The Little Gardener's Handbook

A vibrant introduction to gardening.

- A vibrant first introduction to gardening for ages 6+
- Includes DIY activities to try at home.
- Text by expert ecologist and educator, Michael Holland.
- Colourful, charming artwork by illustrator Maria Dek.
- Expanding the younger side of the Big Picture Press list.
- Gardening is a subject only growing in popularity.
- Arlin quarter binding and matt lam cover finishes.

Our Time on Earth

This book about animal life cycles is a celebration of creatures big and small.

- **WINNER of the Association for Science Education Award 2022**
- Sample contents: Mayfly; Honey Bee; Monarch Butterfly; Opossum; Etruscan Shrew; Giant Pacific Octopus; Axolotl; Trapdoor Spider; Grizzly Bear; Brandt's Bat; Orangutan; Laysan Albatross; African Elephant; Saltwater Crocodiles; American Lobster; Galapagos Giant Tortoise; Bowhead Whale; Greenland Shark; Immortal Jellyfish
- Consulted by wildlife cameraman and producer Fredi Devas, who has worked on David Attenborough's One Planet: Seven Worlds BBC series.
- Discover creatures who are born within a day of their mothers, or others who stay infantile for almost one hundred years.

Locked in the Museum

An action-packed tour of the most marvellous museum in the world!

- A thrilling behind-the-scenes museum tour featuring six stunning gatefold scenes.
- Featuring artefacts from real-life museums around the world, the exhibits are organised into eight galleries: Dinosaurs and fossils, Nature, Human Origins, Ancient Civilisations, Art, Transport, Space, Science and Technology and Earth
- A fun and accessible cross curricular title perfect for curious kids who are interested in everything from ancient history and art, to STEM topics.
- Features a section on the challenges faced by modern museums and a glossary of tricky terms.
- Cover finishes: spot uv and emboss

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Ice Cream 14
"Creamy from dessert"

Bicycle 15
"Freedom on two wheels"

Camera 24
"Click cheese"

High-Speed Train 25
"At-speed worldwide"

Wind Turbine 34
"Harnessing the power of wind"

Helicopter 35
"A whirling way to fly"

Easy Ice Cream
This is a simple recipe for making ice cream at home. It involves mixing cream, sugar, and vanilla, then churning it in an ice cream maker. The recipe is easy to follow and suitable for children.

Perilous Penny-Farthing
The penny-farthing was a type of bicycle that was popular in the late 19th century. It had a large front wheel and a much smaller rear wheel. It was called 'perilous' because it was difficult to ride and could be dangerous.

Developed to Perfection
This section discusses the evolution of the camera from its early days to modern digital cameras. It covers the invention of photography and how cameras have become more sophisticated over time.

Marvelous Maglevs
Maglev trains are a type of train that uses magnetic levitation to travel. They are called 'maglevs' and are known for being very fast and smooth. This section explains how they work and their benefits.

Green Energy
This section focuses on wind energy and how wind turbines generate electricity. It discusses the benefits of renewable energy and how wind power is becoming a more significant part of our energy supply.

Versatile VTOL
Vertical Take-Off and Landing (VTOL) aircraft are a type of plane that can take off and land vertically. They are very versatile and can be used in a variety of ways, including for military and civilian purposes.

Wheel 17
"The revolutionary design that makes the world go round"

Internet 18
"The world at your fingertips"

Potter's Wheel
The potter's wheel is a tool used by potters to shape clay into pots and other vessels. It has been used for thousands of years and is still a common tool in pottery today. This section explains how it works and its history.

World Wide Web
The World Wide Web (WWW) is a system of interlinked hypertext documents that can be accessed via the Internet. It is one of the most important technologies of the modern world and has revolutionized the way we communicate and access information.

Dinosaur Dynasty

Step back in time to when dinosaurs stalked the earth in this stylish non-fiction book by Jack Tite, the creator of *Mega Meltdown* and *Viking Voyagers*.

- The third stunning book from author-illustrator Jack Tite
- Large fold-out spreads provide additional details, creating an even more interactive and engaging reading experience for curious minds
- Fully illustrated in Jack Tite's striking contemporary style, this book combines lively, easy-to-read narration with fun facts and insights about each dinosaur's appearance, diet, and survival strategies, making complex information accessible to young readers

A stunningly illustrated tribute for train lovers of all ages, celebrating the ingenuity of trains past, present and future.

- Sample contents: The First Railways; Steam Locomotions; The Ffestiniog Railway; The Orient Express; Freight Trains; The Baikonur Cosmodrome; Mail by Rail; The California Zephyr; Mountain Railways; The Darjeeling Himalayan Railway; Trams; Sky Lines; Railways At War; The Princess Christian; High-speed Rail; The Shinkansen
- Beautiful artwork by multi award-winning artist Ryo Takemasa
- Stunning journey through the history of locomotives, suitable for all ages
- Expertly written by railway historian, Alastair Steele

Locomotion

THE FIRST RAILWAYS

It is strange to think that they have only been around as we know them for about two hundred years.

Pushing Jolly went on to influence many other engineers. The first public railway to use steam locomotives, the Stockton and Darlington Railway in England, opened in 1825. It was designed by George Stephenson, who went on to be known as the Father of Railways for his influential role in so many early schemes.

THE GAUGE

One of Stephenson's most significant decisions was to set the gauge for British railways. The gauge is the distance between the rails and is measured from the inside edge of one rail to the other. By using the same gauge in different railways, Stephenson could assure that the trains were compatible when they crossed. He decided on a gauge of 4' 8 1/2 inches, which became known as the "standard gauge." Today, more than half of the world's railways use this gauge.

The standard gauge was not without its rivals. In central England, Britain, engineer of the British Great Western Railway, decided on a wider gauge that he designed the first between London and Bristol, which opened in 1826. The wider track, set at a width of 7' 6 1/2 inches, allowed for more stability at speed, and bigger vehicles which could carry greater loads. Unfortunately for Brunel, his ideas were taken too far to compete, and by 1852 all the tracks had been changed to the narrower gauge of his rival, Stephenson.

STEAM LOCOMOTIVES

Once the possibility of steam-powered engines had been realized, a whole host of locomotives were tried and tested around the world. Some proved too heavy, others too unreliable and some were so dangerous, but the arrival of one revolutionary design changed the course of history. Rocket, designed by engineer Robert Stephenson (George Stephenson's son – see page 8) was to provide the principal design for the vast majority of steam locomotives that follow.

of steam locomotives that followed.

Heat from the fire passes through the **boiler** via smaller tubes. The heat the water to boiling point, raising the steam pressure.

As the pressure builds, the steam is drawn into the **expansion**. These are controlled by valves, which act like a gasline in a car. The steam-pressure does not **ignite** inside the expansion, blowing the wheels out a hole which connects them.

[illegible]

A central part of Fischer's immediately design was the bottom. Multiple tubes ran through it from the top, almost antiparallel the surface area, and provided the major means of cooling. A filter pipe was placed to divert steam from the cylinders into the chimney, helping to cool the hot gases along the tubes. While enough thermal energy passed and increased efficiency. Reheating tubes and their pipes, the Fischer became the size of a barrel from the joint onwards.

ELECTRIC LOCOMOTIVES

The first electric train was tested as far back as 1837. Unlike steam trains, electric locomotives do not carry fuel on-board. Instead, they are powered by electricity which can be supplied from overhead lines, a third rail or in storage such as batteries. Because electric trains can be powered by renewable energy sources, they are considered less polluting than steam or diesel trains.

The first electric passenger train was presented by Werner von Siemens at an exhibition in Berlin in 1879. Consisting of a small locomotive and three cars, it reached a speed of just 13km/h.

The *ETR 200* is a record-breaking electric passenger train. It is widely considered one of the first ever high-speed trains and was put into service in 1936. In 1939, it broke the speed record for trains by reaching just over 201km/h.

The ICE (InterCity Express) is one of Germany's most successful electric trains. The third generation ICE 3, can reach speeds of 300km/h. Since 2018, it has run on entirely **renewable energy** sources.

DIESEL LOCOMOTIVES

In a diesel locomotive, the power comes from an engine that burns diesel oil. While a steam locomotive needed two people to crew it and hours to attain the right steam pressure, a diesel locomotive could simply be switched on and driven away, making them much easier and much cheaper to run. Rudolf Diesel patented his first diesel engine in 1898, but it wasn't until around 1912 that they were first used in a locomotive.

The famous *DRG Class SVT 877 Hamburg Flyer*, often referred to as the 'Flying Hamburger', was first put into service in 1933. Its smooth, rounded shape was influenced by Zeppelin **airships** allowing for minimal air resistance.

The *Delco*, built in 1956, was considered the most powerful diesel locomotive in the world at that time.

The *Intercity 125* is one of the most successful diesel trains of all time. So named because it was designed to cruise at 125 mph (about 201 km/h) when in service, it also holds the all-time speed record for diesel trains of 238 km/h, which it reached in 1987.

- RAILWAYS OF THE WORLD -
THE FFESTINIOG RAILWAY

The *Floodlight railway* in North Wales is a marvel of 19th century engineering. It was built to transport slate for roof tiles from the quarries around the town of Blaenau Ffestiog, high up in the mountains of Snowdonia, down to the harbour at Porthmadog. It opened in 1825 using a narrow gauge of 5'6" to match the wagons already in use in the quarries.

By the 1980s, the railway was generating so much work that it was clear that the narrow-gauge line up there was also becoming strained for a passenger service, which meant the railway had to be reworked. The solution was for several small steam engines to be built, which were among the first narrow-gauge locomotives in the world. By 1980, there were six working; the first had more than 100 years to struggle with the demand.

It's ironic, a biotechnology class was presented to the science teacher, engineer Robert "Furber" Farnum, who had patented the "Double Earle," an ingenious design and construction design. This was an effort to use bioengineering as a model for his work, and training with a pair of "Double Ears," which would be designed to fitting his mouth but that had the same shape. The first of these was collected, and was the same (17 years) another device Double Earle's were built for the industry. They were an excellent fit, but Farnum allowed the industry to use his patent for free. However, so that it is not too late to find out.

Discover the secrets of animal skeletons with this fascinating inside look at the animal kingdom.

- An in-depth look at the skeletons of the world's most amazing creatures, revealing the secrets of how animals run, jump, swim and fly.
- Written by zoologist and non-fiction author Jules Howard.
- Featuring beautifully detailed illustrations by Chervelle Fryer.
- Cover treatments are matt lam, spot UV and 100% neon pantone

Discover 12 upheavals which changed the world forever.

- A thought-provoking exploration of the idea of revolution: how upheavals, ideas and technology have irreversibly changed the world.
- Content split into three distinct chapters: power struggles, social revolutions and new technology. Chapter openers discuss what the word “revolution” means in each of these contexts, while showing how the idea is linked across all areas.
- Written by long-time author and history enthusiast Joan Lennon, who is a Royal Literary Fund Fellow at Dundee University and regular contributor on The History Girls blog. Her previous non-fiction book *Talking History* was shortlisted for the SLA Information Book Award 2023 and longlisted for the UKLA Book Awards 2023 in the Information Books category.

BEAUTIFUL

A Celebration of Evolution

All of nature is beautiful. This stunning book shows how a variety of amazing creatures have evolved to look and behave the way they do.

- Stunning watercolour artwork by the phenomenally talented natural history artist William Spring.
- Large format with 100% foil cover treatments makes this the ideal gift book.
- A poignant message with significance for today's world.
- Includes 50 beautiful creatures to marvel at.
- The perfect book for fans of *Hidden Planet* by Ben Rothery and *The Golden Mole* by Katherine Rundell.

Aldabra Giant Tortoise

It was the tortoise from Aesop's famous fable The Hare and the Tortoise who gave us the phrase 'slow and steady wins the race' (it couldn't be true for this animal, especially when put into context). Tortoises have been gently plodding around the planet for 300 million years.

The genetic structure of the vine of the longspur lark (*Spizella monticola*) in the United States has been examined in a study by David S. Richardson and his colleagues, published in the *Journal of Biogeography*. The authors found that the genetic structure of the longspur lark is highly complex, with many distinct genetic clusters. This is due to the fact that the longspur lark is a highly mobile species, with individuals often migrating long distances between breeding and wintering grounds. This high mobility has led to a high degree of genetic mixing, which has resulted in the formation of many distinct genetic clusters. The authors also found that the genetic structure of the longspur lark is highly correlated with its geographic distribution. This suggests that the genetic structure of the longspur lark is a result of historical processes, such as migration and colonization, rather than local adaptation.

Pygmy Seahorse

As its name suggests, the pygmy woodhoose is very tiny indeed, typically measuring just a centimetre or two in length.

The Barghaire's pygmy marmoset has evolved to live in wonderfully well-recognized that it was first discovered until the late 1960s. It was only spotted when a scientist who was studying a piece of coral found the tiny animal clinging to it in a branch. Today, there are now known species of pygmy marmosets, most of which live in the Cordillera of Southeast Asia. In 2008, the *Myiomeris pygmaea* (aka known as the 'Japan pig') was discovered on the coast of Japan. More recently, in 2020, *Myiomeris* rats, also known as the African pygmy marmoset, were discovered in South Africa.

From experience, I estimate that 90% of my work is unimportant and automatically lacks any of the ingredients of passion, so it is a waste to me just to do them. This criterion helps me to filter out the unimportant and focus on the important. I make sure that all work on the list is actually helping to achieve the goals of the calls before. It signals the majority of the work that probably won't take up more of my time, and will not take up more of my time. I have found that this is a very effective way to filter out the unimportant, uninteresting, and unexciting work. I am not sure if it is a good idea to take on the work of the unimportant, as it is a waste of time that could be used for other things. I have found that this is a very effective way to filter out the unimportant, uninteresting, and unexciting work. I am not sure if it is a good idea to take on the work of the unimportant, as it is a waste of time that could be used for other things.

Sperm Whale

The whale has been the stuff of myth and legend for as long as humans have ventured across the world's oceans. Looking at the sperm whale, it's easy to see why.

The sperm whale is truly awe-inspiring. It is one the largest animal predators in the world, measures around 35 meters in size in length, and weighs around 40 metric tons. Some have been recorded as being much larger, but these giant whales are very rare. The sperm whale has several unique adaptations that make it not just another whale species.

The information, which you may have inferred to be noise, allows the whale producers sounds, such as clicks and whistles, that travel through the water, as objects, and are reflected back to the whale. It then hears these reflected sounds and uses the information to locate the object the sound bounced off. Some animals can sense the air rather than water - bats, for example (see page 55). To produce its own sounds, the sperm whale has phonic lips in its nose. As air passes through the nasal passage and past the phonic lips, the surrounding tissue vibrates, producing the loudest sounds of any animal.

The sperm whale's incredible head, which takes up almost a third of its body, is almost purely devoted to noise. Within it, along with a huge brain containing an olive-sized cetacean gemstone, is a ball of other complex fluid-filled

There are fluid-filled structures beneath a whale's skin that produce sound, but not in such

For the whole when it came into contact with other animals. The strategy was first shown in the mid-life members of the whaling ship *Essex*, which captured Humpback Whales the second *Blade* died.

For a long period of time, squamates, a highly fecundate subcategory, were considered just lizards. The harvesting of this suborder for the hunting of sports whistles in large numbers, causing many populations to become extinct, while whistling was stopped in the late 1950s. Unfortunately, many reactions continue to emerge in this practice. Whistles are also threatened by climate change and pollution, as well as becoming entangled in commercial fishing nets.

Bat-Eared Fox

The name explains it all: a fox with ears like a bat. But why has this extraordinary animal developed such unusual features?

Living in small, tightly knit social groups, these foxes make their home on the savannas of eastern and southern Africa. This is a dry and hot landscape where food is limited and danger is ever-present. The fox's large ears are an adaptation shared by many other inhabitants of these kinds of environments, such as the fennec fox, showing how evolution works to find the most efficient 'solution' to the problem of survival (bearing in mind that nothing is ever 'finished' in evolution – it's a constant work in progress).

In the case of a fox, its specialized ears serve several purposes. Firstly, they give it an astonishing sense of hearing. Not only does this allow the fox to detect predators and keep itself safe, it also helps it to be a predator itself. It consumes a wide range of prey, including metals, spiders and millipedes, and occasionally even small reptiles and mammals – all of which are elusive, fast and, more often than not, actually hidden, as they live or shelter underground. In such situations, the ability to hear your dinner before you see it makes a lot more to locate. Bat-eared foxes can often be seen walking slowly with their noses to the ground (their sense of smell is also extremely sensitive), their huge ears cocked forwards, listening for the tiny scratch of an insect in its burrow. Once the fox has located its prey, it swiftly digs until it can reach its target. Specialized teeth make it easy to crunch through the (often thick) armour of its insect lunch.

The ears also serve another vital function, one that's particularly important if you live in a hot environment and you're covered in fur: heat regulation. Like those of the elephant (see page 48), the fox's ears serve as radiators. Because of the fine capillary veins close to the surface of its ears, the fox can remain at a comfortable temperature by venting excess heat from its blood into the air.

Apart from its large ears, the bat-eared fox also has more teeth than other species of fox (between 40 and 50 teeth in total). In fact, these unique creatures have more teeth than most mammals. Bat-eared fox has three upper and four lower molars on each side of the mouth, while other members of the canid (or dog) family have two upper and three lower molars. These extra teeth mean that the fox is perfectly adapted to chewing creepy crawlies.

Although occasionally hunted, the bat-eared fox is one of the increasingly rare examples of an animal with a safe conservation status. It is helpful in keeping down the number of termites, which are considered pests. This means that the biggest commercial value for humans comes from keeping these foxes alive. Most threats to this fox come from the dangers its food sources might face, such as flooding from damming or the use of insecticides.

You Wouldn't Want To Be On Apollo 13!

The history of a not-so-stellar space expedition gone wrong!

- History made funny - brutal truths, comedic illustrations and fun facts that engage reluctant readers. Perfect for Horrible Histories fans.
- A hilarious non-fiction story on the evergreen topic of space exploration, tying in with the 2025 NASA moon mission.
- Combines funny text and comical illustrations to fascinating facts, managing to accurately convey historical realities in an educational yet entertaining way.

You Wouldn't Want To Be On Apollo 13!

Practise makes perfect

The whole crew practises everything that you will have to do during the mission. You do it over and over again until you could do it in your sleep. You train in simulators that look exactly like the real spacecraft. The mission controllers keep you on your toes by surprising you with all sorts of emergencies to see how well you deal with them. If you're going to make a mistake, it's better to do it in the simulator than on the way to the Moon. By the time launch day comes, you have to know the spacecraft inside out, be able to fix it perfectly and know what to do in any situation.

Handy hint
Remember to practise everything you will have to do during the mission. You do it over and over again until you could do it in your sleep.

Do the Math
You will need to do a lot of math during the mission. You will need to know how to calculate the distance to the Moon and how long it will take to get there.

Do the Work
You will need to do a lot of work during the mission. You will need to know how to operate the spacecraft and how to fix it.

Do the Repair
You will need to know how to fix the spacecraft. You will need to know how to replace a part and how to weld.

Cold, wet and stuffy

Keeping warm is not as important as getting home alive, so the spacecraft heaters are switched off to save electricity. The temperature falls to just above freezing. Pressure from your breath condenses on the cold instrument panels, walls and windows. The whole spacecraft is wet. It is dark too, because most of the lights are switched off. It gets very stuffy – the Lunar Module was designed for two astronauts, not three, so it can't purify the air fast enough. The bottled-out carbon dioxide in the air rises to a dangerous level. If it continues to rise, you will lose consciousness! You have to do something about it.

A wee problem!
You need a toilet in a spacecraft. It is a tricky one. You need to collect the urine and the faeces and get rid of them. You need to make sure that the toilet is working properly and that you can use it without any problems.

A bit of do-it-yourself
The Lunar Module has a lot of things that you can do yourself. You can fix a broken part, you can replace a part, you can weld. You need to know how to do these things and you need to know how to use the tools.

Handy hint
Remember to keep warm. You need to wear your space suit and you need to make sure that the heaters are working properly.

Lost mission

If everything had gone as planned, Apollo 13 would have landed on part of the Moon called Fra Mauro. Apollo 11 and 12 landed in the Sea of Tranquility and the Ocean of Storms. The ground there was flat because lava had flowed over it. Scientists wanted samples of older rocks from the hills and mountains that hadn't been covered by lava, but these places are more dangerous to land. The earlier missions proved that astronauts could fly the Lunar Module normally and choose a safe landing spot. It was decided that Aquarius from Apollo 13 would land in the Fra Mauro hills.

Handy hint
Remember to keep warm. You need to wear your space suit and you need to make sure that the heaters are working properly.

What a fantastic view!
If nothing had gone wrong, the astronauts would have seen a fantastic view of the Moon. They would have seen the Sea of Tranquility and the Ocean of Storms. They would have seen the hills and mountains that hadn't been covered by lava.

Handy hint
Remember to keep warm. You need to wear your space suit and you need to make sure that the heaters are working properly.

We have LIFT OFF!

When the countdown reaches zero, you start a 12-minute rollercoaster ride through Earth's atmosphere to space. As the rocket leaves the launch pad, the time on the clock at Mission Control in Houston, Texas, is 13.13! Pictures of the soaring rocket and its flight path appear on a big display screen at Mission Control.

Handy hint
Make sure you are strapped tightly into your seat. If you aren't, you'll bounce around the Command Module like a cork in a bottle when the rocket blasts off!

The 'T' Timeline

T minus 3 minutes, 7 seconds
The Saturn V rocket is given the firing command and starts its automatic launch sequence. Computers start its fuel pumps.

T minus 8.9 seconds
The first-stage engines fire. The rocket is held down on the launch pad until all five engines are running.

Zero
Apollo 13 and the 3,000-tonne Saturn V launch-escape gently lift off the launch pad.

1*3 minutes, 20 seconds
The launch-escape tower's rockets fire, carrying the tower and boost protective cover away from the top of the spacecraft.

1*2 minutes, 44 seconds
The empty first stage falls away and 2 seconds later the second-stage engines fire.

1*3 minutes, 53 seconds
The empty second stage falls away three seconds later, the third-stage engines fire.

1*12 minutes, 39 seconds
The spacecraft is safely in orbit around Earth. Time to check that everything is working properly.
