Discover 12 upheavals which changed the world forever.

- A thought-provoking exploration of the idea of revolution: how upheavals, ideas and technology have irreversibly changed the world.
- Content split into three distinct chapters: power struggles, social revolutions and new technology. Chapter openers discuss what the word “revolution” means in each of these contexts, while showing how the idea is linked across all areas.
- Written by long-time author and history enthusiast Joan Lennon, who is a Royal Literary Fund Fellow at Dundee University and regular contributor on The History Girls blog. Her previous non-fiction book *Talking History* was shortlisted for the SLA Information Book Award 2023 and longlisted for the UKLA Book Awards 2023 in the Information Books category.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Ice Cream 14
"Creamy from dessert"

Bicycle 15
"Freedom on two wheels"

Camera 24
"Click cheese"

High-Speed Train 25
"At-speed worldwide"

Wind Turbine 34
"Harnessing the power of wind"

Helicopter 35
"A whirling way to fly"

Easy Ice Cream
This is a simple recipe for making ice cream at home. It involves mixing cream, sugar, and vanilla, then churning it in an ice cream maker. The recipe is easy to follow and suitable for children.

Perilous Penny-Farthing
The penny-farthing was a type of bicycle that was popular in the late 19th century. It had a large front wheel and a much smaller rear wheel. It was called 'perilous' because it was difficult to ride and could be dangerous.

Developed to Perfection
This section discusses the evolution of the camera from its early days to modern digital cameras. It covers the invention of photography and how cameras have become more sophisticated over time.

Marvelous Maglevs
Maglev trains are a type of train that uses magnetic levitation to travel. They are called 'maglevs' and are known for being very fast and smooth. This section explains how they work and their benefits.

Green Energy
This section focuses on wind energy and how wind turbines generate electricity. It discusses the benefits of renewable energy and how wind power is becoming a more significant part of our energy supply.

Versatile VTOLs
Vertical Take-Off and Landing (VTOL) aircraft are a type of plane that can take off and land vertically. They are called 'VTOLs' and are used for various purposes, including military and civilian transport.

Wheel 17
"The revolutionary design that makes the world go round"

Internet 18
"The world at your fingertips"

Potter's Wheel
The potter's wheel is a tool used by potters to shape clay into pots and other vessels. It has been used for thousands of years and is still a common tool in pottery-making today.

World Wide Web
The World Wide Web (WWW) is a system of interlinked hypertext documents that can be accessed via the Internet. It is the foundation of the modern digital age and has revolutionized the way we communicate and access information.

- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

RICH AND POOR

THE HISTORY OF WEALTH

Wealth is the difference in wealth between the richest and the poorest. It has been around since the first humans lived. In the early days, wealth was measured in terms of land and livestock. As time went on, it became more complex, including money, property, and even knowledge.

WEALTH CONCENTRATION

One of the biggest reasons for inequality is the way that wealth tends to get concentrated in the hands of a few. This has been true throughout history. In the early days, it was the landowners who were the richest. As time went on, it became the merchants and the bankers.

CAUSES OF INEQUALITY

There are many reasons for wealth inequality. Some people have more talent than others. Some people have more opportunities than others. Some people have more connections than others. All of these things can lead to wealth inequality.

WHAT'S WRONG WITH WEALTH INEQUALITY?

When a small number of people have most of the wealth, it can be a problem. It can lead to social inequality and even to conflict. It can also lead to economic problems, such as the 2008 financial crisis.

GOLDEN YEARS

AN INTERNATIONAL SYSTEM

In the 1920s, the gold standard was a system where the value of a country's currency was linked to the amount of gold it held. This was a way of ensuring that currencies were stable and that trade was easy.

THE COST OF WAR

After World War I, the gold standard was abandoned. This was because the war had caused so much damage to the world's economies that it was no longer possible to maintain the gold standard.

THE GOLD DUCK

In 1933, the US President Franklin D. Roosevelt ordered the gold standard to be abandoned. This was a move to help the US economy recover from the Great Depression.

FROM COUNTERFEIT COINS TO FALSE NOTES

ALVES dos REIS
MASTER COUNTERFEITER

Alves dos Reis was a famous Portuguese master counterfeiter. He was known for his ability to create fake banknotes that were almost indistinguishable from the real ones.

FIRST COUNTERFEITS

The first counterfeit banknotes were created in the 17th century. They were made by hand and were often of poor quality. However, as time went on, the quality of counterfeit banknotes improved.

THE BANK OF PORTUGAL

The Bank of Portugal was the first bank in Portugal. It was founded in 1763 and was the first bank to issue banknotes in the country.

FINANCIAL MARKETS

At regular markets people buy and sell things like food and clothing. At financial markets, people trade money-related assets. These include stocks and bonds.

STOCKS are shares in a company that the company sells to raise capital. Shareholders are paid dividends (regular sums paid out of the company's profits). Bonds are certificates issued by a government or corporation, promising to repay borrowed money at a fixed rate of interest. Financial markets can be physical places, like the New York Stock Exchange, or they can take place online.

THE FIRST BONDS

In the twelfth century, the government of Venice came up with a new way of raising money to fight a war. It offered its citizens certificates, known as prestii, in exchange for a loan, promising to pay them back by a certain time, plus 5 per cent interest. These were the first government bonds.

THE FIRST STOCKS

Founded in 1602, the Dutch East India Company was the first company to sell shares to the public. The money it raised from this funded its voyages to the East Indies, and it paid its shareholders out of the profits from its trade in enslaved people and spices. The shares were traded in the Amsterdam Stock Exchange, also established that year.

THE DAILY NEWS

OCTOBER 1929 NEW YORK CITY

THE WALL STREET CRASH

FINANCIAL MARKETS CAN BE VOLATILE. A RUMOUR OR A MINOR PIECE OF ECONOMIC NEWS CAN CAUSE BIG SWINGS IN PRICES. THE DESIRE TO MAKE MONEY OR AVOID LOSING IT IS A POWERFUL ONE, AND A

HERD INSTINCT CAN SOMETIMES TAKE OVER WITH PEOPLE STAMPEDING TO BUY OR SELL. THE MOST SPECTACULAR EXAMPLE OF THIS WAS THE WALL STREET CRASH OF 1929.

THE ROARING TWENTIES

The 1920s was boom time in the United States. There was a spirit of optimism in the country and it became fashionable to play the stock market. Share prices soon rocketed to a point where they represented a value far greater than the total worth of their companies' assets. This was now a mania – a period when everyone, from wealthy financiers to common investors, lost touch with reality and seemed to believe that prices could keep rising forever.

AFTER EFFECTS

As a result of the crash, businesses were bankrupted, banks closed, millions lost their jobs and the world plunged into a deep and lasting economic depression. This had a big political impact. In Europe, extreme right-wing parties exploited the misery of mass unemployment, blaming 'foreigners' such as Jews. Germany's Nazi Party rose to power in 1933. The consequences for the world would be devastating.

DISASTER

The crash occurred at the end of October 1929, during three calamitous days of trading at the New York Stock Exchange on Wall Street, when huge numbers of people decided collectively it was time to sell. With so many sellers, there were few buyers, and share prices plummeted. In those three days, billions of dollars were wiped off the value of American companies. And over the following years the market kept on falling. By 1932, stocks had lost nearly 90 per cent of their pre-crash value.

BEAUTIFUL

A Celebration of Evolution

All of nature is beautiful. This stunning book shows how a variety of amazing creatures have evolved to look and behave the way they do.

- Stunning watercolour artwork by the phenomenally talented natural history artist William Spring.
- Large format with 100% foil cover treatments makes this the ideal gift book.
- A poignant message with significance for today's world.
- Includes 50 beautiful creatures to marvel at.
- The perfect book for fans of *Hidden Planet* by Ben Rothery and *The Golden Mole* by Katherine Rundell.

Aldabra Giant Tortoise

It was the tortoise from Aesop's famous fable The Hare and the Tortoise who gave us the phrase 'slow and steady wins the race' (it couldn't be true for this animal, especially when put into context). Tortoises have been gently plodding around the planet for 300 million years.

The genetic structure of the vine of the long-necked plantain, the *Urtica dioica* L., is a highly variable system, as has been shown by 100 microsatellite loci. This variability is due to the fact that the vine is a perennial plant, which can live for many years and produce many offspring. The vine is a highly variable system, as has been shown by 100 microsatellite loci. This variability is due to the fact that the vine is a perennial plant, which can live for many years and produce many offspring. The vine is a highly variable system, as has been shown by 100 microsatellite loci. This variability is due to the fact that the vine is a perennial plant, which can live for many years and produce many offspring.

Pygmy Seahorse

As its name suggests, the pygmy warhorse is very tiny indeed, typically measuring just a centimetre or two in length.

The Barghini's puppy *ambrosia* has evolved to be so wonderfully well camouflaged that a woman's discovered and late 1900s. It was only spotted when a scientist who was studying a piece of coral found the tiny animal clinging to it to a branch. Today, there are now known species of puppy *ambrosia*, most of which live in the Coral Triangle of Southeast Asia. In 2008, the *Myxosquilla japonica* (also known as the "Japan pig") was discovered on the coast of Japan. More recently, in 2010, *Myxosquilla nana*, also known as the African puppy *ambrosia*, was discovered in South Africa.

[illegible]

Sperm Whale

The whale has been the stuff of myth and legend for as long as humans have ventured across the world's oceans. Looking at the sperm whale, it's easy to see why.

The sperm whale is truly awe-inspiring. It is one the largest animal predators in the world, measures around 35 metres in size in length, and weighs around 40 tonnes wet. Some have been recorded as being much larger, but these great whales are very rare. The sperm whale has several unique adaptations that make it not just a whale, but a whale species.

[illegible]

There are fuel-filled structures beneath a whale's skin that produce energy that are not used for the whale when it comes into contact with other animals. The energy was sometimes stored in the seal. One member of the whaling ship *Essex*, who captured the animal, wrote that the animal "blew" like a second *Motor-Dick*.

For a long period of time, spermatozoa, a highly flammable substance, were used to fuel lamps. The burning of this oil led to the heating of sperm whales in large numbers, causing many populations to become extinct. In the late 1970s, sperm whaling was stopped in the late 1970s. Unfortunately, some reactions continue to argue in this position. Whales are also threatened by climate change and pollution, as well as becoming entangled in commercial fishing nets.

Bat-Eared Fox

The name explains it all: a fox with ears like a bat. But why has this extraordinary animal developed such unusual features?

Living in small, tightly knit social groups, these foxes make their home on the savannahs of eastern and southern Africa. This is a dry and hot landscape where food is limited and danger is ever-present. The fox's large ears are an adaptation shared by many other inhabitants of these kinds of environments, such as the fennec fox, showing how evolution works to find the most efficient 'solution' to the problem of survival (bearing in mind that nothing is ever 'finished' in evolution – it's a constant work in progress).

In the case of a fox, its specialized ears serve several purposes. Firstly, they give it an astonishing sense of hearing. Not only does this allow the fox to detect predators and keep itself safe, but it also helps it to be a predator itself. It consumes a wide range of prey, including mice, spiders and millipedes, and occasionally even small reptiles and mammals – all of which are elusive, fast and, more often than not, actually hidden, as in the hole or shelter underground. In such situations, the ability to hear your dinner before you see it makes it a lot easier to locate. Bat-eared foxes can often be seen walking slowly with their noses to the ground (their sense of smell is also extremely sensitive), their huge ears cocked forward, listening for the tiny scratch of an insect in its burrow. Once the fox has located its prey, it swiftly digs it up and can seize its target. Specialized teeth make it easy to crunch through the (often thick) carcase of its insect lunch.

The ears also serve another vital function, one that's particularly important if you live in a hot environment and you're covered in fur: heat regulation. Like those of the elephant (see page 48), the fox's ears serve as radiators. Because of the fine capillary veins close to the surface of its ears, the fox can remain at a comfortable temperature by venting excess heat from its blood into the air.

Apart from its large ears, the bat-eared fox also has more teeth than other species of fox (between 44 and 50 teeth in total). In fact, these unique creatures have more teeth than most mammals. Bat-eared fox has three upper and four lower molars on each side of the mouth, while other members of the canid (or dog) family have two upper and three lower molars. These extra teeth mean that the fox is perfectly adapted to chewing creepy crawlies.

Although occasionally hunted, the bat-eared fox is one of the increasingly rare examples of an animal with a safe conservation status. It is helpful in keeping down the number of termites, which are considered pests. This means that the biggest commercial value for humans comes from keeping these foxes alive. Most threats to this fox come from the dangers its food sources might face, such as flooding from damming or the use of insecticides.

- Continue the series with 20 other Spectacular Visual Guides titles available.

[illegible][illegible]

Old-time towns like a veritable cornucopia, offering a wide range of goods and services, including the few hotels (usually in which official or nobles' quarters) that were the only places where a traveler could find a place to sleep. The towns were also centers of commerce, where the merchants of the region gathered to do business. The towns were also centers of culture, where the people of the region gathered to enjoy the arts and sciences. The towns were also centers of religion, where the people of the region gathered to worship and to be educated. The towns were also centers of industry, where the people of the region gathered to work and to be trained. The towns were also centers of government, where the people of the region gathered to discuss and to decide upon the laws and policies of the state. The towns were also centers of education, where the people of the region gathered to learn and to be taught. The towns were also centers of entertainment, where the people of the region gathered to enjoy the games and the sports of the day. The towns were also centers of social life, where the people of the region gathered to meet and to converse. The towns were also centers of family life, where the people of the region gathered to live and to be loved. The towns were also centers of community life, where the people of the region gathered to work and to play together. The towns were also centers of human life, where the people of the region gathered to live and to be human.

Water was precious so rainwater was collected from the roofs of buildings in tanks like this (above). As well as providing water for washing and cooking, the sides of the stone tank could be used to sharpen knives and swords.

A fort for a cohort of around 800 soldiers would have had six barrack blocks, each containing the living-space for a century of 80 men. Plans that have been discovered show that barrack blocks were long and narrow, with the living quarters for the centurion in command at one end. In some parts of the Empire, barracks for the troops had two storeys. The barracks had foundations of stone and the upper parts had a framework of wood, filled in with rubble and plastered over. The building would have been roofed in tiles, stone slates, or wooden shingles, depending on what materials were available locally.

The centurion had a suite of rooms to himself, including a separate bedroom and living room. Parts of his quarters may have been used as offices or storerooms.

Auxiliary soldiers' quarters

The centurion had a suite of rooms to himself, including a separate bedroom and living room. Parts of his quarters may have been used as offices or storerooms.

There were several different patterns of helmets, but they normally protected against sword cuts, not the pike and the spear.

Centurion's quarters

Over the years, chain mail might have been worn to protect the lower arms and body. This could not be as far as the breast and was heavy!

Troops wore leather sandals on their feet, but their soles were reinforced with iron studs. In cooler climates, soldiers wore sturdy wooden clogs.
