin. This helps them climb trees and catch prey.

SEALS
Seals are the only mammals that can live both on land and in water. They have flippers that help them swim. They also have a thick layer of blubber to keep them warm in the water.

MAMMALS HAVE BEEN AROUND FOR AGES

Mammals have been around for a really long time. The first mammals looked like shrews, which are tiny animals with long, pointed snouts. They lived about 200 million years ago. Other mammals looked like birds and some of them grew much bigger than cats. Over the years, mammals have changed a lot. Some have become very different from the ones that first appeared. They have learned to live in all kinds of places, from the mountains to the sea.

PROBOSCIDEANS
Proboscideans were among the earliest mammals. They had long, trunk-like noses that they used to dig for food.

MAMMALS
Mammals are the only animals that have hair. They also have mammary glands that produce milk for their young.

PRIMATE
Primates are a group of mammals that includes humans, apes, and monkeys. They have large brains and are very intelligent.

RODENT
Rodents are a group of mammals that includes mice, rats, and squirrels. They have long, sharp front teeth that they use to chew their food.

REPTILE
Reptiles are a group of animals that includes snakes, lizards, and turtles. They have scaly skin and lay eggs.

SAURIA
Saurians are a group of reptiles that includes lizards and snakes. They are very diverse and live in many different environments.

SWINE
Swine are a group of mammals that includes pigs and boars. They have long snouts and are very intelligent.

TURTLE
Turtles are a group of animals that includes sea turtles and tortoises. They have hard shells that protect them from predators.

WHALES
Whales are a group of mammals that live in the ocean. They are the largest animals on Earth and breathe air through a blowhole.

WHY ARE MAMMALS UNIQUE?

Mammals are a large and very successful group of animals. They have been able to spread across the world and survive in all kinds of habitats because they have some unique ways to stay warm, find their young and get food.

WARM BLOOD
Mammals are endothermic, which means they can control their body temperature. This means they can live in very hot and very cold places. They have a higher body temperature than most other animals.

BIG BRAINS
Mammals have big brains for their body size. This means they can think and learn. They can also remember things for a long time.

SEA OTTERS
Sea otters are the only mammals that live in the sea. They have a thick layer of blubber to keep them warm in the water. They also use their paws to hold their prey.

WHALES
Whales are the largest animals on Earth. They live in the ocean and breathe air through a blowhole. They are very intelligent and can communicate with each other.

SEA OTTERS
Sea otters are the only mammals that live in the sea. They have a thick layer of blubber to keep them warm in the water. They also use their paws to hold their prey.

SEA OTTERS
Sea otters are the only mammals that live in the sea. They have a thick layer of blubber to keep them warm in the water. They also use their paws to hold their prey.

WHERE DO MAMMALS LIVE?

Nearly all species of mammals live on land - about 98 per cent of them. However, there are groups of mammals that spend most, or all, of their lives in water. These include **pinnipeds, whales and dolphins**. Other groups of mammals are superb swimmers and spend lots of time in the water, but choose to stay on land when they give birth or raise their young.

WHALES
Whales are perfectly adapted to life in the ocean. They have smooth skin and torpedo-shaped bodies that slip easily through the water. They have flippers instead of legs and they breathe using blowholes on the top of their heads.

WHALES
Whales are perfectly adapted to life in the ocean. They have smooth skin and torpedo-shaped bodies that slip easily through the water. They have flippers instead of legs and they breathe using blowholes on the top of their heads.

WHALES
Whales are perfectly adapted to life in the ocean. They have smooth skin and torpedo-shaped bodies that slip easily through the water. They have flippers instead of legs and they breathe using blowholes on the top of their heads.

BEAVERS
Beavers belong to a group of mammals called **rodents** that have super-strong front teeth. They use these teeth to gnaw trees and branches and use the wood to build their homes in the middle of a pond or slow-flowing river.

BEAVERS
Beavers belong to a group of mammals called **rodents** that have super-strong front teeth. They use these teeth to gnaw trees and branches and use the wood to build their homes in the middle of a pond or slow-flowing river.

WHERE DO MAMMALS LIVE?

Nearly all species of mammals live on land - about 98 per cent of them. However, there are groups of mammals that spend most, or all, of their lives in water. These include **pinnipeds, whales and dolphins**. Other groups of mammals are superb swimmers and spend lots of time in the water, but choose to stay on land when they give birth or raise their young.

TUNDRA
The land around the Arctic is called the **tundra** and it is famous for its snowy blizzards and blustery winds. It is a difficult place to live - unless you can stay snug inside your own super-thick fur coat. **Musk oxen** have hair that almost touches their toes and they snuggle up next to each other to get the benefit of some buddy-body-warmth!

FORESTS
Tropical forests are packed with tall trees that bloom all year round, producing plenty of fruit for any animals that can reach it. **Orang-utans** spend almost all of their lives in the branches, using their strong arms to climb from tree to tree, following the fruit as it ripens.

DESERTS
Deserts are very dry habitats that experience extreme temperatures. **Bactrian camels** survive desert life by storing food and water as fat inside their two **humps**. They grow thick, shaggy fur for the icy winter, and shed it for the hot summer months.

CAVES
Many species of bats gather together in caves in big groups called **colonies**. They rest during the day by hanging upside down from the cave ceiling and go hunting at night. Some caves can house more than five million bats!

CAN YOU FIND?
Other animals like to camp out in a beavers' lodge, including **water voles**. Can you find one of those small, furry rodents with a long tail?

There Are Amphibians Everywhere

An illustrated introduction to amphibians.

- Contents: There are amphibians everywhere; It's an amphibian! (So what is that that?); Amphibians have been around for ages; Where do amphibians live?; How do amphibians live?; Moving; Feeding; Life stories; Metamorphosis; Staying alive; Tropical terrors (poisonous frog spotlight spread); Amphibians and people
- Britta's There Are... series has sold a combined quantity of over 100,000 copies worldwide (as of July 2022)
- Lush and colourful illustrations to immerse young readers in the natural world
- Lively text and use of search-and-find element make these books informative and interactive.
- Britta's 'One is Not a Pair' series has sold 250,000 copies internationally

Art is Everywhere

A playful introduction to art history.

- Growing demand for children's art books that aren't biography or activity
- Fresh, inspiring take on a strong topic
- Highly accessible angle - discusses ideas and techniques that can be applied to art anywhere and everywhere
- Author is a knowledgeable art historian with a witty, unique tone, and years of experience with leading art workshops for children
- Both UK and international sales have seen demand for more 'art' titles. A great opportunity for us to show support for suffering creative arts scene and fill a gap on our list.
- Subjects covered - Why Do we Make Art?, Brush Strokes, Patterns, The Power of Colour, Art Can be Anything, Symbols

The Spaces In Between

Have you found the spaces in between? The secret places no one else has been? This beautiful picture book celebrates themes of anxiety and kindness. Now available in paperback.

- Written by TED speaker, poet, activist and ex-secondary school teacher, Jaspreet Kaur
- Beautifully bright and busy artwork by award-winning illustrator, Manjit Thapp
- Non-fiction pages at the back of the book offer mindfulness tips and activities to try at home

Celebrate the achievements made in medical engineering and take a glimpse into the future.

- Sample contents: The First Prosthetics, Jack E. Steele - Father of Bionics, Arne Larsson - The First Pacemaker Patient, How Cochlear Implants Work, Eye Replacements, Keith Hayman - The First Bionic Eye, How Bionic Limbs Work, Campbell Aird - The First Prosthetic Arm, Exoskeletons, Neural Implants, The Paralympics, Neil Harbisson - The First Cyborg, Ethics
- Phenomenal artwork by highly acclaimed artist Samuel Rodriguez
- As told by UK Sepsis Ambassador Patrick TJ Kane
- The first of its kind - a book that celebrates the history of medical implantables and prosthetics

PROSTHETIC LEGS THROUGH THE AGES

Roman Empire, 300 BC
The earliest example of a prosthetic leg is from the Roman Empire. These were made of wood and leather. The legs were attached to the body with a metal ring. They were used for both military and civilian purposes.

Middle Ages, c. 1200
In the 13th century, a French inventor created a prosthetic leg made of wood and leather. It was attached to the body with a metal ring. This was a significant improvement on the Roman design.

16th-17th Century, 1500-1700
In the 16th and 17th centuries, prosthetic legs were made of wood and leather. They were attached to the body with a metal ring. These were used for both military and civilian purposes.

19th-20th Century, 1800-2000
In the 19th and 20th centuries, prosthetic legs were made of wood and leather. They were attached to the body with a metal ring. These were used for both military and civilian purposes.

Modern Bionics
In the 21st century, prosthetic legs are made of metal and plastic. They are attached to the body with a metal ring. These are used for both military and civilian purposes.

BLAKE LEEPER

"Life is 10% what you deal with and 90% how you deal with it."

Retired American Paralympic athlete Blake Leeper was born in 1980 with both of his legs missing below the knee. Leeper's father was a coach, so he grew up with a natural affinity for sports. Leeper wanted to pursue a career in athletics, but a prosthetic leg made being that difficult. He had to learn to run and jump like the rest of the world.

Thanks to Leeper's hard work and determination, he was able to make his debut for the US Paralympic team in 2008. Since 2012, Leeper has won a total of eight Paralympic medals for his country, and even set a world record in the 400m race in 2012. His remarkable achievements have led to 2012 being named the first Paralympic athlete to compete against able-bodied Olympic athletes at the US Track & Field Championships.

Since Leeper's career, there has been a lot of progress in 2020. The United States Paralympic team has won a total of 100 medals, and Leeper's team has won a total of 10 medals. This is a testament to the hard work and determination of the Paralympic athletes.

BEYOND BIONICS

So far, bionics has been playing catch-up with the body parts they are trying to emulate. While the devices available today have changed a lot, they are still not as smooth, functional, sensitive and efficient as the organs and limbs that bionics has promised. As we look at the next advancements that have been made since the start of the last century, we can be certain that technology will replace the human. Instead of giving them the capabilities we wish for, we will be giving them the capabilities we have. This is the future of bionics.

Science and technology will continue to advance at an exponential rate. This will lead to a world where bionics is not just a prosthetic, but a replacement. This will lead to a world where bionics is not just a prosthetic, but a replacement. This will lead to a world where bionics is not just a prosthetic, but a replacement.

Looking further ahead, it could be possible to replace all of our body parts with bionics. This would mean that we would be able to replace our body parts with bionics. This would mean that we would be able to replace our body parts with bionics.

EYEWEAR

Eyeglasses may seem commonplace today, but it has taken hundreds of years to develop them to where they are now, helped by a series of inventions along the way. The ancient Romans first wrote about using glass beads to read, similar to how reading glasses work today. However, it was the Arab scientist Al-Hasan Ibn al-Haytham, a man known as the 'father of modern optics', who first wrote about using convex (outwards curved) lenses to magnify an image. Eventually, Ibn al-Haytham's literature made its way to Western Europe, and translations of his work led to glass 'reading stones' becoming common. The Italians improved further on these stones to create the first eyeglasses in the late 1200s.

New materials have allowed frames for glasses to become lighter and more durable. The colour of lenses has changed too, creating the first purpose-built sunglasses. These work by adding cerium oxide (a type of chemical compound) into the glass to filter out harmful ultraviolet light from the sun. Sunglasses quickly became fashionable, and in 1938, it was reported that 20 million sunglasses had been sold the year before in the US. Interestingly, only a quarter of those people needed sunglasses for medical reasons. This development is an example of a product that was initially designed to benefit a few but ended up benefitting many. It is testament to the importance of innovation within the disabled community.

The latest breakthrough in eyewear has come more recently, with EnChrome® glasses first launching in 2012. These special glasses are designed to help alleviate problems caused by colour-blindness.

People who are colour-blind find it difficult to distinguish between certain colours, such as red and green. EnChrome® glasses use the same principle as cerium oxide in the first sunglasses, but instead of filtering out harmful UV light, EnChrome® glasses filter out the wavelengths of light that get confused by the brain in those people with red-green colour vision deficiency.

Our Time on Earth

This book about animal life cycles is a celebration of creatures big and small.

- **WINNER of the Association for Science Education Award 2022**
- Sample contents: Mayfly; Honey Bee; Monarch Butterfly; Opossum; Etruscan Shrew; Giant Pacific Octopus; Axolotl; Trapdoor Spider; Grizzly Bear; Brandt's Bat; Orangutan; Laysan Albatross; African Elephant; Saltwater Crocodiles; American Lobster; Galapagos Giant Tortoise; Bowhead Whale; Greenland Shark; Immortal Jellyfish
- Consulted by wildlife cameraman and producer Fredi Devas, who has worked on David Attenborough's One Planet: Seven Worlds BBC series.
- Discover creatures who are born within a day of their mothers, or others who stay infantile for almost one hundred years.

Up in the Canopy

Explore the jungle layer by layer with a huge fold-out surprise at the end.

- James Aldred's book *The Goshawk Summer* won the 2022 James Cropper Wainwright Prize for Nature Writing.
- Written from the perspective of real-life Emmy-nominated cameraman and explorer, James Aldred
- Stunningly illustrated - with artwork as rich and dense as the rainforest itself
- Huge fold-out tree at the back of the book, which readers can pore over.
- Matt lam, fluoro pantone and spot UV finishes.

This visually extraordinary book presents the history of money as it has never been seen before - from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

DIFFERENT KINDS OF MONEY

Money comes in many forms, but this book doesn't cover all of them. It has to be used to buy things. There are several reasons why money might be used. Some money is used because it is easy to carry around. Some is used because it is easy to exchange for goods and services. This is called commodity money. Another kind is fiat money, which is used because a government tells it is valuable. This is called fiat money.

COMMODITY MONEY
The earliest form of money was a commodity, something that had value in itself. Some of the earliest forms of money were shells, beads, and stones. These were used because they were easy to carry around and could be exchanged for goods and services. Commodity money is still used in some parts of the world today. For example, some people in rural areas of Africa still use cowrie shells as money.

REPRESENTATIVE MONEY
Representative money is a form of money that represents a certain amount of a commodity. It is used because it is easier to carry around than the commodity itself. For example, a gold coin represents a certain amount of gold. Representative money is still used in some parts of the world today.

FIAT MONEY
Fiat money is a form of money that is used because a government tells it is valuable. It is not backed by any commodity. Fiat money is the most common form of money used in the world today.

LEGAL TENDER
Legal tender is a form of money that is used because it is the law. It is used because it is the most common form of money used in the world today.

CASE
Cash is money in the physical form of banknotes and coins. It is used because it is the most common form of money used in the world today.

CURRENCY
A currency is a system of money units. It is used because it is the most common form of money used in the world today.

A WORLD WITHOUT MONEY

To understand why money is useful, let's try to imagine a world without money. In such a world, the only way to get hold of the things you need would be to make or grow them, or steal them from other people. These people are called barter. Barter is the exchange of goods or services for other goods or services without using money.

BARTER AND GIFTS
Barter is the exchange of goods or services for other goods or services without using money. It is used because it is the most common form of money used in the world today.

THE PEOPLES WITH BARTER
The people with barter are those who do not use money. They exchange goods and services for other goods and services. This is used because it is the most common form of money used in the world today.

COMMODITY MONEY
Commodity money is a form of money that has value in itself. It is used because it is the most common form of money used in the world today.

WHAT MAKES A GOOD FORM OF MONEY?

The various forms of money were very different to the money we use today. There was no paper or printing press or machines to make money. People had to make it with their hands. They used the natural world. All of the first forms of money were made of natural materials. These were used because they were easy to carry around and could be exchanged for goods and services.

LEATHER MONEY
Leather money was used in ancient times. It was made of animal skins and was used because it was easy to carry around and could be exchanged for goods and services.

SHAPED PRODUCTS
Shaped products were used as money in some parts of the world. These were used because they were easy to carry around and could be exchanged for goods and services.

LEATHER MONEY
Leather money was used in ancient times. It was made of animal skins and was used because it was easy to carry around and could be exchanged for goods and services.

QUIRKY CURRENCIES

Many unusual objects were used as money in the era before notes and coins. These included foodstuffs such as barley, rice, corn and wheat. The Chinese used tea bricks to pay for things, whereas the Aztecs used cacao beans, and the peoples of ancient Africa and the Middle East measured value in coffee beans. The Mesopotamians kept sacks of grain in protected barns, much like the banks of today. When stored carefully, these foods could provide a reasonable store of value. But a storm or a bad harvest could wipe out your wealth.

MONEY YOU CAN EAT
Some surprising foods have been used as units of exchange in different parts of the world. Here are some of them.

BUTTER
The Pilgrims of the island of Yap used butter as money. They used it because it was easy to carry around and could be exchanged for goods and services.

CHEESE
In the early 1800s, the people of the island of Yap used cheese as money. They used it because it was easy to carry around and could be exchanged for goods and services.

EELS
Dried and smoked eels were used as money in some parts of the world. They were used because they were easy to carry around and could be exchanged for goods and services.

COCONUTS
For the Kusa Yaku, who live on islands off the coast of Papua New Guinea, coconuts were used as money. They were used because they were easy to carry around and could be exchanged for goods and services.

EGGS
In the early 1800s, the people of the island of Yap used eggs as money. They used it because they were easy to carry around and could be exchanged for goods and services.

POTATO MASHERS

In ancient Cameroon, potato mashers were used as a currency. These heavy iron objects, called ensusbas, were shaped like a club.

KISSI PENNIES
The kissi penny was a currency used mainly in West Africa in the first half of the twentieth century. They were long iron rods, usually arranged in bundles of twenty. A cow could be bought for 30 or 40 bundles.

IRON SNAKES
The Lobi tribe of Burkina Faso used iron snakes as a currency. They would also attach them to their calves as a protection from snake bites and lightning.

KNIVES
Large bronze knives circulated as currency in ancient China between 600 and 200 BCE. According to one story, this started when a prince who was running low on money to pay his troops allowed them to use their knives to pay for goods in the local village.

RAI STONES
The small Pacific island of Yap possesses the world's biggest money. Rai stones are huge discs of rock weighing up to 8 tonnes each. The stones are rarely moved, and are not used for day-to-day transactions, but they change hands as ceremonial gifts, to forge alliances, resolve conflicts or to apologise for wrongdoing.

From Cells to Ourselves

From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

From Cells to Ourselves

HOW DID LIFE BEGIN?

THE 1920s American chemist Stanley Miller and British physicist James Watson conducted the first experiment to simulate the conditions of the early Earth. They used a mixture of gases and water vapor to create a 'primordial soup' from which life might have emerged.

THE 1950s British scientist Francis Crick and American physicist James Watson discovered the structure of DNA, the molecule that carries the genetic code.

THE 1960s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell.

THE 1970s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 1980s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell.

THE 1990s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 2000s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell.

THE 2010s American biologist James Watson and British physicist Francis Crick discovered the structure of DNA, the molecule that carries the genetic code.

THE 2020s American biologist Lynn Margulis proposed the theory of endosymbiosis, which suggests that mitochondria and chloroplasts were once free-living organisms that were taken into a larger cell.

THE DINOSAUR DETECTIVES

In the 19th century, scientists discovered, investigated and named many species of dinosaurs. But for a long time, these dinosaurs remained hidden.

MARY ANNING (1804-1847) was a young girl who lived in Lyme Regis, Dorset. She was known for her discovery of fossilized sea shells and other marine life. In 1830, she discovered the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur. This discovery led to the discovery of the first dinosaur, the ichthyosaur.

WILLIAM BUCKLAND (1784-1861) was a geologist and naturalist. He was known for his discovery of the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur. This discovery led to the discovery of the first dinosaur, the ichthyosaur.

RICHARD OWEN (1804-1892) was a geologist and naturalist. He was known for his discovery of the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur. This discovery led to the discovery of the first dinosaur, the ichthyosaur.

OSBORN MARTELL (1850-1932) was a geologist and naturalist. He was known for his discovery of the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur. This discovery led to the discovery of the first dinosaur, the ichthyosaur.

THE GREAT OCEAN WASH RIVALRY was a competition between two geologists, Richard Owen and Osborn Martell, to discover the first fossilized dinosaur bone. Owen discovered the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur. Martell discovered the first fossilized dinosaur bone, a tooth-like structure called an ichthyosaur.

THE END OF THE DINOSAUR AGE

For a long time, people believed that the dinosaurs were a separate group from the other animals that lived on Earth. But in the 19th century, scientists discovered that dinosaurs were actually a group of animals that lived on Earth. This discovery led to the discovery of the first dinosaur, the ichthyosaur.

THE DINOSAUR AGE was a period of time when dinosaurs lived on Earth. It lasted from about 250 million years ago to about 65 million years ago. During this time, dinosaurs were the dominant animals on Earth.

THE END OF THE DINOSAUR AGE was a period of time when dinosaurs lived on Earth. It lasted from about 250 million years ago to about 65 million years ago. During this time, dinosaurs were the dominant animals on Earth.

THE END OF THE DINOSAUR AGE was a period of time when dinosaurs lived on Earth. It lasted from about 250 million years ago to about 65 million years ago. During this time, dinosaurs were the dominant animals on Earth.

THE END OF THE DINOSAUR AGE was a period of time when dinosaurs lived on Earth. It lasted from about 250 million years ago to about 65 million years ago. During this time, dinosaurs were the dominant animals on Earth.

EARLY IDEAS ABOUT EVOLUTION

How long is a million seconds? Have you been alive for one billion seconds? What was happening a million days ago? We find it very difficult to comprehend these huge numbers. If we don't have a feel for how long a million seconds is, how can we possibly comprehend time spans of millions or billions of years? This is one reason why some people have a problem with evolution. The idea that single, primitive cells evolved into all the species that have ever lived seems incredible, unless you get to grips with the timespans involved.

In ancient Greece, philosopher Anaximander suggested that one type of animal could change into another, while Empedocles thought that new types of living things could be made from a range of parts that already existed.

There's NO WAY he's getting into elephants on that boat.

Zam, I've got it now later.

The naturalist George-Louis Leclerc proposed a way for the Earth to have formed from debris in space. Although he believed in spontaneous generation, he thought that animals could change as they migrated to different conditions. This later explains the discovery of elephant fossils in North America, and mammoth fossils in Siberia, although living elephants are today only found in Africa and South Asia. He suggested the American ones had become extinct, while the mammoths had changed as they migrated south.

I've got it!

Erasmus Darwin was Charles Darwin's grandfather. He was a doctor, poet and naturalist, and in his book Zoonomia, or 'The Laws of Organic Life' he was one of the first people to propose a theory of evolution. He never hit on the idea of natural selection, but did recognise the importance of sexual selection (see page 59) and realised it could cause changes in species.

GRADUAL CHANGES

In the early 1800s Jean-Baptiste Lamarck, inventor of the terms 'invertebrate' and 'biology', was the first person to develop a coherent theory of the development of life on Earth and its evolution. He believed that life had originated by spontaneous generation, rather than creation by deity, and had then become more complex and varied over many generations. Lamarck suggested how this could happen. His idea is often called the 'Theory of Evolution by Acquired Characteristics'. In simple terms, he thought that the more an animal used an organ during its lifetime, the more well-developed it would become and that these changes could be inherited by offspring if both parents had the same developments.

THE EVOLUTION OF THE GIRAFFE'S NECK, ACCORDING TO LAMARCK:

- 1) Early giraffes had short necks.
- 2) Giraffes reach upward to graze on leaves.
- 3) This stretches their necks very slightly over their lifetimes.
- 4) The next generation of giraffes inherits these slightly longer necks.
- 5) This process is repeated over many generations until we arrive at modern, long-necked giraffes. Lamarck was not suggesting that their necks suddenly shoot out like telescopic poles!

THE PROCESS ALSO WORKED THE OTHER WAY:

- 1) Early penguins had wings with which they could fly.
- 2) Penguins spend most of their time swimming and very little flying.
- 3) Their wings become smaller, with smaller feathers, from lack of flying.
- 4) The next generation of penguins inherits these smaller, more flipper-like wings.
- 5) This process is repeated over many generations until we arrive at the modern penguin, which can no longer fly and whose wings are now adapted to help it swim instead.

From Shore to Ocean Floor

From sandy beaches to mysterious, inky depths, this beautiful book is the story of ocean exploration.

- Sequel to *Balloon to the Moon*, winner of the 12-16 category in the British Book Design and Production Awards
- A wonderful combination of mythology, science and history that takes readers on a narrative journey through one of the world's most fascinating stories of exploration
- Gill Arbuthnott is a former secondary school science teacher.
- Made in consultation with the Maritime Museum.

Art of Protest

Discover the power of words, images and much more in this analytical and thought-provoking look at protest art.

- Stunning artwork by contemporary artists around the world
- As told by TED talker, activist, lecturer and artist De Nichols
- De's *Mirror Casket* project was commended by legendary activist Angela Davis in Smithsonian Magazine.
- **WINNER OF THE BRITISH BOOK DESIGN & PRODUCTION AWARDS IN THE CHILDREN'S TRADE 9 TO 16 CATEGORY!**
- **WINNER OF THE 2023 BOLOGNA RAGAZZI AWARD!**
- Uncoated and fluoro pantone cover treatments with flaps.

Art of Protest

Protest art often makes use of symbols, which can quickly convey powerful meaning.

SYMBOLISM

Paper Cranes

In Japan, it is believed that someone who folds 1,000 origami cranes will be granted a wish. In 1945, two-year-old Sadako Sasaki was in the vicinity of the atomic bomb dropped on Hiroshima. She suffered long-term effects from that exposure, including developing leukaemia. Before she died at the age of 12, Sadako folded more than 1,000 cranes, and the paper crane went on to become a symbol of peace.

The Peace Sign

The peace sign was created by the British artist Gerald Holtom in 1958 as the logo for a campaign for nuclear disarmament in the UK. It has since become an iconic symbol of calls for peace.

Umbrellas

During protests for democracy in Hong Kong in 2014, activists used umbrellas as shields against tear gas and other aggressions by the police. The umbrellas came to symbolize the protests and gave the movement its name (read more on pages 52-53).

The Clenched Fist

The image of an upraised clenched fist is a powerful symbol of protest and resistance. Some of its first uses were by labour unions in the early 1900s, before it grew in popularity and became a symbol of many causes, including Black Power, the anti-apartheid movement and the feminist movement.

The Rainbow

The rainbow is the most iconic symbol of the LGBTQ+ movement. It represents diversity, acceptance and the spectrum of human sexualities and genders.

A stunningly illustrated tribute for train lovers of all ages, celebrating the ingenuity of trains past, present and future.

- Sample contents: The First Railways; Steam Locomotions; The Ffestiniog Railway; The Orient Express; Freight Trains; The Baikonur Cosmodrome; Mail by Rail; The California Zephyr; Mountain Railways; The Darjeeling Himalayan Railway; Trams; Sky Lines; Railways At War; The Princess Christian; High-speed Rail; The Shinkansen
- Beautiful artwork by multi award-winning artist Ryo Takemasa
- Stunning journey through the history of locomotives, suitable for all ages
- Expertly written by railway historian, Alastair Steele

Locomotion

THE FIRST RAILWAYS

Today, railways are commonplace in many parts of the world. They enable around one billion people to travel around the world, and transport goods and millions of passengers every single day. It is amazing to think that they have only been around for less than 200 years.

Railways were first used in the 18th century in Europe. They were used to transport heavy goods, such as coal, iron, and stone. The first railway was built in 1782 in Cornwall, England. It was used to transport tin ore from the mines to the coast.

The first steam engines were used in Britain in the 18th century. They were used to pump water out of mines. The first steam engine was built by James Watt in 1769. It was used to pump water out of mines in Scotland.

One of the first steam engines was built in 1769 by James Watt. It was used to pump water out of mines in Scotland. The first steam engine was built in 1769 by James Watt. It was used to pump water out of mines in Scotland.

THE GAUGE

One of the most important things to get right when building a railway is the gauge. The gauge is the distance between the rails. It is important because it determines the size of the wheels on the trains. If the gauge is too narrow, the wheels will be too small and the train will be unstable. If the gauge is too wide, the wheels will be too large and the train will be too heavy to pull.

The standard gauge was first used in Britain in 1825. It was used for the Stockton and Darlington Railway. The standard gauge was first used in Britain in 1825. It was used for the Stockton and Darlington Railway.

STEAM LOCOMOTIVES

Once the possibility of mass-produced engines had been realized, a whole host of locomotives were tried and tested around the world. Some proved to be better than others, but the one that really changed the course of history was the one designed by engineer Robert Stephenson (George Stephenson's son - see page 51) to provide the principles of design for the rest of the steam locomotives that followed.

The first steam locomotive was built in 1804 by Richard Trevithick. It was used to transport iron ore from the mines to the coast. The first steam locomotive was built in 1804 by Richard Trevithick. It was used to transport iron ore from the mines to the coast.

- RAILWAYS OF THE WORLD - THE FESTINIOW RAILWAY

The Festiniow Railway is a small but significant engineering feat. It was built in 1825 and is the only railway in the world that was built on a steep slope. The railway was built to transport slate from the mines to the coast. The Festiniow Railway is a small but significant engineering feat. It was built in 1825 and is the only railway in the world that was built on a steep slope.

The Festiniow Railway is a small but significant engineering feat. It was built in 1825 and is the only railway in the world that was built on a steep slope.

ELECTRIC LOCOMOTIVES

The first electric train was tested as far back as 1837. Unlike steam trains, electric locomotives do not carry fuel on-board. Instead, they are powered by electricity which can be supplied from overhead lines, a third rail or in storage such as batteries. Because electric trains can be powered by renewable energy sources, they are considered less polluting than steam or diesel trains.

The first electric passenger train was presented by Werner von Siemens at an exhibition in Berlin in 1879. Consisting of a small locomotive and three cars, it reached a speed of just 13km/h.

The ETR 200 is a record-breaking electric passenger train. It is widely considered one of the first ever high-speed trains and was put into service in 1936. In 1938, it broke the speed record for trains by reaching just over 201km/h.

The ICE (Intercity Express) is one of Germany's most successful electric trains. The third generation ICE 3 can reach speeds of 300km/h. Since 2018, it has run on entirely renewable energy sources.

DIESEL LOCOMOTIVES

In a diesel locomotive, the power comes from an engine that burns diesel oil. While a steam locomotive needed two people to crew it and hours to attain the right steam pressure, a diesel locomotive could simply be switched on and driven away, making them much easier and much cheaper to run. Rudolf Diesel patented his first diesel engine in 1898, but it wasn't until around 1912 that they were first used in a locomotive.

The famous DRG Class SVT 877 *Hamburg Flyer*, often referred to as the 'Flying Hamburger', was first put into service in 1933. Its smooth, rounded shape was influenced by Zeppelin airships allowing for minimal air resistance.

The De10s, built in 1956, was considered the most powerful diesel locomotive in the world at that time.

The Intercity 125 is one of the most successful diesel trains of all time. So named because it was designed to cruise at 125 mph (about 201km/h) when in service, it also holds the all-time speed record for diesel trains of 238km/h, which it reached in 1987.

On The Streets of New York

A vibrant and collectable new series celebrating cities around the world - starting with New York.

- Beautifully presented and produced - with strong branding and a collectable feel.
- Each spread will act as a snapshot of a different part of the city. Non-fiction spreads at the back of the book will add further information about landmarks and history.
- Each book will be written by a poet from the city - who will be able to celebrate the hidden parts of the city, as well as the main landmarks.
- Paris proposed as book two
- Aimed at ages 7+ - perfect for reading aloud together.

Gorgeous canines of every shape, size and colour bound through this book - all 101 of them!

- The perfect gift for dog lovers big and small
- Beautiful cover treatments including foil and ribbon
- Humorous and engaging text written by dog expert Nicola Jane Swinney

Basenji

In the native Africa, the Basenji is known as 'the dog that doesn't bark'. While many dogs are often said to be 'sage to please', that just doesn't apply to this one. It is lively, imaginative and playful, but it does have a children's streak. The Basenji will usually learn what you want to teach it, but whether it will obey your commands depends entirely on its mood. That impertinent mind can be a problem, too, as anything you have lying around is likely to be investigated by your Basenji – usually by means of chewing. All that said, the Basenji makes a lovely pet as it adores people and playtime.

Life Expectancy 12-15 years | Height 45-50cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

Tibetan Mastiff

If you look like a giant teddy bear but this mighty mastiff is not the dog for everyone. While it has a gentle and loving nature, its sheer size can be a bit off-putting, and it is strong-willed. The Tibetan Mastiff sees itself as an equal, rather than a pet, and can be very stubborn. It is thought these amazing dogs lived in Tibet thousands of years ago and were used as guards (not many people would stand up to a 60kg dog) for monks, known as 'lamas'. This is where they developed their thick coat to cope with the harsh climate.

Life Expectancy 10-14 years | Height 60-70cm | Trainability Good for children | Grooming Needs brushing but doesn't shed much | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I can get up there!

Shiba Inu

The resident of its dog breeds native to Japan, the Shiba Inu greets the world with quiet dignity. But it's like a little single warrior, moving quickly and nimbly. The Japanese have three words to describe this breed, *harae* (upright backbone), *oyasoi* (good nature) and *ishiki* (stoicism). It also tends to be possessive – like a nooky toddler, the Shiba Inu doesn't like to share and if it could spare, it's first word would be 'mine'. It's also a natural hunter, so if you let it off the lead while out on a walk, it will probably disappear in the direction of the nearest squirrel.

Life Expectancy 12-15 years | Height 40-45cm | Trainability It has a stubborn streak | Grooming Very little | Exercise Needs to be exercised | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Parash Hound

This elegant hound was developed to hunt gazelle with pharaohs in ancient Egypt, more than 4,000 years ago. Despite its noble past, the Parash loves people and simply loves life. It's a natural clown – you can even teach a Parash to 'roll' and it's possibly the only breed that can blink – when it's happy or excited, its nose and ears will turn a deeper shade of pink. But as a hunting hound, it has a strong prey drive and is likely to chase anything it sees, so keep it on the lead at all times.

Life Expectancy 12-15 years | Height 50-60cm | Trainability Easy | Grooming Very little | Exercise Needs to be exercised | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Saluki

Praised by the travelling people of the Middle East, this ancient breed is thought to take its name from the Arabian city of Sals. To the Greeks, it was a noble dog indeed and they kept precise records of breeding and hunting prowess. They hunted hare, fox and gazelle from horseback, so their heads had to be fast of foot. There were once two different types of Saluki – short and mountain – but the two have merged into the modern breed. It has, however, retained its beauty and some of its speed, so be prepared to do a lot of jogging...

Life Expectancy 12-15 years | Height 60-70cm | Trainability Intelligent | Grooming Weekly brushing | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Alaskan Malamute

This impressive breed is one of the oldest in the world and has changed very little, still resembling its wolf ancestors. It was used by the Mahomet people to pull sleds and hunt seals. It is a strong and imposing animal, but it isn't much use as a watchdog – Malamutes regard everyone they meet as friends. They rarely bark, but make a charming 'woo-woo' noise. They're intelligent too, which means they can easily get bored... and a bored Malamute is trouble in waiting. They love to dig holes in the garden, or sniff across the kitchen counters for something tasty, so keep them busy!

Life Expectancy 10-14 years | Height 60-70cm | Trainability They can be quite stubborn | Grooming Needs brushing | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I'll be on your side

Tibetan Spaniel

This little dog likes to climb! Almost cat-like, it will try to find the highest perch from which it can watch over everyone and everything. Resembling a small lion (a powerful symbol in Tibet), it was highly prized as a watchdog. This watchful quality has been bred into the Tibetan Spaniel for thousands of years and it takes its role very seriously – don't even think about farting and blaming it on someone else in its presence! But don't expect your dog to be happy on its own. Tibetan Spaniels like company and get bored quickly – left to themselves they are likely to bark.

Life Expectancy 12-15 years | Height 25cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

Afghan Hound

With its slender, exotic face, long silky hair and lithe body, the Afghan Hound is surely the supermodel of the dog world. And as well as being one of the most beautiful breeds in the world, the Afghan is possibly the oldest. It comes from Afghanistan, where it was known as the Tazi, and was used to hunt dangerous animals, such as leopards. It was not only brave, but also extremely fast, capable of running at speed for many kilometres. Its independent nature means it does like attention, but on its own terms.

Life Expectancy 10-12 years | Height 60-66cm | Trainability This independent mind can be challenging | Grooming Lots of brushing | Exercise It needs plenty of room to move | Most likely to say Look how beautiful I am! | Least likely to say Give me a cuddle

Disney Fascinating Facts

Over 1,000 real-world facts to entertain all ages!

- Cover: gloss lam.
- Features facts about plants, the oceans, animals, the environment, the night sky, insects, literature, art, theatre, music, fashion, general history, Greek myths and legends, Mayan and Aztec history, Arthurian legend, space, robotics, chemistry, biology, physics, inventions, things that go, toys and games, sport, adventure and exploration, the continents and much more.

Disney Fascinating Facts

NATURE: PLANTS

There are around 75,000 different species of trees on Earth, and amazingly over 100 per cent of them can only be found in a single country! If you want to see the most unique trees in one place, head to Colombia and behold the tree that has the thickest trunk in the world.

Summer means giant sunflowers cropping up all over the place. But did you know that the 'bees' of a sunflower is a parasitoid, or parasitic wasp, and it's actually made up of many small flowers?

The Wolffia family of plants, also known as duckweed or watermeal, grow on the top of water and include the smallest flowering plants. Wolffia can be grown from seed, but can also store itself on a rocky road. The heaviest recorded stone took just under 30 hours to produce.

The baobab tree, sometimes known as the tree of life, is found largely in the continent of Africa and Australia. They can be massive in height and circumference, with some species reaching up to 22 metres tall and others 25 metres around!

Upland rice originated in Europe in the 19th century. In the 17th century, it was introduced to the Netherlands, the demand was so great that they started to be more expensive than gold! However, the market faded and left lots of people with a very expensive plant collection that they couldn't sell!

Some fungi communicate via a system of underground threads called mycelium, which can connect them across several kilometres. If one of them is being eaten, it will send a signal through the mycelium to warn others and allow them to decompose a resistant chemical.

Everybody knows the smell of freshly cut grass, however, it's actually a distress call that the grass is giving off. When cut, the grass releases phenolamines that some scientists believe is a call to help signal the attack!

The yucca tree, also known as the Brazilian grass tree, doesn't have fruit dangling from branches like apples and lemons. Instead, the fruit grows directly from the trunk of the tree, so it looks like it's growing in a janky hole!

You can tell the age of most trees when they're chopped down by counting the number of rings the trunk has, but it can also show how well the tree has grown each year. The ring will be thicker if you had an abundance of resources, or thinner when there haven't been as many.

We all know that trees need sunlight and water to survive, but aren't there much water do they need? Some oak trees can drink up to 800 litres of water a day, but that's nothing compared to the giant sequoia, which will drink up to four times that!

The oldest documented tree in the world is known as Methuselah, a Great Basin bristlecone pine that grows in the White Mountains of California, USA. It has lived for over 4,800 years!

The baobab tree, sometimes known as the tree of life, is found largely in the continent of Africa and Australia. They can be massive in height and circumference, with some species reaching up to 22 metres tall and others 25 metres around!

SCIENCE

It doesn't matter whether scientists are looking inside your body or to the far reaches of the universe, incredible discoveries are being made every day in the world of science. Now it's your turn to explore amazing facts from the laws of robotics and dwarf planets to the atoms that make up the Earth and everything in the cosmos!

SCIENCE: SPACE

Our solar system has eight planets and one space in 2007. Since then, thousands of comets have been discovered, but only a few have been named. Astronomers have captured our planets and travelled to Earth's moon and nearby stars, spacewalk may take explorers to Mars and beyond.

The first satellite, Sputnik 1, was launched into space in 1957. Since then, thousands of comets have been discovered, but only a few have been named. Astronomers have captured our planets and travelled to Earth's moon and nearby stars, spacewalk may take explorers to Mars and beyond.

Some of our solar system's planets are pretty cool. Whereas Earth only has one moon, Saturn has 82 natural satellites that are bigger than Mercury!

Venus rotates on its axis so slowly that one day there is equivalent to 283 days on Earth. However, it only takes Venus 225 Earth days to orbit the sun, meaning the Venusian day is longer than a Venusian year!

Earth isn't the only planet that has volcanoes! In fact, if you travel just one planet along to Mars, you'll find a volcano called Olympus Mons, which is over 600 kilometres wide and 21 kilometres tall. It's almost three times the height of Mount Everest and scientists think it could still be active!

Researchers at Yale University think they've discovered a new type of planet. It's called 55 Cancri e, a rocky planet that's possibly formed of diamond! Unfortunately, it's 40 light years away, so we can't visit it (yet) to see some precious gems!

Space is completely empty! Sound travels in vibrations in the air, but space is a bit of a vacuum - it has no air or atmosphere! Astronauts have to use radio waves to communicate so that they can talk in space.

Humans have barely scratched the surface of outer space. To the future, probes and human accompanied expeditions will continue to explore. Technologies based on Earth, such as telescopes and spaceprobes that sense wavelengths invisible to the human eye, will also help scientists learn about our universe.

Enochian, one of Saturn's moons, is dotted with ice geysers! These geysers spray water vapour from deep beneath the moon's surface. The upper floors naturally when it leaves the ground. The frozen crystals block out Enochian's atmosphere, when they form an icy ring. The possibility? Frozen water would be proof!

SCIENCE: SPACE

The Sun generates energy by converting hydrogen into helium, which releases its energy. When no more hydrogen is available, it will be replaced by a red giant star and will expand to reach Mars, making Earth uninhabitable. Don't worry, it will take another 5 billion years to reach us!

Jupiter is a composite of the same elements as our sun - hydrogen and helium - so it has all the ingredients to be a star. However, even though it's the biggest planet in our solar system, it would need to be at least 80 times bigger to start burning!

Our solar system has eight planets, but it's also home to the dwarf planets Eris, Haumea, Makemake, Ceres and Pluto as well as countless asteroids because they don't clear the orbits of objects in their close vicinity.

Universal speed limits, sometimes known as probes, have visited every planet in our solar system. The first probe to visit any planet beyond Earth from space was Venus 6, which launched in 1967, while further ahead, Cassini orbited Saturn for over a decade!

In the observable universe - that's all of it - there are more stars than grains of sand on all the beaches on Earth. It's estimated that a million Earths could fit into the space that the sun occupies!

Though it's always growing, the Sun is already pretty huge. It's estimated that a million Earths could fit into the space that the sun occupies!

NATURE

Whether you're looking at the creepy-crawly beneath your feet, or the starry sky above you, you're surrounded by the amazing natural world. Read on to discover incredible trivia about everything from mosquitoes and polar bears to talking mushrooms and bright stars millions of miles away!

NATURE: PLANTS

As well as being delicious, strawberries are one of the only fruits that grow their seeds on the outside - sometimes up to 200 of them! In fact, they're technically not seeds, but something called an achene, which is an individual fruit that holds a seed!

The biggest flower in the world is the *Rafflesia arnoldii*. It can grow to over 1 metre wide. It doesn't have its own root system, so latches onto other plants to grow. Don't sniff this flower though - its smell has been likened to rotting meat!

Pitcher plants have jug-shaped leaves and produce a nectar that entices insects and other small creatures inside. The leaves of the pitcher plant close once an animal falls in, and chemicals called enzymes digest the creature so the plant can use the nutrients!

No plant grows faster than bamboo. A Chinese bamboo variety called moso can grow almost a metre in a single day! It doesn't waste its energy growing any wider, so it can concentrate on shooting straight up.

Ferns are some of the oldest plants on Earth. They've been around since before the Mesozoic Era, which was when dinosaurs took their first steps on the planet, over 360 million years ago!

Some animals only eat plants, but sometimes the plants bite back! The Venus fly trap has hinged leaves that look like a toothy mouth. If an insect touches the hairs inside the leaves, they snap shut so the insect can't escape. It can take the Venus fly trap up to five days to digest the trapped insect!

Real world science behind superhuman powers.

- The science behind Marvel super heroes' and villains' powers is explained in this fun, informative and accessible book for kids aged 8+
- Super heroes and villains in the book include: Spider-Man, Miles Morales, Moon Girl, Iron Man, Captain America, Hulk, Black Panther, Ant-Man, Fantastic Four, X-Men, Professor X, Wolverine, Magneto, Thor, Guardians of the Galaxy, Captain Marvel, Thanos, Doctor Strange, Scarlet Witch
- Cover features matt lam, spot UV and foil
- Disney Plus has 87.6 million paid subscribers globally, with an additional 50.1 million paid subscribers for Disney Plus Hotstar. In the UK, Disney Plus has 7.5 million subscribers, which is up 21% from 2021.
- Features a foreword by Marvel comics writer Ryan North.

Marvel: The Science of Super Heroes

SPIDER-MAN: ALLIES

Spider-Man has teamed up with countless other heroes in the comic fighting career, but there are some that he counts as friends.

DAVEDEVIL
A character created by Stan Lee, Dave Devildar is the right-hand man of Doctor Doom. He is a powerful sorcerer and a master of the occult. He has the ability to control the minds of others and to create portals to other dimensions. He is a powerful ally of Doctor Doom and a formidable enemy of Spider-Man.

IN THE REAL WORLD
The character of Dave Devildar is a fictional character, but the concept of a powerful sorcerer is a real one. In the real world, there are many different types of magic, including black magic, white magic, and ceremonial magic. Each type of magic has its own unique history and traditions.

BLACK CAT
Felicia Hardy is a cat burglar and a skilled acrobat. She is a close friend of Spider-Man and has helped him on many occasions. She has the ability to climb walls and is a master of disguise. She is a powerful ally of Spider-Man and a formidable enemy of Doctor Doom.

IN THE REAL WORLD
The character of Felicia Hardy is a fictional character, but the concept of a cat burglar is a real one. In the real world, there are many different types of burglars, including cat burglars, who are known for their ability to climb walls and to enter homes without being detected.

SPIDER-WOMAN
Jessica Drew is a former member of the Skrull Empire. She has the ability to create webs and to fly. She is a powerful ally of Spider-Man and a formidable enemy of Doctor Doom.

IN THE REAL WORLD
The character of Jessica Drew is a fictional character, but the concept of a superhero is a real one. In the real world, there are many different types of superheroes, including those who have superpowers, those who have special skills, and those who have special equipment.

THE AVENGERS: CAPTAIN AMERICA

Several heroes have taken the mantle of Captain America, serving as a symbol of liberty and a beacon of freedom. Captain America is more than one person, he is a symbol of standing up for what is right. Steve Rogers started the legacy of Captain America during the darkest days of World War II, but other heroes have picked up the shield.

SAW WILSON'S WINGS
The original wings used by Steve Rogers were designed by Bob Fawcett and made of lightweight aluminum. They were used to transport Rogers to the front lines during World War II. The wings were made of a material called Duralumin, which is a type of aluminum alloy. The wings were made of a material called Duralumin, which is a type of aluminum alloy.

IN THE REAL WORLD
The character of Steve Rogers is a fictional character, but the concept of a superhero is a real one. In the real world, there are many different types of superheroes, including those who have superpowers, those who have special skills, and those who have special equipment.

THE WINTER SOLDIER'S SAM
James Buchanan "Bucky" Barnes was the best friend of Steve Rogers. He was a soldier in the United States Army during World War II. He was captured by the enemy and spent years in a Soviet prison. He was later rescued and became the Winter Soldier, a powerful ally of Captain America.

IN THE REAL WORLD
The character of Bucky Barnes is a fictional character, but the concept of a soldier is a real one. In the real world, there are many different types of soldiers, including those who serve in the United States Army, those who serve in the United States Navy, and those who serve in the United States Air Force.

CAPTAIN AMERICA'S SHIELD
Captain America's shield is a symbol of liberty and a beacon of freedom. It is made of a material called Vibranium, which is a fictional material. The shield is made of a material called Vibranium, which is a fictional material.

IN THE REAL WORLD
The character of Captain America's shield is a fictional character, but the concept of a shield is a real one. In the real world, there are many different types of shields, including those who are used for protection, those who are used for decoration, and those who are used for protection.

THE FANTASTIC FOUR: POWERS

The Fantastic Four get their powers when Reed Richards took the team on a mission into space where they were blasted by cosmic rays, changing them forever. They are a team of explorers, adventurers and heroes who have saved the world countless times.

NEED INCHES - MISTER FANTASTIC
Mister Fantastic is one of the four members of the Fantastic Four. He has the ability to stretch his body to any size. He is a powerful ally of the other members of the team and a formidable enemy of Doctor Doom.

IN THE REAL WORLD
The character of Mister Fantastic is a fictional character, but the concept of a superhero is a real one. In the real world, there are many different types of superheroes, including those who have superpowers, those who have special skills, and those who have special equipment.

COULD YOU STRETCH LIKE MISTER FANTASTIC?
The only way to stretch like Mister Fantastic is to have superpowers. In the real world, there are many different types of stretching exercises, including those that are used to improve flexibility, those that are used to improve strength, and those that are used to improve endurance.

SUE STORM: INVISIBLE WOMAN
Sue Storm is one of the four members of the Fantastic Four. She has the ability to become invisible. She is a powerful ally of the other members of the team and a formidable enemy of Doctor Doom.

IN THE REAL WORLD
The character of Sue Storm is a fictional character, but the concept of a superhero is a real one. In the real world, there are many different types of superheroes, including those who have superpowers, those who have special skills, and those who have special equipment.

COINIC RAYS
Cosmic rays are a type of radiation that comes from outer space. They are made up of high-energy particles, including protons, neutrons, and electrons. Cosmic rays can be harmful to living organisms, but they can also be used for medical purposes.

IN THE REAL WORLD
The concept of cosmic rays is a real one. In the real world, there are many different types of radiation, including those that are used for medical purposes, those that are used for power, and those that are used for research.

SPIDER-MAN

The science behind Spider-Man is very interesting. I like him, but I would definitely NOT have named myself after an arachnid. Also, that's not how I would've made those webs, but I like what he did there. It must be some type of polymer. Cool. I've met more than one spider-guy, but I'm not sure how many there are.

- HOW DID SPIDER-MAN GET HIS POWERS?
- WHERE DOES SPIDER-MAN GET HIS WEBS FROM?
- WHAT GADGETS DOES SPIDER-MAN HAVE?
- DO THE DIFFERENT SPIDER-MEN HAVE DIFFERENT POWERS?
- HOW DO DOCTOR OCTOPUSS ARMS WORK?
- CAN THE VULTURE REALLY FLY?

Disney Museum

Celebrate 100 years of Disney magic with this beautifully illustrated coffee table book!

- Sample contents: Walt's Early Years, Mickey and Friends, Spellbinding Classics, The Art of Animation, Long Live the King, TV Toons and More, Drawn by Hand, The Frozen Phenomenon, Disney Channel Smash Hits, Live-Action Adventures, Bringing Animation to Life, Reimagining the Classics, Disney Publishing, Disney Stores, Disneyland Park
- Features original imagery from the Disney Archives and Animation Research Library documenting the company's history
- Covers everything from the Golden Age of animation and original shorts to live action films and Disney+

LONG LIVE THE KING

In the last King (1939), a young boy gets a lion's mane, who goes on a journey of discovery when the queen of the island dies. According to the author, the character of the King was based on the lion's mane. The book is a celebration of the King's 80th anniversary. It features a collection of artwork, including a key to plate and a character design.

KEY TO PLATE

1. Main title page
2. Lion's mane and King's mane
3. King's mane

THE FROZEN PHENOMENON

In 2013, Disney Animation introduced the world to Anna and Elsa - the sisters of Arendelle. Elsa is the central character of the film, who is a powerful ice queen. The book is a celebration of the film's 10th anniversary. It features a collection of artwork, including a key to plate and a character design.

KEY TO PLATE

1. Main title page
2. Elsa and Anna
3. Elsa's ice powers

SWASHBUCKLING PIRATES

In 1950, a Disney adventure called *Captain Jack Sparrow* was released. The book is a celebration of the film's 70th anniversary. It features a collection of artwork, including a key to plate and a character design.

KEY TO PLATE

1. Main title page
2. Captain Jack Sparrow
3. The ship

BELOVED CHARACTERS

Literary classics provided strong source material for a number of Disney films. *Alice in Wonderland* (1951) is Disney's version of classic Lewis Carroll children's novel; *Alice's Adventures in Wonderland and Through the Looking Glass*, and *What Alice Found There*. The books had fascinated Walt Disney since childhood. In the 1920s, they had loosely inspired his part animated, part live-action *Alice Comedies* and since then he had bought the film rights to the novel. Disney concept artist and colour stylist Mary Blair created exuberant, fantastical production artwork that inspired the look of the film. Music and songs hold the film's sequences together and propel the story along - the film features more songs than any other Disney film at the time. One of the film's most extravagant scenes, the Mad Hatter's tea party, was initially filmed in live-action to provide an aid to animators. Vaudeville actor Ed Wynn played the Mad Hatter and Wynn's extemporized voice track was so inspired it was used for the final film.

In 1913, Walt had seen a touring production of J.M. Barrie's stage play *Peter Pan* and, inspired by its combination of fantasy and swashbuckling adventure, acquired the film rights in 1939. As with *Alice in Wonderland*, Mary Blair created the signature production art for the film. Live-action footage was shot for the animators' reference, with the voice actors performing their roles. Meanwhile, the magic of Disney animation made the characters fly - Peter Pan even engages dastardly Captain Hook in mid-air sword fights. Tinker Bell, often represented merely as a spotlight in stage versions, became a fully realized character using actor Margaret Kerry and others, in live-action model. Released in 1953, after nearly two decades of work and thousands of drawings, *Peter Pan* was an immediate success and has remained a beloved Disney classic.

Literary works have remained a source of inspiration. *The Sword in the Stone* (1963), a whimsical adaptation of T.H. White's novel about the Arthurian legends, was the first Disney animated feature film to include songs by the Sherman Brothers, who would later work on *Mary Poppins* (1964), *The Jungle Book* (1967) and many others. *The Rescuers* (1977), a tale of an international rescue organisation run by mice, was based on a book series by English author Margery Sharp. Cruella DeVil nearly became the main villain in the film, but in the end the animation team created the fiery tempered, diamond-obsessed pawn shop owner Madame Medusa. Some classic tales are updated in inventive new ways: *Treasure Planet* (2002) is a version of Robert Louis Stevenson's 1883 novel *Treasure Island* set in outer space!

KEY TO PLATE

1. Tea Party production art
2. Peter Pan and friends
3. Character designs

KEY TO PLATE

1. Main title page
2. Alice in Wonderland
3. The Mad Hatter's tea party

Disney Brain Games

100 exciting Disney puzzles to exercise young minds!

- Over 37,000 copies sold (as of August 2022)
- 100 puzzles across themes of word, logic, maths/number, memory and more
- Join your favourite Disney characters such as Moana, Anna and Elsa, Dory, Miguel, Belle, Aladdin, Mike and Sulley and many more as you complete the challenges.
- Features characters from across Disney and Pixar, including heroes, villains and Princesses!
- With varied and challenging puzzles with different levels of difficulty, there's enough puzzles to keep bright minds entertained.

Disney Brain Games

Puzzle 1
THE MISSING NOTE

Hector and Miguel share a passion for music, so they spend a lot of time singing and playing music together. They are rehearsing a song, but have encountered a problem – the song is missing the last note.

Find the path that connects the two singers, and discover which note is missing!

Cross off the notes in this list as you go:
C D E F G A B

The missing note is: _____

Puzzle 2
HERCULES AND THE HYDRA

Hercules is battling the terrible monster Hydra in the cave where it dwells. At the start of the battle, Hydra has only one head, but each time Hercules cuts a head off, three grow in its place. He has already cut off twelve heads.

How many heads does Hydra have now?

Heads in total: _____

Use the space if you need to work it out on paper.

Puzzle 3
I'M LATE, I'M LATE!

It's always "late" for the White Rabbit, and he's always checking his giant watch! Right now, it's 5:00 pm. The White Rabbit's next appointment is in 100 hours' time, but he is already worried about being late!

1. How many days is it until his appointment? _____

2. What time will it be at? _____

Use the space if you need to work it out on paper.

Puzzle 4
MEMORY SEQUENCE

During a test, Anger got into a fight with Fear, and that messed up Riley's memories. Luckily, Joy has a solution!

Start from memory 0 and plot the right path. Remember: each memory is equal to the sum of the two previous ones!

Use the space if you need to work it out on paper.

START

0

Disney Brain Games: Maths

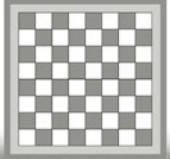

100 Disney-themed maths puzzles to exercise young minds!

- The first *Disney Brain Games* book has sold over 58,000 copies (as of August 2023)
- 100 fun and challenging maths-based puzzles
- Features a wide range of beloved Disney and Pixar characters, from Anna and Elsa to Woody and Buzz Lightyear.
- Varied and challenging puzzles with different levels of difficulty to keep bright minds entertained
- Supports KS2 Maths curriculum
- Disney+ has 157.8 million paid subscribers globally, and 7.14 million paid subscribers in the UK.

Disney Brain Games: Maths

Puzzle 28
EIGHT QUEENS

Mr. Gao has a chess puzzle for you to solve! In chess, the queen can move any number of spaces in a straight line – horizontally, vertically or diagonally. **Place eight queens on the chess board so that no queens is in the same line as any other queen. How many different ways can you find?**

Puzzle 29
ARCHERY PRACTICE

Merida's practicing her archery skills. To prove what a great archer she is, Merida must hit one number in the outer ring, one number in the inner ring and one number in the centre that add up to each of the three numbers below.

Can you figure out which three numbers she must hit to make each of the target scores?

Puzzle 39
MICKEY'S MAGICAL MIX UP!

The Sorcerer's Apprentice has accidentally jumbled all of his master's Plus and Minus potions over!

Can you put the pluses and minuses back in the right places so that these sums work forwards, backwards, up and down?

Puzzle 40
...AND THE KITCHEN SINK

Every time Arthur tries to clean one of Merlin's dirty dishes, the number of dirty dishes doubles. He started with one dirty dish. Arthur has tried to clean 10 dirty dishes. **How many dirty dishes are there now?**

Puzzle 49
SOLVE THE RIDDLE OF THE CAVE!

To enter the Cave of Wonders, Aladdin must find the missing numbers in this puzzle.

Each square needs to be filled with a number between 1 and 9, but you can use numbers more than once. The functions surrounded by stars are carried out first.

So:

$$2 \star 3 + 6 = 12$$

$$2 \times 3 \star 6 = 18$$

Puzzle 23
SHY COCONUTS

Some Kakamora have hidden themselves among Moana's coconut harvest. You can tell which coconuts are Kakamora in disguise, because the numbers they have stuck to them have made the questions they're hiding in incorrect.

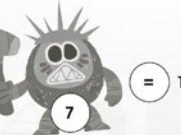

Make the sums correct by removing 1 digit from each question.

$$32 + 70 = 73$$

$$42 + 35 = 37$$

$$41 - 60 = 35$$

$$15 - 13 = 12$$

$$63 \div 7 = 19$$

Marvel Brain Games

100 exciting Marvel puzzles to exercise young minds!

- 100 puzzles across themes of word, logic, maths/number, memory and more.
- Join your favourite Marvel characters such as Ant-Man, Shuri, Captain America and many more as you complete the challenges.
- Features characters from across Marvel comics including heroes, villains and agents!
- With varied and challenging puzzles with different levels of difficulty, there's enough puzzles to keep bright minds entertained.
- Marvel has 4 of the 10 biggest movies of all time (*Avengers*, *Avengers Endgame*, *Avengers Infinity War*, *Spider-Man No Way Home*).

Marvel Brain Games

**PUZZLE 1
SPEED TEST**

Using the clues below, can you work out – in 30 seconds or less – the identities of these four comic characters?

- Red – Twin brother – Telekinetic
- Artificial Intelligence – Robot – Hank Pym
- Radiation – Web – Peter Parker
- Spy – S.H.I.E.L.D. – Black

**PUZZLE 2
ANT-MAZE**

To escape from prison, Scott Lang needs to activate his suit and reduce himself to the size of an ant. He still needs to find the way out of the maze though... can you help him plot a path to freedom?

**PUZZLE 3
WHO AM I?**

One of Black Panther's enourage has gone missing. Can you work out who it is from the letter clues below? We've filled in a few letters to get you started.

Can you work out who it is from the letter clues below?

The right letter in the right place looks like this: **O** The right letter in the wrong place looks like this: **R**

And if the letter is not in the word it looks like this: **A**

Grid of letters:

G	R	A	S	P
P	I	V	O	T
C	H	A	S	M
P	O	U	N	D
S	H	A	R	P

**PUZZLE 4
IN THE SHADOWS**

Only one of these shadows is an exact match for Captain America. But which one is it?

**PUZZLE 5
LAB WORK**

Bruce Banner is hard at work on a formula in the lab. Can you help him calculate the final formula by filling in all the blanks? The number in each circle must be the sum of the two numbers below.

Example:

```

    33
   / \
  17 16
 /   \
8     9   7
/ \   / \
5 3 6 1
    
```

Grid numbers and blanks:

```

      87
     / \
    .....
   /   \
  19     .....   22
 / \   / \
..... .....
/   \ /   \
2     6     .....   7     .....
    
```

**PUZZLE 6
BUILD A HERO!**

Can you pair the word parts below to create the names of five super heroes?

Word parts:

- VAL
- MAG
- SH
- CON
- GR
- NETO
- KYRIE
- FAL
- URI
- OOT

Star Wars Brain Games

PUZZLE 10 BINARY BAFFLER

Luke Skywalker needs to fix a battered old astromech. The binary start-up sequence is incomplete – can you help him fill in the blanks to get the droid working again?

You must place three '0's and three '1's into each row and column, but there cannot be more than two '0's or two '1's in sequence in any row or column.

			1	1
0		0	1	0
1	1		1	0
1	1			

PUZZLE 11 JAWA JUNK

The Jawas have found a new droid while scavenging on the desert planet Tatooine, but the identification panels have been mixed up. Each set of four panels has been rearranged – but not rotated. Can you work out what two-character identification code was originally displayed on the panels?

PUZZLE 43 MIND CONNECTION

Qui-Gon will help you learn to see with the Force, by changing 'MIND' into 'SEES' in just four steps. At each step you should change just one letter to make a new word, without rearranging any of the letters. For example, you could start by changing MIND to MINE (though that will lead you down the wrong path.)

PUZZLE 44 TIE FIGHTER SHOOT OUT

Rey and Finn are being shot at by TIE fighters and must find their way to a vehicle to escape. Answer the sums and follow the correct answers to find out which vehicle they steal.

PUZZLE 75 FOLLOW THE PATH

Using the letters in order from the word EMPIRE, follow the correct path to find your way through the maze.

PUZZLE 76 TANGLED WIRES

The door controls have been destroyed! Connect the right wires so the Mandalorian, Din Djarin, and Grogu can escape! But be warned – the door is guarded by a noisy gatekeeper droid. Avoid it at all costs!

Look at the tangle of cables and figure out which button to push to open the door and which turns off the lights.

PUZZLE 9 SHADOW MATCH

The galaxy is full of heroes and villains, including the daring Resistance pilot Poe Dameron and scavenger-turned-fugitive Rey. Match the character's shadows to their names.

1. Rey
2. Stormtrooper
3. Poe Dameron
4. BB-8
5. Captain Phasma
6. Chewbacca
7. Kylo Ren
8. Finn

A New Hope (Star Wars Cinematic Classics)

CINEMATIC CLASSICS

C-3PO wandered away, complaining bitterly. He passed the giant skeleton of a knight dragon that lay bleached on the sand. Then he spotted something on the distance.

"A transport," he said excitedly, waving his metal arms in the air. "I've saved! Over here, they may 'Please help!"

Meanwhile, R2-D2 had reached the dark hills. The little astromech whirled softly as he trundled through a stormy rain. Luke still believed that he was being watched. Behind the rocks, hooded creatures known as Jawas whispered to one another. Their yellow eyes glowed as the droid passed by.

Then one of the Jawas sprang up in front of Artoo and fired an ion blaster. The blue energy bolt struck the droid, knocking him off his feet.

Concept art of C-3PO and R2-D2 on the planet of Tatooine after landing on the escape pod. **Ralph McQuarrie**

- 14 -

EPISODE IV: A NEW HOPE

The Jawa gestured eagerly. "Ubini!" he cried, and the others crowded round, lifting Artoo. They carried him through the rain to their gigantic sandcrawler, where they fitted the little droid with a restraining bolt to prevent him from escaping. Then a large air-pipe stalked down from the sandcrawler and sucked Artoo inside.

Artoo was dumped into a large chamber filled with strange droids. They came in all shapes and sizes, from boxy power droids also known as gaud droids, to machines built for moisture farming, mining and security. There a pair of glowing eyes spotted Artoo.

"That's no moon," Obi-Wan told him. "It's a space station. I Han Solo tried to turn the Falcon around, but it was too late. They were caught in an invisible tractor beam, pulling them deadily closer to the Death Star.

"Destroyed," he told the others. "By the Empire."

Luke couldn't believe that such a thing was possible, but there was no time to discuss it. A ship had appeared on their scopes: a small Imperial TIE fighter. It blasted the Falcon, then it strafed away.

"It's heading for that small moon," Luke pointed.

"That's no moon," Obi-Wan told him. "It's a space station. I Han Solo tried to turn the Falcon around, but it was too late. They were caught in an invisible tractor beam, pulling them deadily closer to the Death Star.

"Send a scanning crew aboard," Vader ordered. I want every part of this

Concept art for the Death Star showing the docking bay where the Falcon has landed. **Ralph McQuarrie**

- 18 -

CINEMATIC CLASSICS

Obi-Wan Kenobi slipped through the corridors of the Death Star, drawing closer to the Millennium Falcon. But before he could reach it, he came face to face with an old acquaintance. Darth Vader stood blocking his path, a red lightsaber humming in his hand.

"I've been waiting for you, Obi-Wan," the Dark Lord boomed. "We meet again at last. The circle is now complete. When I left you, I was but the learner. Now I am the master."

Obi-Wan moved swiftly, countering blow after blow. "You can't win, Darth," he said in former apprentice. "If you strike me down, I will become more powerful than you can possibly imagine."

"You should not have come back," Vader replied, lunging at Obi-Wan, but the old Jedi was too quick.

Spotting the duel from across the hangar, the stormtroopers guarding the Millennium Falcon peeled away, turning to the aid of their quarters.

Luke, Leia, Han and Chewie had made it back to the hangar, where Artoo and Threepio joined them. With the guards distracted, they ran for the Falcon. But as he neared the garage, Luke saw his mentor locked in combat with the monstrous Darth Vader.

Concept image for Obi-Wan Kenobi. **Ralph McQuarrie**

- 48 -

CINEMATIC CLASSICS

In the Death Star's control room, an aide approached Grand Moff Tarkin, offering to ready his ship in case the Rebels were successful. "Evacuate?" Tarkin asked disbelievingly. "In our moment of triumph? I think you overestimate their chances." He was sure that this ragtag army posed no threat to his battle station.

Meanwhile, Red Leader had guided another group of fighters into the trench. Vader was right behind them, taking out first one, then two of Red Leader's wingmen. But the Dark Lord was too late. Red Leader was in

Concept art for the Death Star trench run. **Ralph McQuarrie**

- 58 -

EPISODE IV: A NEW HOPE

range. He fired, and his torpedoes streaked towards the target.

The shot was no good. The torpedoes missed, exploding on the surface of the Death Star. And as Red Leader turned to flee, Darth Vader's TIE fighter swooped in. Red Leader's X-wing slammed into the battle station and burst into flame.

Luke saw the ship explode and knew that time was running out. Flanked by Biggs and Wedge, he flew at full speed into the trench. But Darth Vader's fighter was right behind them and closing fast.

The Dark Lord fired, scoring a hit on Wedge's engine. "I'm hit!" Wedge cried, peeling off. Vader ignored him, keeping his focus on Luke and Biggs. They swooped from side to side, trying desperately to evade the Dark Lord's fire.

It was no good. Biggs's ship was hit, and Luke watched as his best friend's ship exploded into shards of flame. There was no time to grieve. He knew that he was the Rebels' last hope for victory.

Luke switched on his targeting computer and prepared to fire his torpedoes. As he struggled to lock on to the target, Ben Kenobi's ghostly voice spoke to him once more. "Use the Force, Luke," the old Jedi told him. "Let go. Luke, trust me."

Luke deactivated his computer. He was determined to trust his instincts.

- Test yourself against three levels of complexity, from Padawan to Jedi Knight to Jedi Master
- A perfect gift for adult *Star Wars* fans who have enjoyed titles such as *Murdle*

Star Wars: Jedi Mind Training

PUZZLE 03 PADAWAN

UNEQUAL

Inequality, greater, and lesser are concepts that are all too often encountered in the universe. They are of interest for the Jedi, who do not deal in absolutes and who strive for knowledge over ignorance. Bigger is not always better; smaller is not always weaker.

The number square must be fully completed so that each number appears once only in each row and column. In addition, each greater than (>) or smaller than (<) symbol must be correct.

PUZZLE 03 PADAWAN

LOGICAL DEDUCTION

Han Solo's blaster pistol has been stolen in the Mos Eisley Cantina, and you have to work out who did it. There are three suspects.

There are five clues:

- Greedo trusted the suspect who used a lightsaber.
- Dr Cornelius Evazan was holding a Moo horn when you saw him.
- A glass of Blue Milk was not found in the booth.
- Luke was spotted hiding under the bar.
- The blaster was eventually found in the bandstand.

Use the clues to fill in the grid opposite and log what you know, then use logical deduction to work out what you don't!

Each suspect was found holding another item. And there are three places the theft could have happened:

PUZZLE 03 PADAWAN

BALANCE: DARK SIDE/LIGHT SIDE

For there to be peace, there should be balance. A Jedi will seek balance in everyday life, and will learn to concentrate and feel their way as different elements seek to dominate; order must be restored, balance must prevail.

In this puzzle, each row and column must contain the same number of dark side tiles and light side tiles, but care must be taken, for neither may have more than two next to each other, vertically or horizontally. No row may be identical in sequence to any other row; the same rule applies to columns, which must also all be unique.

PUZZLE 04 PADAWAN

PATTERN RECOGNITION

Allow your inner calm to enhance your focus and clarity of thought. First look at the pattern, looking for intricacies, repetitions, and any variations that may be apparent. Now think of the flow, noticing how one colour becomes another. Let your intuition guide you.

Which of the blocks a, b, c, d, e, f completes the sequence in line 3?
