# From Cells to Ourselves

*From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.*

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

# From Cells to Ourselves

## HOW DID LIFE BEGIN?

**THE 1920s** American chemist Stanley Miller and British physicist James Watson conducted the first experiment to show how simple molecules could combine to form amino acids, the building blocks of proteins. Their experiment, called 'Miller-Urey', was the first to show that life could arise from simple molecules.

**THE 1950s** British scientist Francis Crick and American physicist James Watson discovered the structure of DNA, the molecule that carries the genetic code. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 1960s** British scientist James Watson and American physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 1970s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 1980s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 1990s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 2000s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 2010s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

**THE 2020s** American scientist James Watson and British physicist Francis Crick discovered the structure of DNA. They showed that DNA is made of two strands that are twisted around each other, forming a double helix. The strands are made of sugar and phosphate groups, and the spaces between them are filled with nitrogenous bases. The bases are the letters of the genetic code, and they determine the sequence of amino acids in a protein.

## THE DINOSAUR DETECTIVES

In the 19th century, scientists discovered, investigated and named many species of dinosaurs. But for a long time, these dinosaurs remained hidden.

**MARY ANNING (1799-1847)** was a young girl who lived in Lyme Regis, Dorset. She was known for her discovery of fossil shells. In 1830, she discovered a fossil of a pterosaur, which she named 'Pterodactylus'. This was the first fossil of a pterosaur to be discovered. She also discovered other fossils, including a fossil of a dinosaur, which she named 'Iguanodon'.

**WILLIAM BUCKLAND (1784-1861)** was a geologist and naturalist. He was known for his discovery of the first fossil of a dinosaur, which he named 'Megalosaurus'. He also discovered other fossils, including a fossil of a dinosaur, which he named 'Iguanodon'.

**RICHARD OWEN (1804-1892)** was a geologist and naturalist. He was known for his discovery of the first fossil of a dinosaur, which he named 'Megalosaurus'. He also discovered other fossils, including a fossil of a dinosaur, which he named 'Iguanodon'.

**OSBORN MARSHALL (1790-1852)** was a geologist and naturalist. He was known for his discovery of the first fossil of a dinosaur, which he named 'Megalosaurus'. He also discovered other fossils, including a fossil of a dinosaur, which he named 'Iguanodon'.

**THE GREAT OCEANIC WALKER** was a geologist and naturalist. He was known for his discovery of the first fossil of a dinosaur, which he named 'Megalosaurus'. He also discovered other fossils, including a fossil of a dinosaur, which he named 'Iguanodon'.

## THE END OF THE DINOSAUR AGE

For a long time, people believed that the dinosaurs were a separate group from the other animals. But in the 19th century, scientists discovered that dinosaurs were actually a group of animals that had evolved from other animals. This was the beginning of the theory of evolution.

**THE 19th century** scientists discovered that dinosaurs were a group of animals that had evolved from other animals. This was the beginning of the theory of evolution.

**THE 20th century** scientists discovered that dinosaurs were a group of animals that had evolved from other animals. This was the beginning of the theory of evolution.

**THE 21st century** scientists discovered that dinosaurs were a group of animals that had evolved from other animals. This was the beginning of the theory of evolution.

## EARLY IDEAS ABOUT EVOLUTION

How long is a million seconds? Have you been alive for one billion seconds? What was happening a million days ago? We find it very difficult to comprehend these huge numbers. If we don't have a feel for how long a million seconds is, how can we possibly comprehend time spans of millions or billions of years? This is one reason why some people have a problem with evolution. The idea that single, primitive cells evolved into all the species that have ever lived seems incredible, unless you get to grips with the timespans involved.

**In ancient Greece, philosopher Anaximander suggested that one type of animal could change into another, while Empedocles thought that new types of living things could be made from a range of parts that already existed.**

**There's NO WAY he's getting into elephants on that boat.**

**Zam, I've gotting me elephants on that boat.**

**The naturalist George-Louis Leclerc proposed a way for the Earth to have formed from debris in space. Although he believed in spontaneous generation, he thought that animals could change as they migrated to different conditions. This later explains the discovery of elephant fossils in North America, and mammoth fossils in Siberia, although living elephants are today only found in Africa and South Asia. He suggested the American ones had become extinct, while the mammoths had changed as they migrated south.**

**I've got it!**

**Erasmus Darwin was Charles Darwin's grandfather. He was a doctor, poet and naturalist, and in his book 'Zoonomia, or, The Laws of Organic Life' he was one of the first people to propose a theory of evolution. He never hit on the idea of natural selection, but did recognise the importance of sexual selection (see page 59) and realised it could cause changes in species.**

## GRADUAL CHANGES

In the early 1800s Jean-Baptiste Lamarck, inventor of the terms 'invertebrate' and 'biology', was the first person to develop a coherent theory of the development of life on Earth and its evolution. He believed that life had originated by spontaneous generation, rather than creation by deity, and had then become more complex and varied over many generations. Lamarck suggested how this could happen. His idea is often called the 'Theory of Evolution by Acquired Characteristics'. In simple terms, he thought that the more an animal used an organ during its lifetime, the more well-developed it would become and that these changes could be inherited by offspring if both parents had the same developments.

**THE EVOLUTION OF THE GIRAFFE'S NECK, ACCORDING TO LAMARCK:**

- 1) Early giraffes had short necks.
- 2) Giraffes reach upward to graze on leaves.
- 3) This stretches their necks very slightly over their lifetimes.
- 4) The next generation of giraffes inherits these slightly longer necks.
- 5) This process is repeated over many generations until we arrive at modern, long-necked giraffes. Lamarck was not suggesting that their necks suddenly shoot out like telescopic poles!

**THE PROCESS ALSO WORKED THE OTHER WAY:**

- 1) Early penguins had wings with which they could fly.
- 2) Penguins spend most of their time swimming and very little flying.
- 3) Their wings become smaller, with smaller feathers, from lack of flying.
- 4) The next generation of penguins inherits these smaller, more flipper-like wings.
- 5) This process is repeated over many generations until we arrive at the modern penguin, which can no longer fly and whose wings are now adapted to help it swim instead.

# The Fixer of Broken Things

**What happens when the famous fixer of broken things finds a problem that she can't solve?**

- From the author and illustrator of *Number 7 Evergreen Street*, winner of the Royal Institute Of British Architects' Student Choice & Teacher's Choice for 5-7 year olds
- Julia Patton is an up-and-coming picture book talent in both the UK and the US. Bartleby from *The Very Very Very Long Dog* (Sourcebooks) is on the Barnes and Noble character wall of fame in the US.
- A wonderful story about sadness and how talking to a support network can help. The 'broken thing' Bea finds is a clockwork heart and speaking about her problems is what makes it work again.

# Day and Night

## A narrative non-fiction story of a day on Earth

- Sample contents: TWILIGHT Mule deer and mountain lion (North America); DAWN Spiders weaving webs (Australia); EARLY MORNING Hummingbirds & sweat bees (Mexico); LATE MORNING Andean condor (South America); NOON Cicadas (Western Europe); EARLY AFTERNOON Caracal, python (Africa); EARLY EVENING coral reef (Fiji); DUSK Moonflowers & sphinx moth (South Asia)
- Glow-in-the-dark ink on the nighttime pages
- This book can be read as a gentle story at bed time or to learn more about the world
- Cover treatment: matt lam + spot UV + glow-in-the-dark-ink (cover and nighttime pages)

# Day and Night

## A Guide to Day and Night

### Polar night and midnight sun

At the very north and south of Earth, days work differently. For six months of the year the sun never rises above the horizon. This is called the **POLAR NIGHT**, and it is dark all the time. For the other six months of the year, the sun never falls below the horizon. This is called the **MIDNIGHT SUN**, and it is light all the time.

This phenomenon happens because Earth is tilted. When one pole is tilted towards the sun, the other pole is tilted away. This makes daytime or nighttime last more than 24 hours in these places.

<h4>Dawn</h4> <p>Before the sun has risen above the horizon, the sky lightens. This time of day is also known as twilight.</p>	<h4>Sunrise</h4> <p>The sun rises higher, eventually coming up over the horizon line, warming the air.</p>	<h4>Daytime</h4> <p>The period between sunrise and sunset, when the sun peaks up over the horizon line then travels in an arc across the sky. It is warmer than it is at night and there is more food around, but animals are more easily spotted by predators in the light.</p>	<h4>Sunset</h4> <p>The sun sinks below the horizon line, causing light and warmth to fade.</p>	<h4>Dusk</h4> <p>The sun lowers even more, even though we can't see it now. The sky grows darker but there is still a faint glow of light. This time of day is also known as twilight.</p>	<h4>Night</h4> <p>The period between dusk and dawn, when it is dark. The air is cool and more humid. There is less food around at night but under the cover of darkness animals can avoid getting caught by predators.</p>
<p>Animals and plants that are active in twilight are called <b>CREPUSCULAR</b>.</p>		<p>Animals and plants that are active in daytime are called <b>DIURNAL</b>.</p>	<p><b>DIURNAL</b> animals and plants prepare to rest for the night.</p>	<p><b>CREPUSCULAR</b> animals and plants are active again.</p>	<p>Animals that are active at night are called <b>NOCTURNAL</b>.</p>

- Includes fold-out pages throughout
- Cover treatment: matt lam + spot UV + 5th colour

# Tell Me About: The Human Body

## Big science for little readers

- The first in a brand-new series of non-fiction books for readers 4+.
- Written in friendly and engaging language by science educator and CBeebies writer, Emily Dodd.
- Vibrant, eye-catching design and playful illustrations by Chorkung
- Cover finishes: matt lam and spot UV
- CONTENTS: Brilliant body; The skin; Skeleton; Muscles, Brain; Thinking; Nervous system; Eyes; Ears; Mouth and Nose; Digestive System; Blood; Water; Pumping blood; Lungs and breathing; Immune system; Feelings; Helping your body

# Tell Me About: The Human Body

## Brilliant Body

So many amazing things are happening in your body right now! Let's take a look at just a few of them...

As you breathe, spongy bags called lungs are sucking air in and putting it into your blood.

When you run, stretchy cords called muscles pull bones back and forward. Your bones connect together in a structure called a skeleton. And your skin wraps everything up.

Tiny electrical signals are making your heart beat - to-beat-to-beat - to pump blood around your body.

Your body is made from lots of different parts that work together to do important jobs. These parts are called organs.

If you look at the pictures in this book, you're using organs called eyes. And when you think about all of this, you use an organ called the brain.

When you think or laugh or wiggle your toes, you use energy. The energy comes from the food you eat. The food goes into your blood and all around your body.

## The Skin

Let's begin our body tour with your skin. This stretchy waterproof layer wraps around your body keeping germs out and keeping your insides... inside!

Your skin is full of sensors that help you to touch and feel things. You can feel pain and warmth and the tiny footpads of an insect crawling on your arm.

Did you know...? The skin is the biggest organ in the body!

Touch sensors help you to feel how hard to press when you lift it and hold objects - so you don't drop or squash them.

The top layer of your skin is dead! Underneath it, new skin is being made. It pushes the old skin upwards until it flakes off as dust. Yes, your skin becomes dust!

Your hair and nails are made from the same stuff as skin. It's called keratin.

Your skin cools your body too. One way it does this is by making little drops of liquid called sweat.

When sweat drops are warmed by a hot body, they float off into the air taking heat away with them!

## Skeleton

The thing that gives your body its wonderful shape and height is a skeleton. It is made from 206 bones that join together at hinges called joints.

Full your fingers! The bones are the hard parts, and the joints are where your fingers bend.

Strong bony bones called cartilage make up some parts of the skeleton including your ears, your nose and sections of your ribs.

The skeleton protects your insides too. Your ribs make a cage around your lungs and heart and your skull is like a helmet, protecting your brain.

Inside your biggest bones is a juice called marrow. New blood is being made in the marrow. That's right, your bones can make blood!

Bones are full of tiny holes that make them light. But the pattern of the holes makes them really strong too.

## Muscles

Muscles are stretchy cords that pull body parts to make them move. If you wiggle your eyebrows and stick out your tongue, you did it using muscles!

Muscles can pull, but they can't push so they need to work in teams. One muscle pulls a body part one way, and another muscle pulls it back again.

Great teamwork muscles!

1. Bend your arm. The set of muscles at the front of your arm, called triceps, pulled it up by getting shorter.

2. Now straighten your arm. Another set of muscles at the back of your arm, called biceps, pulled your arm down to straighten it.

The muscles that move your bones around are called skeletal muscles. But they're not the only muscles you have!

Cardiac muscles make your heart squash to pump blood.

Smooth muscles line the tubes in your body. They help push things through the tubes.

Did you know...? Muscles help you hold in pee until you're ready to let it go.

# Be Resilient!

### THING-SPRING-O-METER

HOW MUCH BOUNCE IS IN YOUR THING-SPRING?

Show how resilient you already are on this THING-SPRING-O-METER.

Decide how far your THING-SPRING can stretch when you need to do something big, new or a bit scary or difficult!

Colour the THING-SPRING-O-METER to show how high they'd reach right now. The book will show you how to get them to stretch the rest of the way.

### THING-SPRING STRETCHER

It's time to stretch and stretch your THING-SPRING. Are you ready to collect some THING-SPRING points?

Whenever you complete an activity, colour and collect the THING-SPRING points on the page. Then add them to this THING-SPRING STRETCHER by colouring in the number of points you've earned - see how far you can go and become a RESILIENCE SUPERSTAR!

For every THING-SPRING point you earn, colour in one section. If an activity's worth three THING-SPRING points, colour three sections, or if it's worth five THING-SPRING points, colour five sections, and so on. If you repeat an activity, you can collect the points again!

### YOUR HERO TEAM!

Your resilience can't grow super strong and stretchy all by itself. You'll need two heroes around you to build the healthiest THING-SPRING!

The first is your inner HERO TEAM. Your HERO TEAM have their own superpowers and are all important parts of YOU.

Design a colourful costume for each member of your HERO TEAM. Think about their special qualities and try to build them into your design.

You'll be using a lot more of your HERO TEAM and getting to know all about them and their jobs in the following pages. The activities will show you why your HERO TEAM together, so they'll be ready to spring into action to support you whenever your bounce feels a bit flat!

If you are a superhero! or a hero! then draw your HERO TEAM of friends that worry you and soon have them more easily as you go through this book.

Draw yourself using the outline. Now, really imagine yourself confronting that THING. Circle any of the feelings you notice and draw an arrow to where you feel them.

### PICK YOUR OWN SUPPORT SQUAD

Complete this set of SQUAD CARDS to remind you who you can support you as you grow your resilience. Draw their portraits and add their important information onto the cards.

✓ You've got your HERO TEAM organised, so it's go ahead and pick your SUPPORT SQUAD!

✓ Everyone needs a SUPPORT SQUAD to grow healthy THING-SPRINGS!

**TIP** Pick your SUPPORT SQUAD members from your home, family, school, clubs, community and organisations you belong to. Include people and pets and at least one of your favourite toys. Pick team members who are helpful or listening, encouraging, being funny, reassuring, challenging, cheering or comforting you.

Sometimes your resilience gets stretched so far as it can go for now, and that's when you need to ask an adult for help. It can take a little time for you to feel the spring in your step again but it's all there and will bounce back with support.

Remember, you don't have to BE RESILIENT by yourself and it's NOT all your responsibility like your SUPPORT SQUAD!

Now you can bounce around all over this book. How far - you've got that!

Remember to ask your SUPPORT SQUAD for help to team the whole HERO TEAM together, wherever you need to.

Practice means who they are to you, such as friends, teacher and so on.

## WHEN THE GOING GETS TOUGH

What happens to you when you do something that feels big, new, scary or difficult? Perhaps you feel excited, anxious, stressed, nervous, scared, frustrated or angry?

These are called **EMOTIONS**

You might not always know the name of the emotion you're feeling, but it's important to learn to recognise the sensations you feel in your body and where you feel them.

This is called **INTEROCEPTION** (in-ter-o-sep-shun)

When you can identify your body's sensations, you can **BE RESILIENT!** The more you try to recognise your feelings, the easier it becomes to manage and confront them.

Think of a fun THING you'd like to do that's difficult to face or you're worried about. Write it in this box.

Try out for a team or performance

Ask someone to be my friend

Read to the class

Sing a solo

Take a penalty

Take part in a group activity

Hard to swallow or lump in throat

Hot or cold face

Feeling separate from everyone else

Ringing in your ears

Tight chest

Fast breathing

Feeling dizzy, faint or light-headed

Numb or tingly hands

Hot or cold waves

Sweaty palms

Racing or fluttery heart

Trembling or shaking

Needing the toilet

Feeling sick

Numb or tingly feet

Upset tummy

Butterflies in your tummy

Pain in your muscles

Next time you have a challenge to face, come back to this page and go through the activity again to see what body sensations you notice. This will stretch your THING-SPRINGS and change how your brain copes with challenges - you'll soon be fearless! You can also come back any time you need to explain to someone what's happening for you.

THIS ACTIVITY EARNS YOU THREE THING-SPRING POINTS

# The Robin and the Fir Tree

**An exquisitely illustrated retelling of the Hans Christian Andersen story *The Fir Tree*.**

- Helen Ward meets William Morris in a wonderfully illustrated long-form picture book
- A tale of a special friendship between a robin and a tree
- A timeless story about learning to value what you already have
- This reimagined classic makes the perfect Christmas gift
- Matt lam and 100% foil on cover
- Uses a special 5th colour on the interiors.

# The Robin and the Fir Tree

**O**ne day, a tiny robin flew high above the forest, carefully carrying three velvet roses. She glided through the clear sky and disappeared amongst the trees.

**I**n the centre of a clearing, a young fir tree woke up. He yawned, stretched, and stood off his cobweb-lace pyjamas. "What a beautiful morning it is!"

Just then, he saw something fluttering in the blue sky above him.

It was the robin. She swooped through his branches, scattering his pyjamas. Finally, she came to rest on a branch, where she carefully placed the roses. The fir tree smiled.

"Thank you, my little friend! What a beautiful gift! Where did you get such lovely things?"

**F**rom a garden on the edge of the forest, in a greenhouse with dancing raindrops inside, the robin chirped.

"I wish I could see such a place," the fir tree sighed. "I only ever see the green of the clearing and the tiny white flowers that grow here."

The next day the fir tree woke to find the roses withered in the morning sun. Above him, an arrow of green fire sought for the winter. The fir tree wished he could give them and see what they saw.

It was autumn. Many of the trees in the forest had already changed into their gold and orange leaves, but not the fir tree, he was greener than ever. "Every season will be just the same," he said. "There I long for something different to happen!"

**T**he next day, he had his wish. People arrived in a meadow beside the forest and started building strange wooden structures. All the creatures in the forest chatted about the new arrivals, but the most interested of all was the fir tree.

He strained and stretched to peek past the forest's edge, where he saw towers and a wheel being built. He turned to the robin, who often rested on his branches now, and said, "What are those wooden things? Have you seen anything like them before?"

AM  
IMPORTANT

COLOUR YOUR FEELINGS

Do you think feelings have their own colours? Colour in each of these feeling words with the colour that you think suits them best.

ANGER Happy  
Sad FEAR  
Laughter WORRY

YOGA POSE

Try these poses before bedtime or when you want to feel calm.

**TREE POSE**  
Place your feet on your ankles or above your knee and balance. Then change to your other leg.

SAI "I AM BALANCED"

**BUTTERFLY POSE**  
Sit on the ground, press your feet together, and roll your shoulders back.

SAI "I AM SAFE"

**LADYBIRD POSE**  
Bend your knees, roll your shoulders back, and press your hands together.

SAI "I AM HAPPY"

CHILD'S POSE

Bend your legs, fill your body on to your thighs and either rest your arms by your sides or extend them in front of you, whichever feels more comfortable.

SAI "I AM AT REST"

**CAT POSE**

Breathe in and look up, lifting your back drop down. Breathe out and tuck in your chin, lifting your back in a high arch.

SAI "I AM AT EASE"

**SLEEP POSE**

Lie on your back and take slow breaths. Close your eyes if you want. Try to empty yourself of thoughts. If your mind wanders away, notice where it goes, then bring your attention back to your breathing.

SAI "I AM AT HOME"

COLOUR THIS IN

EVERY  
PROBLEM  
HAS AN  
ANSWER

YOUR SAFE PLACE

Draw or stick a picture of somewhere you feel completely safe and happy.

Your safe place could be somewhere you've seen or been to, heard about, read about or dreamt about. A special, safe place where everything feels peaceful, joyful and wonderful.

COLOUR THIS IN

I AM  
LOVED

TAKE A BREATH!

Try this breathing exercise to help you relax:

**STEP 1**

Make sure you are sitting comfortably in a quiet and safe place. When you feel ready, close your eyes. Notice your breathing. Think about how it feels breathing in and breathing out. Try to breathe in through your nose and out through your mouth.

**STEP 2**

Place your hand on your tummy and focus on the feeling of your stomach rising and falling with each breath. When you breathe in, quietly say 'in' to yourself, and when you breathe out, quietly say 'and out' to yourself.

**STEP 3**

Concentrate on nothing but your breathing and try to let go of any other thoughts you may have.

When you've had lots of practice at the breathing exercise, see if you can think about a happy memory at the same time. This way, your happy memory will take up all the space in your brain, and there won't be any room for the worries.

# Made for Each Other

**Marvel at the wonders of nature in this book that explores symbiotic relationships between organisms.**

- Breathtaking watercolour artwork by new talent Georgina Taylor
- A classic BPP offering that draws comparisons to Katie Scott and the bestselling Welcome to the Museum series
- A poignant message about the benefits of working together
- Four sections: Sea, Forest, Savannah and Jungle
- 100% gold foil + arlin cover treatment adds to the luxe feeling of this title

# Made for Each Other

## Aldabra Giant Tortoises & Seychelles Magpie Robins

**F**ounded in the tropical Indian Ocean, the Aldabra Giant Tortoises are a collection of 15 species that have survived on the remote island of Aldabra. They are the only tortoises that still call the island home, some of which are found nowhere else in the world.

The Seychelles Magpie Robin is a species that has become extinct on the main island of Seychelles. It is now only found on the remote island of Aldabra, where it is protected by the Seychelles National Trust.

## Marine Iguanas & Sally Lightfoot Crabs

**B**orned by volcanic activity, marine iguanas and Sally Lightfoot crabs are found on the rocky shores of the Galapagos Islands. Marine iguanas are the only lizards that can swim and are known for their ability to forage in the sea. Sally Lightfoot crabs are named after the actress Sally Lightfoot and are known for their ability to climb vertical rock faces.

## Capuchin Monkeys & Balsam Tree Flowers

**W**hite-headed capuchin monkeys are a species of monkey found in the tropical rainforests of Central and South America. They are known for their intelligence and ability to use tools. Balsam tree flowers are a species of flower found in the same regions and are known for their vibrant colors and strong fragrance.

## Ruby-throated Hummingbirds & Cardinal Flowers

**A** glimmer of ruby red streaks across the sky, gone in a flash. Reaching speeds of up to 64 kilometres per hour, the ruby-throated hummingbird (*Archilochus colubris*) moves so quickly it appears as little more than a blur of wings to the human eye. Although it is one of the smallest birds on Earth, it takes a huge amount of energy to keep the hummingbird moving at such pace – and this tiny creature needs to consume almost double its body weight in food each day.

The cardinal flower (*Lobelia cardinalis*) is a favourite source of nectar for the ruby-throated hummingbird. The flower's vibrant red colouring is not only attractive to this little bird, but their deep tubular shape is also perfectly suited for long, slightly

curved beaks. Like two pieces of a jigsaw puzzle, the ruby-throated hummingbird and the cardinal flower are an exact fit.

In fact, cardinal flowers are so well-adapted to suit the feeding habits of ruby-throated hummingbirds, they don't even offer a platform for animals to rest on whilst they feed. The hummingbirds don't need one – they can hover in the air. Their wings beat at unimaginable speeds of 40 to 80 times per second, producing their distinctive 'hum'. In return for food, the hummingbirds pollinate the cardinal flowers. Because of the symbiotic adaption of these flowers, the ruby-throated hummingbird and the cardinal flower have become almost entirely dependent on each other for survival.

# Hello Happy! Mindful Kids

**Children can colour and doodle their way to happiness, calm and confidence.**

- *Mindful Kids* is an activity book series designed and written for children about emotions and feelings.
- Includes an introduction to the book, and notes for grown-ups by consultant Dr Sharie Coombes, Child & Family Psychotherapist.
- Use creativity to combat negative feelings, work out worries and put anger back in its place with the writing and doodling activities.
- Combined, the *Mindful Kids* series has sold 1 millions copies worldwide (as of July 2022)

# Hello Happy! Mindful Kids

**I'M FEELING KINDA...**

How are you feeling? Whether you're happy, sad or full of joy, it's okay. All emotions are okay - which is a good thing as we have loads of them!

Circle a one and draw the expression to fit the emotion or add the emotion to fit the expression.

IM FEELING Happy

IM FEELING Sad

IM FEELING

embarrassed  
shocked  
frustrated  
angry shy  
scared  
lonely tired  
anxious

IM FEELING

IM FEELING

IM FEELING

**BRAIN BREAK!**

To calm your emotions and feelings you need to spend your time. To do this you need to give your brain a break by switching off from the every day things which have caused difficulty on your head.

The first thing to do is to get rid of the noise around you and learn to be alone. It may feel uncomfortable at first, but here's what you need to do:

- Turn off the TV
- Turn off any video games
- Turn off any radio or stereo
- Put smart technology, phones, tablets etc away
- Close windows to the outside world so you can't hear car engines and sirens
- Take yourself away from people talking

Once you've done this...

Sit still in a comfortable position, close your eyes and concentrate on breathing in and out, in and out.

Now, in this quiet calm state ask yourself how you are feeling.

See yourself the chance to recognize any underlying feelings of anger, sadness, worry or anxiety and give yourself permission to feel that feeling.

For example say:

"I am feeling SAD. I feel SAD because I had a bad day at school. I will not always feel SAD, but right now I feel SAD and that's OK."

Repeat the sentence 5 times.

**FEELING FEELINGS**

Sometimes your feelings don't want to stay inside. Sometimes they want to JUMP AND TALK OUT.

Write where and how you feel when you're sad on this dummy.

Write where and how you feel when you're angry on this dummy.

**MY BEATING HEART**

Take some time to get to know your heart rate. Take your pulse by holding the two fingers nearest your thumb to your neck or to the underside of your wrist.

**TRY TAKING YOUR PULSE WHEN YOU HAVE...**

- JUST WOKEN UP
- RUN ON THE SPOT FOR 3 MINUTES
- HAD A ROW WITH SOMEONE
- EATEN A BIG MEAL
- JUST BEGUN A PIECE OF HOMEWORK
- READ A CHAPTER OF A BOOK
- BEEN FOR A WALK

Write down the beats per minute for each of these.

**REMEMBER!** Anger can be positive. Many people have made good changes in the world because they felt so angry about something they used the anger to spur them on to positive action. What makes you angry in the world? How could you make a difference?

**DID YOU KNOW?** Your heart rate will also increase when you are stressed or afraid.

**THE ANGER ICEBERG**

Anger never exists on its own - there are always underlying emotions causing it. Add more emotions to the underwater part of the iceberg to show the other emotions which might lead to you feeling angry.

# How Many Ways Can You Cook An Egg?

## Apple and Sultana Pancakes with Cinnamon Butter

**MAKES 8 PANCAKES**  
 1 cup (250 ml) plain flour  
 1 egg  
 1/2 cup (125 ml) milk  
 1/2 cup (125 ml) sultanas  
 1/2 cup (125 ml) raisins  
 1/2 cup (125 ml) sugar  
 1/2 cup (125 ml) butter, melted  
 1/2 cup (125 ml) cinnamon  
 1/2 cup (125 ml) vanilla extract  
 1/2 cup (125 ml) salt

These warm, fluffy pancakes are not only great with apples, but you can also mix them with other fruits to match the season. Puffed pancakes, baked overnight, become a natural choice with sultanas – once you know the texture of these sultanas is possible, you can really branch out. Experiment with different types in the future too, like raisins or ground ginger.

1. In a bowl, mix the flour, sugar, cinnamon, and salt.
2. In another bowl, whisk the egg, milk, and melted butter.
3. Pour the wet ingredients into the dry ingredients and mix well.
4. Add the sultanas and raisins to the batter.
5. Heat a large pan over a medium heat.
6. Spoon a ladle of batter into the pan.
7. Cook for 2-3 minutes on each side.
8. Repeat until all the batter is used.

## Apple, Onion and Sage Relish

**MAKES A LITTLE BIT OF RELISH**  
 1 medium onion, finely chopped  
 1 medium apple, finely chopped  
 1/2 cup (125 ml) vinegar  
 1/2 cup (125 ml) sugar  
 1/2 cup (125 ml) oil  
 1/2 cup (125 ml) salt  
 1/2 cup (125 ml) sage leaves, finely chopped

The character of the Granny Smith apple is perfect for accompanying rich flavours, such as cheese, nuts, sausage and meat. This relish, which can be served with bread, sandwiches and more, is a great accompaniment to a hot meal. The relish can also be cooked 'just enough' with the apple, so you can use it as a condiment for a hot meal. The relish can also be cooked 'just enough' with the apple, so you can use it as a condiment for a hot meal.

1. Add the onion to a bowl.
2. Add the apple to the bowl.
3. Add the vinegar, sugar, oil, and salt.
4. Add the sage leaves to the bowl.
5. Mix everything together.

## SWEETCORN FRITTERS

**MAKES 10 FRITTERS**  
 1 cup (250 ml) plain flour  
 1 egg  
 1/2 cup (125 ml) milk  
 1/2 cup (125 ml) sugar  
 1/2 cup (125 ml) butter, melted  
 1/2 cup (125 ml) vanilla extract  
 1/2 cup (125 ml) salt  
 1/2 cup (125 ml) sweetcorn kernels

Get ready for a bit of fun in the kitchen! They are super adaptable and you can try many many variations to get the combination you like. For example, swap potato for sweetcorn if you're not keen, or add a sliced apple if you feel like you need some heat during your cooking. Since the sweetcorn can be replaced, ground almonds, sweet potato or banana would work well here too. Through the same steps, you can make a lovely healthy meal with a variety of fruits.

1. In a large mixing bowl, add the flour, sugar, and salt.
2. In another bowl, whisk the egg, milk, and melted butter.
3. Pour the wet ingredients into the dry ingredients and mix well.
4. Add the sweetcorn kernels to the batter.
5. Heat a large pan over a medium heat.
6. Spoon a ladle of batter into the pan.
7. Cook for 2-3 minutes on each side.
8. Repeat until all the batter is used.

## MEXICAN STREET CORN

**MAKES 10 CORN COPS**  
 10 ears of corn  
 1/2 cup (125 ml) oil  
 1/2 cup (125 ml) sugar  
 1/2 cup (125 ml) salt  
 1/2 cup (125 ml) chili powder  
 1/2 cup (125 ml) cumin  
 1/2 cup (125 ml) paprika  
 1/2 cup (125 ml) onion powder  
 1/2 cup (125 ml) garlic powder  
 1/2 cup (125 ml) lime juice

This is a wonderful way to eat corn – really, once you know how to cook it. It's a bit of a challenge, but once you know the technique, it's really not that hard. The key is to get the corn cooked properly, so it's soft and juicy. Then, you can add the seasonings and the sauce. The result is a delicious, healthy snack that's perfect for a hot day.

1. Boil the corn for 10 minutes.
2. Drain the corn and let it cool.
3. Mix the oil, sugar, salt, and spices in a bowl.
4. Brush the sauce onto the corn.
5. Grill the corn for 5 minutes.
6. Add the lime juice.

## All About Apples

Although some apples are in season all year round, many of them are at their best when the leaves on the trees start to turn brown and the temperature cools. Crunchy, shiny, crisp, juicy apples make a welcome change to the often heavy, warming food of the colder months. But apples baked into pies and puddings are soft and comforting and are a delicious way to greet the autumn season.

Experiment with combining a couple of different apples when cooking for more interesting flavours. If you're able, shopping at loose-pick green-grocers means you can buy a wider variety.

**MOST TART**  
 Bramley, Granny Smith

**MOST SWEET**  
 Royal Gala, Golden Delicious

Other varieties shown: Pink Lady, Red Prince, Jazz, Egremont Pippin, Cook, Braeburn.

To get the best from your apples when cooking, you need to get to grips with their individual flavours and textures. Hard, dense Bramley or Braeburn apples hold on to their juices well, so they are best suited to chopping and cooking until soft. Perky Cox or Gala apples are sweet and fragrant, so they are great for snacking on, or adding raw to salads or binczar muesli.

- The perfect gift for dog lovers big and small
- Beautiful cover treatments including foil and ribbon
- Humorous and engaging text written by dog expert Nicola Jane Swinney

### Basenji

**I**n the native Africa, the Basenji is known as 'the dog that doesn't bark'. While many dogs are often said to be 'sage to please', that just doesn't apply to this one. It is lively, imaginative and playful, but it does have a children's streak. The Basenji will usually leave when you want to touch it, but whether it will obey your commands depends entirely on its mood. That impertinent mind can be a problem, too, as anything you have lying around is likely to be investigated by your Basenji – usually by means of chewing. All that said, the Basenji makes a lovely pet as it adores people and playtime.

Life Expectancy 12-15 years | Height 45-50cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

### Tibetan Mastiff

**I**f you look like a giant teddy bear but this mighty mastiff is not the dog for everyone. While it has a gentle and loving nature, its sheer size can be a bit off-putting, and it is strong-willed. The Tibetan Mastiff sees itself as an equal, rather than a pet, and can be very stubborn. It is thought these amazing dogs lived in Tibet thousands of years ago and were used as guards (not many people would stand up to a 60kg dog) for monks, known as 'lamas'. This is where they developed their thick coat to cope with the harsh climate.

Life Expectancy 10-14 years | Height 60-70cm | Trainability Good for children | Grooming Needs brushing but doesn't shed much | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say Can I sit on your lap?

### Shiba Inu

**T**he resident of its dog breeds native to Japan, the Shiba Inu greets the world with quiet dignity. But it's like a little single warrior, moving quickly and nimbly. The Japanese have three words to describe this breed, *harae* (upright backbone), *oyasoi* (good nature) and *ishiki* (stoicism). It also tends to be possessive – like a nooky toddler, the Shiba Inu doesn't like to share and if it could spare, it's first word would be 'mine'. It's also a natural hunter, so if you let it off the lead while out on a walk, it will probably disappear in the direction of the nearest squirrel.

Life Expectancy 12-15 years | Height 35-40cm | Trainability It has a stubborn streak | Grooming Very little | Exercise Needs to play | Most likely to say Please don't | Least likely to say I'll be on your side

### Parash Hound

**T**his elegant hound was developed to hunt gazelle with pharaohs in ancient Egypt, more than 4,000 years ago. Despite its noble past, the Parash loves people and simply loves life. It's a natural clown – you can even teach a Parash to 'roll' and it's possibly the only breed that can blink – when it's happy or content, its nose and ears will turn a deeper shade of pink. But as a hunting hound, it has a strong prey drive and is likely to chase anything it sees, so keep it on the lead at all times.

Life Expectancy 12-15 years | Height 50-60cm | Trainability Easy | Grooming Very little | Exercise Needs to play | Most likely to say Please don't | Least likely to say I'll be on your side

### Saluki

**P**raised by the travelling people of the Middle East, this ancient breed is thought to take its name from the Arabian city of Sals. To the Greeks, it was a noble dog indeed and they kept precise records of breeding and hunting prowess. They hunted hare, fox and gazelle from horseback, so their heads had to be fast of foot. There were once two different types of Saluki – short and mountain – but the two have merged into the modern breed. It has, however, retained its beauty and some of its speed, so be prepared to do a lot of jogging...

Life Expectancy 12-15 years | Height 50-70cm | Trainability Average but impatient | Grooming Weekly brushing | Exercise Vigorous walks | Most likely to say I'll be on your side | Least likely to say I'll be on your side

### Alaskan Malamute

**T**his impressive breed is one of the oldest in the world and has changed very little, still resembling its wolf ancestors. It was used by the Mahomet people to pull sleds and hunt seals. It is a strong and imposing animal, but it isn't much use as a watchdog – Malamutes regard everyone they meet as friends. They rarely bark, but make a charming 'woo-woo' noise. They're intelligent too, which means they can easily get bored – and a bored Malamute is trouble in waiting. They love to dig holes in the garden, or sniff across the kitchen counters for something tasty, so keep them busy!

Life Expectancy 10-12 years | Height 60-70cm | Trainability They can be quite stubborn | Grooming Lots | Exercise Needs to play | Most likely to say Please don't | Least likely to say I'll be on your side

### Tibetan Spaniel

**T**his little dog likes to climb! Almost cat-like, it will try to find the highest perch from which it can watch over everyone and everything. Resembling a small lion (a powerful symbol in Tibet), it was highly prized as a watchdog. This watchful quality has been bred into the Tibetan Spaniel for thousands of years and it takes its role very seriously – don't even think about farting and blaming it on someone else in its presence! But don't expect your dog to be happy on its own. Tibetan Spaniels like company and get bored quickly – left to themselves they are likely to bark.

Life Expectancy 12-15 years | Height 25cm | Trainability Learns quickly if it wants to | Grooming Weekly brushing | Exercise An occasional walk | Most likely to say I can get up there | Least likely to say No, I'm fine, you go off and leave me all alone...

### Afghan Hound

**W**ith its slender, exotic face, long silky hair and lithe body, the Afghan Hound is surely the supermodel of the dog world. And as well as being one of the most beautiful breeds in the world, the Afghan is possibly the oldest. It comes from Afghanistan, where it was known as the Tazi, and was used to hunt dangerous animals, such as leopards. It was not only brave, but also extremely fast, capable of running at speed for many kilometres. Its independent nature means it does like attention, but on its own terms.

Life Expectancy 10-12 years | Height 60-66cm | Trainability This independent mind can be challenging | Grooming Lots of brushing | Exercise It needs plenty of room to move | Most likely to say Look how beautiful I am! | Least likely to say Give me a cuddle

# A Shelter for Sadness

**A poignant and heartwarming picture book exploring the nature of sadness.**

- Over 22,000 copies sold worldwide (as of July 2022)
- A poignant and heartwarming text addressing the hugely important and topical issue of sadness and depression
- Dealing with abstract emotions in an approachable and child-friendly way
- Anne Booth is known for the exceptional warmth and authenticity of her writing. She was inspired to write this book by the words of Etty Hillesum, a Holocaust victim.
- With superb illustrations from multi-award winning David Litchfield, who has sensitively visualized the nature of Sadness

# A Shelter for Sadness

The shelter I will build for my Sadness will have light from the sun or from the moon and stars.

But the windows will have curtains that Sadness can draw when it wants to. And there will be candles or lamps if Sadness needs them.

# Talking History

## 150 years of world-changing speeches

- An accessible look at political and social history, and issues that remain pertinent today
- Contemporary design and illustrations from André Ducci accompany engaging text
- Authors are experienced children's writers and academics with expert knowledge on the topics discussed. In 2021, Joan Haig was selected as one of prestigious Scottish Book Trust's authors in residence, working with a school in Aberdeen
- Sample contents: Abraham Lincoln, 'The Gettysburg Address', 1863; Jawaharlal Nehru, 'A Tryst with Destiny', 1947; Nelson Mandela, 'Speech from the Dock', 1964; Harvey Milk, 'The Hope Speech', 1978; Angela Merkel, 'Address to 68th Session of the WHO', 2015 and Severn Cullis-Suzuki, 'Listen to the Children', 1992,

# Talking History

In 1903, in the city of Manchester, UK, Emmeline Pankhurst and her eldest daughter Christabel founded the Women's Social and Political Union (WSPU). The organisation campaigned fearlessly for women's right to vote.

**THE SUFFRAGETTE MOVEMENT**

This wasn't the first time that women in Britain had fought for the vote. Since the mid-nineteenth century, female campaigners called 'suffragists' had tried to win rights for women in society through peaceful petitions and, later on, by refusing to pay their taxes.

But this campaign was slow with few results. After years of unsuccessful peaceful protest by the suffragists, the WSPU decided that it was time for action - 'Deeds Not Words', as their motto said. Members of the WSPU took part in 'civil disobedience' to literally fight for their cause. They chained themselves to railings, heckled politicians, placed bombs in empty buildings, and smashed windows in public places, constantly clashing with the authorities. They were so determined to achieve their political aims that they deliberately took part in violence and vandalism to influence the public and the government.

Newspapers began referring to militant WSPU campaigners as 'suffragettes'. By 1910, the WSPU had branches all over the country.

**THE CAT AND MOUSE ACT**

Around 1,000 suffragettes were imprisoned for their 'substance' behaviour. While in jail, some continued to fight by going on hunger strikes, refusing to eat or drink. At first, they were released to prevent them from starving, but, by 1910, prison wardens began to force feed them. Women were badly hurt, prompting public outrage at what was seen as government torture.

The government responded by passing the 1913 'Prisoners' (Temporary Discharge for Ill Health) Act. Under this new law, when women on hunger strike became critically weak, they were sent home. As soon as they recovered, they were promptly returned to continue their sentence. It was dubbed the 'Cat and Mouse Act' because of the way a cat plays with its prey repeatedly letting it escape before catching it again.

Emmeline Pankhurst was imprisoned and released 16 times! It was in 1913, in between prison sentences, that she visited the United States to campaign for support and funding. She addressed a group of women at the Parsons Theatre in Hartford, Connecticut, in a powerful speech attempting to justify the use of militant tactics in the fight for women's rights.
