Little Explorers: Science

A fun, novelty introduction to science.

- Over 30 flaps included
- A new title in the successful and long-running *Little Explorers* series which has sold over 1.25 million copies worldwide (as of July 2022)
- An easy first introduction to the fundamental areas of science, perfect for a child starting school
- Contents includes: biology, chemistry, Earth science, physics, space, periodic table, energy and forces, inventions

Little Explorers: Science

A HIDDEN WORLD!
Some scientists study tiny things that can't be seen without the help of special machines. Some things are so small that they can't be seen at all though scientists can see and feel them.

What is the world made of?
Everything in the universe, from the air we breathe to the stars in the sky, are made of matter. Some people use the word 'matter' to describe all of the things which make up the universe. Matter is made of atoms. Some atoms are called 'elements' and some are called 'compounds'.

What is an atom made of?
Proton
Neutron
Electron

Chemical reactions
A chemical reaction is a reaction where one or more substances are changed into one or more new substances. This is called a chemical reaction.

Look in here
Look in there
Look in here
Look in there

The building blocks of life
All living things are made of tiny building blocks called cells. Cells are the smallest units of life. Some living things, such as bacteria, are made of just one cell. But most plants and animals are made of lots of cells. Scientists use a microscope to look at cells. Some cells are so small that you need a microscope to see them.

States of matter
Matter can be in three states: solid, liquid, and gas. They are called the three states of matter. Heat things can melt or freeze. Heat can also change the state of matter.

Particles everywhere!
Molecules are tiny particles that are made of two or more atoms. They are held together by forces. Some molecules are so small that you need a microscope to see them.

Some molecules help us to fight the bad germs and small diseases.
Some molecules help us to fight the bad germs and small diseases.

Stomach
Large intestine
Small intestine

WHAT IS CHEMISTRY?
All the matter in the universe is made of substances called elements. Chemistry studies elements and how they are joined together to make new substances.

The periodic table
The periodic table shows all the elements. They are arranged in the periodic table, which groups similar elements together. It is arranged like this.

Group of elements
26 Fe Iron

What is a scientist?
Scientists are people who study science. They come up with new ideas, then test them with experiments to discover new information. Some scientists work in laboratories, but others work outdoors. A few scientists even work in space!

BURSTING WITH LIFE!
Our planet is bursting with life from tiny insects to towering trees and our machines. Our bodies are made of tiny things in the same way that plants and animals are made of tiny things.

There are millions of different plants and animals on Earth. Scientists study them and try to understand how they work. They use special tools to help them do this.

There are many ways to study life. Some scientists use microscopes to look at tiny things. Some use special tools to study plants and animals. Some use special tools to study the way things work.

CLASSIFYING ANIMALS
Invertebrates
Animals that don't have a backbone such as insects, jellyfish, and earthworms.

Vertebrates
Animals that have a backbone such as fish, birds, and mammals.

All the animals on Earth belong to one of these two groups.

Animals have different ways of moving. Some animals can fly, some can swim, and some can crawl. Some animals can even change their shape to fit in with their surroundings.

WHAT IS SCIENCE?
Science helps us to learn about the world and find answers to our questions about it. There are lots of types of science. Each one looks at a different part of the world around us.

All kinds of science!
Each scientific area has its own special name. Here are just a few of them.

What is a scientist?
Scientists are people who study science. They come up with new ideas, then test them with experiments to discover new information. Some scientists work in laboratories, but others work outdoors. A few scientists even work in space!

What's the big idea?
An idea that a scientist wants to test is called a hypothesis. Scientists don't make guesses. They use things they already know or can see, called observations, to help them come up with their hypotheses.

What is data?
Data is the word scientists use for the information they gather when they do an experiment. The data might be measurements, or things that they have noticed.

What is this scientist doing?
Observation

What is this scientist doing?
Step by step
Scientists work very carefully to avoid making mistakes. They often carry out an experiment several times, following the same steps.

What is this scientist doing?
Physics
Physics studies energy, forces and what things are made of.

BIOLOGY
Biology studies things that are alive.

CHEMISTRY
Chemistry studies chemicals and what they do.

EARTH SCIENCE
Earth science studies the planet we live on, including its land, oceans, climate and atmosphere.
