

Kolibri Kiado

Up in the Canopy

Explore the jungle layer by layer with a huge fold-out surprise at the end.

- James Aldred's book *The Goshawk Summer* won the 2022 James Cropper Wainwright Prize for Nature Writing.
- Written from the perspective of real-life Emmy-nominated cameraman and explorer, James Aldred
- Stunningly illustrated - with artwork as rich and dense as the rainforest itself
- Huge fold-out tree at the back of the book, which readers can pore over.
- Matt lam, fluoro pantone and spot UV finishes.

Talking History

150 years of world-changing speeches

- An accessible look at political and social history, and issues that remain pertinent today
- Contemporary design and illustrations from André Ducci accompany engaging text
- Authors are experienced children's writers and academics with expert knowledge on the topics discussed. In 2021, Joan Haig was selected as one of prestigious Scottish Book Trust's authors in residence, working with a school in Aberdeen
- Sample contents: Abraham Lincoln, 'The Gettysburg Address', 1863; Jawaharlal Nehru, 'A Tryst with Destiny', 1947; Nelson Mandela, 'Speech from the Dock', 1964; Harvey Milk, 'The Hope Speech', 1978; Angela Merkel, 'Address to 68th Session of the WHO', 2015 and Severn Cullis-Suzuki, 'Listen to the Children', 1992,

Talking History

In 1903, in the city of Manchester, UK, Emmeline Pankhurst and her eldest daughter Christabel founded the Women's Social and Political Union (WSPU). The organisation campaigned fearlessly for women's right to vote.

THE SUFFRAGETTE MOVEMENT

This wasn't the first time that women in Britain had fought for the vote. Since the mid-nineteenth century, female campaigners called 'suffragists' had tried to win rights for women in society through peaceful petitions and, later on, by refusing to pay their taxes.

But this campaign was slow with few results. After years of unsuccessful peaceful protest by the suffragists, the WSPU decided that it was time for action - 'Deeds Not Words', as their motto said. Members of the WSPU took part in 'civil disobedience' to literally fight for their cause. They chained themselves to railings, hacked politicians' names on public buildings, and smashed windows in public places, constantly clashing with the authorities.

They were so determined to achieve their political aims that they deliberately took part in violence and vandalism to influence the public and the government.

Newspapers began referring to militant WSPU campaigners as 'suffragettes'. By 1910, the WSPU had branches all over the country.

THE CAT AND MOUSE ACT

Around 1,000 suffragettes were imprisoned for their 'substance' behaviour. While in jail, some continued to fight by going on hunger strikes, refusing to eat or drink. At first, they were released to prevent them from starving, but, by 1910, prison wardens began to force-feed them. Women were badly hurt, prompting public outrage at what was seen as government torture.

The government responded by passing the 1913 'Prisoners' (Temporary Discharge for Ill Health) Act. Under this new law, when women on hunger strike became critically weak, they were sent home. As soon as they recovered, they were promptly returned to continue their sentence. It was dubbed the 'Cat and Mouse Act' because of the way a cat plays with its prey repeatedly letting it escape before catching it again.

Emmeline Pankhurst was imprisoned and released 16 times! It was in 1913, in between prison sentences, that she visited the United States to campaign for support and funding. She addressed a group of women at the Parsons Theatre in Hartford, Connecticut, in a powerful speech attempting to justify the use of militant tactics in the fight for women's rights.

Art of Protest

Discover the power of words, images and much more in this analytical and thought-provoking look at protest art.

- Stunning artwork by contemporary artists around the world
- As told by TED talker, activist, lecturer and artist De Nichols
- De's *Mirror Casket* project was commended by legendary activist Angela Davis in Smithsonian Magazine.
- **WINNER OF THE BRITISH BOOK DESIGN & PRODUCTION AWARDS IN THE CHILDREN'S TRADE 9 TO 16 CATEGORY!**
- **WINNER OF THE 2023 BOLOGNA RAGAZZI AWARD!**
- Uncoated and fluoro pantone cover treatments with flaps.

Art of Protest

Protest art often makes use of symbols, which can quickly convey powerful meaning.

SYMBOLISM

Paper Cranes
In Japan, it is believed that someone who folds 1,000 origami cranes will be granted a wish. In 1945, two-year-old Sadako Sasaki was in the vicinity of the atomic bomb dropped on Hiroshima. She suffered long-term effects from that exposure, including developing leukaemia. Before she died at the age of 12, Sadako folded more than 1,000 cranes, and the paper crane went on to become a symbol of peace.

The Peace Sign
The peace sign was created by the British artist Gerald Holtom in 1958 as the logo for a campaign for nuclear disarmament in the UK. It has since become an iconic symbol of calls for peace.

Umbrellas
During protests for democracy in Hong Kong in 2014, activists used umbrellas as shields against tear gas and other aggressions by the police. The umbrellas came to symbolize the protests and gave the movement its name (read more on pages 52-53).

The Clenched Fist
The image of an upraised clenched fist is a powerful symbol of protest and resistance. Some of its first uses were by labour unions in the early 1900s, before it grew in popularity and became a symbol of many causes, including Black Power, the anti-apartheid movement and the feminist movement.

The Rainbow
The rainbow is the most iconic symbol of the LGBTQ+ movement. It represents diversity, acceptance and the spectrum of human sexualities and genders.

Celebrate the achievements made in medical engineering and take a glimpse into the future.

- Sample contents: The First Prosthetics, Jack E. Steele - Father of Bionics, Arne Larsson - The First Pacemaker Patient, How Cochlear Implants Work, Eye Replacements, Keith Hayman - The First Bionic Eye, How Bionic Limbs Work, Campbell Aird - The First Prosthetic Arm, Exoskeletons, Neural Implants, The Paralympics, Neil Harbisson - The First Cyborg, Ethics
- Phenomenal artwork by highly acclaimed artist Samuel Rodriguez
- As told by UK Sepsis Ambassador Patrick TJ Kane
- The first of its kind - a book that celebrates the history of medical implantables and prosthetics

This visually extraordinary book presents the history of medicine as it has never been seen before.

- Sample contents: The History of Medicine, Learning from the Past, Ancient Beliefs, Mental Health, How Medicines Work, Opening Up the Body, The Power of Plants, Malaria Medicines, Making Medicines, Poisons, Hospitals Through History, Early Surgery, Cholera, Plagues and Pandemics, Vaccination, D.I.Y. Medicine, Transplants, Prosthetics
- Expertly written by curator, lecturer and historian, Briony Hudson
- Striking artwork from Aquila artist Nick Taylor is sure to make this title stand out from the crowd
- Perfect for students but also the ideal gift book for general interest readers

This visually extraordinary book presents the history of money as it has never been seen before - from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

DIFFERENT KINDS OF MONEY

Money serves because it is traded, but this trade doesn't come out of nowhere. It has to be based on something. There are several reasons why money might be traded. Some money is traded because it is made of something valuable, such as gold or silver. This is called commodity money. Another kind is traded because it represents something valuable. This is called representative money. A third kind is traded simply because a government tells it is valuable. This is called fiat money.

COMMODITY MONEY

The earliest form of commodity money was cowrie shells. They were small, round, and easy to carry. They were used in many parts of the world, including the Indian Ocean and the Mediterranean. Commodity money is made from things that have value on their own. It can be used to buy things, and it can be traded for other things. Commodity money is often used in places where there is no government, or where the government is weak. It is also used in places where the government is not trusted.

REPRESENTATIVE MONEY

The earliest form of representative money was gold coins. They were made of gold and had a picture of a king or a queen on them. They were used in many parts of the world, including Europe and the Middle East. Representative money is made from things that represent something valuable. It can be used to buy things, and it can be traded for other things. Representative money is often used in places where there is a government, and where the government is trusted.

FIAT MONEY

The earliest form of fiat money was paper money. It was made of paper and had a picture of a king or a queen on it. It was used in many parts of the world, including Europe and the Middle East. Fiat money is made from things that have no value on their own. It is only valuable because a government tells it is. Fiat money is often used in places where there is a government, and where the government is trusted.

A WORLD WITHOUT MONEY

To understand why money is useful, let's try to imagine a world without money. In such a world, the only way to get hold of the things you need would be to make or grow them, or steal them from other people. These people are called barter. Barter is the exchange of goods or services for other goods or services without using money.

BARTER AND GIFTS

Barter is the exchange of goods or services for other goods or services without using money. It is often used in places where there is no money, or where the money is not trusted. Barter is often used in places where there is a community, and where the community is small. Barter is often used in places where there is a community, and where the community is small.

THE PROBLEMS WITH BARTER

There are several problems with barter. One problem is that it is difficult to find someone who has what you need and who wants what you have. Another problem is that it is difficult to measure the value of things. A third problem is that it is difficult to store things. Barter is often used in places where there is a community, and where the community is small.

COMING OF MONIES

Money is a way to solve the problems of barter. It is a way to measure the value of things, and it is a way to store things. Money is often used in places where there is a community, and where the community is large.

WHAT MAKES A GOOD FORM OF MONEY?

The earliest forms of money were very different to the money we use today. There was no paper or printing process or machines to make money. People had to make it with their hands. They used things like cowrie shells, gold, and silver. These things were valuable because they were hard to come by, and they were easy to carry.

CONVEYABLE

Money should be easy to carry and easy to use. It should be small and light, and it should be easy to count. Money should be made of something that is hard to come by, and it should be easy to store.

STABLE

Money should be stable in value. It should not change in value over time. Money should be made of something that is not easily damaged, and it should be easy to store.

UNIFORM

Money should be uniform in size and shape. It should be easy to count, and it should be easy to use. Money should be made of something that is easy to count, and it should be easy to use.

ACCEPTED

Money should be accepted by everyone. It should be easy to use, and it should be easy to store. Money should be made of something that is easy to use, and it should be easy to store.

QUIRKY CURRENCIES

Many unusual objects were used as money in the era before notes and coins. These included foodstuffs such as barley, rice, corn and wheat. The Chinese used tea bricks to pay for things, whereas the Aztecs used cacao beans, and the peoples of ancient Africa and the Middle East measured value in coffee beans. The Mesopotamians kept sacks of grain in protected barns, much like the banks of today. When stored carefully, these foods could provide a reasonable store of value. But a storm or a bad harvest could wipe out your wealth.

MONEY YOU CAN EAT

Some surprising foods have been used as units of exchange in different parts of the world. Here are some of them.

BUTTER

The Pilgrims of North America used butter as a form of money. They used it to buy things, and they used it to pay for things. Butter was a valuable commodity, and it was easy to carry.

CHEESE

In the early 1800s, cheese was used as a form of money in some parts of Europe. It was a valuable commodity, and it was easy to carry. Cheese was often used to pay for things, and it was often used to buy things.

EELS

Dried and smoked eels were used as a form of money in some parts of Europe. They were a valuable commodity, and they were easy to carry. Eels were often used to pay for things, and they were often used to buy things.

COCONUTS

For the Kusa Yaku, who live on islands off the coast of Papua New Guinea, coconuts were used as a form of money. They were a valuable commodity, and they were easy to carry. Coconuts were often used to pay for things, and they were often used to buy things.

EGGS

When Venetians were sailing from the island of Zante to the island of Corfu, they used eggs as a form of money. They were a valuable commodity, and they were easy to carry. Eggs were often used to pay for things, and they were often used to buy things.

POTATO MASHERS

In ancient Cameroon, potato mashers were used as a currency. These heavy iron objects, called ensusbas, were shaped like a club.

KISSI PENNIES

The kissi penny was a currency used mainly in West Africa in the first half of the twentieth century. They were long iron rods, usually arranged in bundles of twenty. A cow could be bought for 30 or 40 bundles.

IRON SNAKES

The Lobi tribe of Burkina Faso used iron snakes as a currency. They would also attach them to their calves as a protection from snake bites and lightning.

KNIVES

Large bronze knives circulated as currency in ancient China between 600 and 200 BCE. According to one story, this started when a prince who was running low on money to pay his troops allowed them to use their knives to pay for goods in the local village.

RAI STONES

The small Pacific island of Yap possesses the world's biggest money. Rai stones are huge discs of rock weighing up to 8 tonnes each. The stones are rarely moved, and are not used for day-to-day transactions, but they change hands as ceremonial gifts, to forge alliances, resolve conflicts or to apologise for wrongdoing.

The World's First Rollercoaster

Amazing inventions stories in comic-book form by Blue Peter Award-winner Mike Barfield.

- An irresistible way into science and technology with a dash of history from the brilliant Mike Barfield, author of *A Day in the Life of a Poo, a Gnu and You*, winner of the 2021 Blue Peter Award for a Book With Facts. Mike's books have sold in over 40 territories.
- Featuring the greatest inventions in architecture, travel, the home, food, fashion, toys, sports, technology and more, this book is packed with facts for curious minds. Includes tips on sending in a patent and profiles of young inventors alongside greats such as Diebedo Kere, Bertha Benz, Percy Spencer, Momofuku Ando, Kano Jigoro and Jawed Karim.

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

Of all the food items that have been invented, ice cream is probably the most popular. It's a treat that's enjoyed by people of all ages and in all climates. The first recorded recipe for ice cream was written in a Chinese text from the 10th century. The recipe was for a simple mixture of snow and fruit. In the 17th century, a French chef named Lazzaro Spallanzani invented a method for making ice cream that was easier to make and more enjoyable to eat. This was the beginning of the modern ice cream we know today.

Easy Ice Cream

15

Bicycle

"Freedom on two wheels"

Did you know that the first bicycle was invented in the 18th century? It was a simple wooden frame with two wheels of different sizes. The front wheel was much larger than the back wheel. This was called a 'boneshaker'. It was used for transport and recreation. In the 19th century, the bicycle was improved with a chain drive and equal-sized wheels. This was the beginning of the modern bicycle we know today.

Pedious Penny-Farthing

Camera

"Say cheese"

24

Although it's often thought of as a simple device, the camera is a complex piece of technology. The first camera was invented in the 17th century. It was a simple box with a lens on one side and a piece of paper on the other. Light rays from an object outside the box would pass through the lens and create an inverted image on the paper. This was the beginning of the camera we know today.

Developed to Perfection

High-Speed Train

"No-speed" "no-stops"

25

Before the 19th century, the only way to travel long distances was by horse-drawn carriage or stagecoach. This was slow and uncomfortable. In the 19th century, the steam locomotive was invented, which allowed for much faster travel. In the 20th century, the high-speed train was invented, which allowed for even faster travel. The first high-speed train was the Shinkansen in Japan, which was introduced in 1959.

Marvelous Maglevs

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine on a hill or in a field. It's a device that converts the kinetic energy of the wind into electrical energy. The first wind turbine was invented in the 19th century. It was a simple wooden structure with three sails. In the 20th century, wind turbines were improved with steel towers and composite materials. This was the beginning of the modern wind turbine we know today.

Green Energy

Helicopter

"A surprising way to fly"

35

When you think of a helicopter, you probably think of a military helicopter. But the first helicopter was invented in the 18th century. It was a simple wooden structure with a rotor. In the 19th century, helicopters were improved with metal rotors and engines. This was the beginning of the modern helicopter we know today.

Versatile VTOLs

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles – no carts, cars, bikes, buses, trucks, trains, trams or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3200 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips"

18

The invention of the Internet – a network of computers that 'speak' to each other – was a concentrated effort in the United States. The first computers were connected to each other in 1969 during the Cold War (1947–1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: LOGIN, but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want – books, food, holidays, cars – with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

Raising the Roof

A cool introduction to classical music

- Broadcaster, songwriter, composer and Scala Radio presenter Jack Pepper is an exciting, young voice in classical music.
- A fun and approachable introduction to classical music
- Includes a playlist, so you can listen as you read
- **SAMPLE CONTENTS:** Hildegard of Bingen 1098-1179; Claudio Monteverdi 1567-1643; Barbara Strozzi 1619-c. 1664; JS Bach 1685-1750; Joseph Bologne 1745-1799; Ludwig van Beethoven 1770-1827; Richard Wagner 1813-1883; Giuseppe Verdi 1813-1901; Ethel Smyth 1858-1944; Arnold Schoenberg, 1874-1951; Igor Stravinsky, 1882-1971; Florence Price, 1887 - 1953; George Gershwin, 1898-1937; Leonard Bernstein, 1918-1990

Raising the Roof

SYMPHONY

The symphony has changed over the centuries, but it is essentially an extended piece of music for a large group of players. The word had even been the Greek, meaning 'sounding together'. It is often a composer's lifetime piece because the size and cost of the orchestra is hard to pull off.

A symphony is often in four movements, with no set number of tracks. There are five movements, which are the norm, but some composers have written symphonies with as few as two movements or as many as seven. However, symphonies usually consist of four movements.

LEARNING TIP
Have a go at writing your own symphony. It's a challenge, but it's a great way to learn about the structure and style of a symphony. You can find many examples of symphonies online, and you can listen to them to get a feel for the sound. You can also try to write your own, and see how it compares to the real thing.

1800s
The first symphony was written by Joseph Haydn in 1760. It was a single movement, and it was written for a small orchestra.

1776
The first symphony with four movements was written by Wolfgang Amadeus Mozart in 1776. It was written for a larger orchestra, and it was more complex than the earlier symphonies.

1800s
The first symphony with a full orchestra was written by Ludwig van Beethoven in 1800. It was a landmark work, and it set the standard for the modern symphony.

1872
The first symphony with a full orchestra and a large chorus was written by Giuseppe Verdi in 1872. It was a landmark work, and it set the standard for the modern symphony.

1748
The first symphony with a full orchestra and a large chorus was written by George Frideric Handel in 1748. It was a landmark work, and it set the standard for the modern symphony.

Present
The first symphony with a full orchestra and a large chorus was written by Gustav Mahler in 1900. It was a landmark work, and it set the standard for the modern symphony.

Richard Wagner

1813-1883

To Listen or Not to Listen...
Can we separate opera from Wagner? Can we really understand the music without the story? Or is the music so powerful that it can stand on its own? Wagner was a pioneer in this regard, and his music has inspired generations of composers.

Wagner's Sound
Wagner's music is often described as 'total art work', where the music, drama, and visual elements are all part of a single, unified whole. This creates a sense of immersion and intensity that is unlike anything else in the world of music.

LISTEN!
Wagner's music is a challenge, but it's a reward. It's a journey that takes you to the heart of the human experience, and it's a journey that is worth taking.

George Gershwin

1898-1937

George Gershwin's Sound
Gershwin's music is a blend of jazz and classical, and it's a sound that has inspired generations of composers. His music is a celebration of the American spirit, and it's a sound that is timeless.

Piano Addiction
Gershwin was a pianist, and his music was often written for the piano. His music is a celebration of the instrument, and it's a sound that is timeless.

LISTEN!
Gershwin's music is a challenge, but it's a reward. It's a journey that takes you to the heart of the human experience, and it's a journey that is worth taking.

Hildegard of Bingen

1098-1179

Here's someone who was, in every sense, a visionary Hildegard of Bingen had visions of God and wrote them down as poems and music.

Hildegard's Sound
Her music is often monophonic - a single line, a tone on its own (mono means one, phonic means sound). This creates a sense of calm, perfect for a focused, intense contemplation of faith. Hildegard wrote mostly sacred plainchant (where people all sing the same line, with religious texts used for the words), intended for use in church. Her abbey consisted of 50 nuns who all had trained voices and would sing daily. It's believed a Benedictine nun at the time would sing for eight hours each day! With an in-house choir, then, an abbey provided an ideal testing ground for new music. Music becomes a form of prayer, and having everyone sing the same line creates a powerful symbol of togetherness through faith.

Learning by Ear
The Greeks were the first to use letters of the alphabet to represent different notes. Yet until the Middle Ages, almost all music was passed down the generations by mouth, instead of being written down. There was a lot to learn in the 600s, monks in churches are estimated to have memorised 80 hours of music, all by ear! By the 900s, it took around 10 years to teach a young chorister all the pieces they'd need to know for future services. And you think school is intense...

LISTEN!
A Feather on the Breath of God sung by Gothic Voices
Hildegard was a Bala-leaven name even in musical circles, until early music became widely performed and recorded from the 1970s onwards. One of the standards in this album, released in 1985.

She sent me a letter!
And a botany book to me!
I'm scheduling that next tour!

Gigantosaurus – Dinos to the Moon

Join our favourite dinosaurs as they put on their dino-naut helmets and take off for the MOON!

- A brand new episode tie-in inspired by a season 2 episode of the *Gigantosaurus* TV series, based on Jonny Duddle's best-selling original book. This story focuses on science, dreams of space and lessons on not giving up.
- Over 2.2 million Jonny Duddle books sold worldwide
- An epic space adventure positioned to tie in with NASA's 2025 Moon landing mission, teaching readers the importance (and fun) of science.
- The Gigantosaurus episode tie-in series has sold a combined quantity of over 200,000 copies in the UK and foreign co-editions (as of July 2022)

Gigantosaurus – Dinos to the Moon

... And four little ones who couldn't sleep!

"Look at the beautiful moon," said Tiny, gazing at the night sky.

"I heard it's a huge snowball," Bill exclaimed.

"It's a shame we'll never know," yawned Rocky. "Dinos can't go to the moon."

As the others climbed into bed and drifted off to sleep, Mazu stayed awake to think. "I'm sure I could get us there," she said. "We just need something to take us."

- Features a foreword by Marvel comics writer Ryan North.

Marvel: The Science of Super Heroes

SPIDER-MAN: ALLIES

Spider-Man has teamed up with countless other heroes in the comic fighting career, but there are some that he counts as friends.

DAVEDEVIL
A colorful and mischievous character, Dave Devil is the alter ego of the superhero known as the Spider-Man. He is a young man with a red and blue suit, and he has the ability to stretch his body and shoot webs from his wrists.

IN THE REAL WORLD
Spider-Man is a fictional character, but his powers are based on real science. The character's ability to stretch his body is based on the concept of elasticity, which is the ability of a material to return to its original shape after being stretched. Spider-Man's webs are based on the concept of polymer science, which is the study of the properties of long-chain molecules. In reality, Spider-Man's webs are made of a synthetic material called Kevlar, which is a type of fiber that is used in many industrial applications.

BLACK CAT
A brilliant and agile thief, Felicia Hardy was initially one of Spider-Man's enemies, but she later became his ally. She is a young woman with black hair and a black and white costume. She has the ability to climb walls and is a skilled acrobat.

IN THE REAL WORLD
Spider-Man's black cat costume is based on the concept of camouflage, which is the ability of an organism to blend in with its surroundings. Spider-Man's black cat costume is made of a material that is designed to absorb light, making it difficult to see in the dark.

THE AVENGERS: CAPTAIN AMERICA

Several heroes have taken the mantle of Captain America, serving as a symbol of liberty and a beacon of freedom. Captain America is more than one person, he is a symbol of standing up for what is right. Steve Rogers started the legacy of Captain America during the darkest days of World War II, but other heroes have picked up the shield.

SAW WILSON'S WINGS
The original wings used by Steve Rogers were designed by Paul Fierster and made of lightweight aluminum. They were used to transport Rogers to the army at an altitude of up to 2000 feet. The wings have since been replaced and are now strong enough to get Rogers to the top of a 1000-foot-tall building.

IN THE REAL WORLD
The original wings used by Steve Rogers were made of aluminum, which is a lightweight metal. The wings were designed to be used in a variety of ways, including as a means of transport and as a means of escape.

THE WINTER SOLDIER'S SAM
James Buchanan "Bucky" Barnes was the first Winter Soldier. He was a close friend and ally of Steve Rogers, and he was recruited by the government to become a super soldier. He was given the same serum as Steve Rogers, which gave him superhuman strength and speed. He was also given a prosthetic left arm, which was made of vibranium.

IN THE REAL WORLD
The Winter Soldier's prosthetic arm is made of vibranium, a fictional material that is stronger than steel. In reality, prosthetic arms are made of metal, and they are designed to be as strong and durable as possible.

CAPTAIN AMERICA'S SHIELD
Cap's shield is made of vibranium, a fictional material that is stronger than steel. It is designed to be as strong and durable as possible, and it is used as a means of defense and as a means of offense.

IN THE REAL WORLD
The shield is made of vibranium, a fictional material that is stronger than steel. In reality, shields are made of metal, and they are designed to be as strong and durable as possible.

THE FANTASTIC FOUR: POWERS

The Fantastic Four get their powers when Reed Richards took the team on a mission into space where they were blasted by cosmic rays, changing them forever. They are a team of explorers, adventurers and heroes who have saved the world countless times.

NEED INCHES? MEET FANTASTIC
About halfway to one of Earth's greatest secrets, and he's ready to help. He's the only one who can stretch his body to an incredible length. He's the only one who can stretch his body to an incredible length. He's the only one who can stretch his body to an incredible length.

IN THE REAL WORLD
The character's ability to stretch his body is based on the concept of elasticity, which is the ability of a material to return to its original shape after being stretched. In reality, the character's body is made of a material that is designed to be as elastic as possible.

COULD YOU STRETCH LIKE MISTER FANTASTIC?
Your body does change over the course of a day, but only very slightly. You are taller when you wake up in the morning, and you may be a little taller at the end of the day, but you haven't stretched. Throughout the day, Earth's gravity pulls on your body and constantly compresses the bones in your spine, making you a little shorter.

SUE STORM: INVISIBLE WOMAN
Sue Storm is the only woman on the team. She has the ability to become invisible. She is a young woman with blonde hair and a blue and white costume. She has the ability to become invisible by absorbing the gamma rays that give the other team members their powers.

IN THE REAL WORLD
The character's ability to become invisible is based on the concept of invisibility, which is the ability of an object to be unable to be seen. In reality, invisibility is a complex phenomenon that involves the manipulation of light waves.

COINIC IDEAS
Coincidence is not just a random event. It is a result of the laws of probability. In reality, coincidences are the result of the laws of probability, and they are not as rare as they seem.

SPIDER-MAN

The science behind Spider-Man is very interesting. I like him, but I would definitely NOT have named myself after an arachnid. Also, that's not how I would've made those webs, but I like what he did there. It must be some type of polymer. Cool. I've met more than one spider-guy, but I'm not sure how many there are.

- HOW DID SPIDER-MAN GET HIS POWERS?
- WHERE DOES SPIDER-MAN GET HIS WEBS FROM?
- WHAT GADGETS DOES SPIDER-MAN HAVE?
- DO THE DIFFERENT SPIDER-MEN HAVE DIFFERENT POWERS?
- HOW DO DOCTOR OCTOPUSS ARMS WORK?
- CAN THE VULTURE REALLY FLY?
