Small Worlds: Earth

This beautiful lift-the-flap book lets children explore small worlds in nature close-up.

- A nature series illustrated by Lara Hawthorne, author and illustrator of *The Night Flower* and *Alba the Hundred Year Old Fish*
- a hands-on exploration of how small areas in the natural world act as habitats to a wide range of plant and animal life.
- Part of a two book series which includes *Small Worlds Earth* and *Small Worlds Water*.
- More than 70 flaps inside
- Lara Hawthorne was nominated for the CILIP Kate Greenaway Award and shortlisted the AOI's World Illustration Award for *The Night Flower*.

The Great Pollination Investigation

A pollination investigation!

- A fun narrative story packed with facts, including information on the pollination process, flower anatomy, animal pollinators, fertilisation, fruits and vegetables
- Covers scientific information that supports the curriculum
- Flaps on every spread help readers engage with the information
- Carry out your very own Pollination Investigation with the project at the back of the book - complete with a pollination wand to tickle your flowers!
- Checked by the experts at the Royal Botanic Gardens Kew
- Cover treatment: Matt lam and Spot UV

Prehistoric Beasts

Discover Pop-up Prehistoric Animals

- *Prehistoric Pets* (2020) was shortlisted for ASE Book of the Year 2021.
- Features 7 wild animals and their fascinating animal ancestors
- CONTENTS: Dragonfly / *Meganeura* 305-299 mya (before dinosaurs!); Great White Shark / *Megolodon* 16-3.6 mya ago; African elephant / Woolly Mammoth 400,000-4,000 ya; American Alligator / *Deinosuchus* 82-75 mya; Emperor penguin / *Icadytes* 36 mya; Sloth / *Megatherium* 100,000-10,000 ya; Blue whale / *Pakicetus* 50-45 mya
- Dean is a palaeontologist, as well as a science communicator, author of *Dinosaurs of the British Isles* and expert presenter on ITV's *Dinosaur Britain*. He has discovered 6 new species, including a Velociraptor-like dinosaur.
- Fold-out pages reveal pop-up prehistoric animals that 'jump' out of the page

All The Way Down: Ocean

An ingenious exploration of our oceans

- An innovative information book that allows children to dive into the ocean depths and discover what life resides at each level.
- Part of the All the Way Down series that takes a 'look down' approach at different ecosystems, from the organisms that reside near its top to the creatures that dwell near the bottom.
- Engaging STEM non-fiction book for children 7-9 years old and aspiring scientists.

All The Way Down: Amazon Rainforest

An ingenious exploration of our rainforests

- Each spread features colourful and eye-catching illustrations of different animal and plant species, plus easy-to-digest, bite-sized facts.
- Part of the All the Way Down series that takes a 'look down' approach at different ecosystems, from the animals that swoop across the tallest trees to the creatures that dwell near the bottom.
- Engaging STEM non-fiction book for aspiring conservationists and scientists aged 7-9 years old.

All The Way Down: Amazon Rainforest

HIGH FLYERS

THE EMERGENT LAYER OF THE AMAZON RAINFOREST IS HOME TO MANY SPECIES OF BIRDS. AT THIS LEVEL, THEY HAVE PLENTY OF SPACE TO ROAM THE FOREST, SWOOPING TO FEED ON PREY OR VEGETATION, AND THEIR NESTS ARE LESS VULNERABLE TO PREDATORS THAN THEY WOULD BE LOWER DOWN. THE APEX PREDATORS OF THIS LAYER ARE THE HARPY EAGLE AND THE WHITE-TAILED HAWK.

- 1 WHITE-TAILED HAWK** This bird of prey likes to hunt in the emergent layer, where there are fewer trees than below to hinder its flight. It hovers in its site, scanning its surroundings, before swooping for its prey. It eats small mammals and reptiles, as well as birds and insects.
- 2 SCARLET MACAW** These large, colourful parrots live in the emergent layer and upper canopy. Here they have the space to fly at speeds of up to 56 km/h (35 mph). They mostly fly alone or in pairs, but sometimes as a flock. They feed on fruits and seeds.
- 3 HARPY EAGLE** These huge, fearsome raptors have wingspans of up to 2 m (6.6 feet), and 13-cm (5 inch) claws - longer than a grizzly bear's. They soar high up in kapok trees and prey on sloths and monkeys, in addition to other mammals, reptiles and birds.
- 4 KING VULTURE** These large scavenging birds have very sharp eyesight. They perch in the topmost branches of the emergent layer and search for carrion (animal remains) below. If they see any, they swoop down in groups of up to twelve and push other scavengers aside to get at the food.
- 5 HUMMINGBIRD** This family of birds are amazing flyers. They can hover in mid-air, fly backwards and even upside down. Beating their wings at up to a 1000 times a second, they dart from flower to flower among the treetops of the emergent layer, drinking nectar and eating insects.
- 6 BLACK-AND-WHITE OWL** This bird of prey hunts at night for large insects, as well as bats, rodents, birds and tree frogs. It builds its nest in the emergent layer to protect its eggs and chicks from climbing predators.

All The Way Down: Dinosaurs and Other Prehistoric Creatures

An ingenious exploration of the dinosaurs!

- An innovative information book that allows children to travel back in time to the time when dinosaurs ruled, discovering what life resides at each level.
- Special material includes a ruler running down the side of each spread keep track of the different depths.
- Engaging STEM-focused non-fiction book for dinosaur lovers aged 7-8 years old.

All The Way Down: Dinosaurs and Other Prehistoric Creatures

ON THE GROUND — HERBIVORES

THE FIRST DINOSAURS APPEARED AROUND 230 MILLION YEARS AGO. THEY WERE SMALL CREATURES DARTING AROUND ON THEIR HANDS. LESS THE DINOSAURS FORMED TWO MAIN GROUPS: THE SAGRISCHIA (LIZARD-HIPPED) AND THE ORNITHISCHIA (BIRD-HIPPED). BIRD-HIPPED DINOSAURS WERE MOSTLY PLANT-EATERS. LIZARD-HIPPED DINOSAURS INCLUDED BOTH MEAT-EATERS AND PLANT-EATERS.

- 1. HYPERODAPEDON (LIVED: 231–227 MYA)**
This weird-looking animal is a kind of stegosaurid – a beaked reptile related to the dinosaurs. It had a scaly body and moved slowly, using its beak to cut through tough plants.
- 2. PISANGSAURUS (LIVED: 226–216 MYA)**
This small, lightly built plant-eater weighed less than 10 kg (22 lb). It had strong hind legs and could run away quickly if a predator came near. We don't know if it was a true dinosaur or a close cousin.
- 3. AETOSAURUS (LIVED: 228–209 MYA)**
This small, slow-moving, plant-eating archosaur had a long, slender body and short arms. Four rows of thick, bony plates covered its body, providing good protection against predators.
- 4. MUSSAURUS (LIVED: 215 MYA)**
Mussaurus got its name because the first fossils discovered were tiny. We now know these were infants. It was a sauropodomorph dinosaur – a bipedal ancestor of the giant sauropods that walked on all fours.
- 5. PLATEOSAURUS (LIVED: 214–204 MYA)**
Plateosaurus was one of the biggest dinosaurs of the Triassic and another sauropodomorph. It had a small head on a long, flexible neck, short but muscular arms with large claws on its three fingers, and powerful hind legs.
- 6. ASYLOSOSAURUS (LIVED: 208–201 MYA)**
Asylosaurus was one of the last sauropodomorph dinosaurs to walk on its hind legs. Its close cousins, the sauropods, all walked on four legs.

Paper World: Dinosaurs

A one-of-a-kind paper-cut book all about dinosaurs

- The *Paper World* series has sold over 220,000 copies worldwide
- Contents: Before the Dinosaurs; Triassic; Triassic Oceans; Jurassic; Jurassic Skies; Cretaceous Variety; Cretaceous Giants; The End of the Dinosaurs; How Fossils Form; Studying Fossils; Glossary
- Vibrant paper-cut artwork by award-winning British artist Gail Armstrong
- Deep die-cuts and integrated flaps on every spread
- A fact-packed text reveals fascinating facts about dinosaurs and other prehistoric life - fact-checked by Education Officer at the Oxford Museum of Natural History, Chris Jarvis
- Striking cover design with a large die-cut through the cover and title page

Up in the Canopy

Explore the jungle layer by layer with a huge fold-out surprise at the end.

- James Aldred's book *The Goshawk Summer* won the 2022 James Cropper Wainwright Prize for Nature Writing.
- Written from the perspective of real-life Emmy-nominated cameraman and explorer, James Aldred
- Stunningly illustrated - with artwork as rich and dense as the rainforest itself
- Huge fold-out tree at the back of the book, which readers can pore over.
- Matt lam and spot UV finishes.

An exploration of rivers with fold-out pages

- A stunning look at geography, exploring the physical features of rivers, the unique wildlife they support and how they have shaped human history.
- Featuring 6 mighty rivers from around the world, one from each continent
- CONTENTS: A World of Rivers; Where do rivers get their water?; Source; Heading Downhill; Waterfalls; Underground Rivers; Gorges; Rapids; Dams; The Danube; Around the Bend; River Life; River Highway; The Ganges; Making Lakes; The Amazon; River City; The Murray; Extraordinary Rivers; Floating Islands of the Sudd; The Nile; Deltas; Estuaries; The Mississippi; Mangroves; Salmon Run
- Includes fold-out pages throughout
- Cover treatment: matt lam + spot UV + 5th colour

Water

Water is the most abundant substance on Earth. It covers about 70% of the planet's surface. Without it, life as we know it would not exist.

WHAT IS WATER?

Each molecule of water (H₂O) contains two hydrogen atoms and one oxygen atom. These molecules are always joined together and they flow together as a liquid.

Water is HOT!
One cubic metre weighs one tonne - about the same as a small car! The temperature of the world's oceans, however, never rises above 30°C and never falls below 0°C. It's all just a few degrees away from freezing!

Water is COLD!
Pure water flows at a speed of about 10 metres per second! That's about how fast you can throw a ball when you're a bit of a pro!

Water is FLOWING!
Because it is heavy and so flows mainly towards the sea, it can carry things like silt and sand. It can also carry things like fish and plants. It can even carry things like people!

Mangroves

Mangroves are trees and shrubs that grow in coastal areas with salt water. They have special roots that help them survive in the water. They are found in many parts of the world, including the Amazon, the Ganges, and the Mekong.

NEAR THE COAST ON THE EAST MANGROVE RIVER DELTA IN BORNIO, ASIA, one of the world's largest and most ecologically rich mangrove forests.

It is a mangrove forest like the UK, but with the trees that have special roots that help them survive in the water. They are found in many parts of the world, including the Amazon, the Ganges, and the Mekong.

Some amazing things people can do in mangroves:
- They can be used for timber.
- They can be used for medicine.
- They can be used for food.
- They can be used for fuel.

HEADING UPSTREAM: The Salmon Run

In October at the Adams River in British Columbia, Canada, thousands of salmon are fighting their way upstream against the current to get to the spawning grounds. They have to jump over rocks and swim against the current. It is a very difficult task.

IN OCTOBER AT THE ADAMS RIVER IN BRITISH COLUMBIA, CANADA, thousands of salmon are fighting their way upstream against the current to get to the spawning grounds. They have to jump over rocks and swim against the current. It is a very difficult task.

They have to jump over rocks and swim against the current. It is a very difficult task. They have to jump over rocks and swim against the current. It is a very difficult task.

GORGES: The Grand Canyon

The most famous gorge in the world, the Grand Canyon winds its way through the semi-desert of the Southwestern United States. It is 1,600 metres deep and over 400 kilometres long, carved by the Colorado River. The Paiute people of the Great Basin Desert area call it the *Maibab*, which means 'the mountain turned upside down'. But the Colorado is no great Mississippi or Amazon. It is only 100 metres wide on average as it passes between the canyon's rock walls. So how did it cut so deeply into the earth?

The River Colorado is only 25 metres wide at its narrowest point in the Grand Canyon. That's about the length of a town swimming pool. But at this point, the river is also at its deepest - 25 metres.

Gorges are formed by waterfalls eroding backwards, caverns collapsing or by the sheer force of the water eroding through rock, and this takes time. Six million years in the case of the Grand Canyon!

The sedimentary rock that the Colorado River flows over is made of compacted sand and mud that was once on the bottom of the sea. This seabed was raised higher by the same earth movements that raised the land to form the nearby Rocky Mountains.

For most of the year the Colorado hardly touches the rock beneath it. Virtually all of its downward cutting happens when snow in the Rockies melts each spring, swelling the river to many times its usual size.

Carrying 500,000 tons of tiny broken rock pieces, the floodwaters of the Colorado act like sandpaper, widening the riverbed deeper and washing away the valley sides.

Water erodes hard and soft rock away at different rates, which has created the Grand Canyon's distinctive steps.

Swirling currents can cause rocks, pebbles and sediment to erode circular hollows called potholes in the riverbed.

"A PERFECT HELL OF WAVES"
The Colorado River was first explored in 1859 by a 10-man expedition led by geologist Colonel John Wesley Powell. They set off in four wooden rowing boats, not knowing what they would discover. Over three months and 1500 kilometres they encountered hundreds of rapids, one of which they described as 'a perfect hell of waves'. After one of the boats was smashed to pieces, three of the team deserted to take their chances in the desert. They were never seen again. The three remaining boats made it through the canyon and Colonel Powell became famous for his achievement. Powell took another expedition through the Canyon in 1871, this time with cameras and equipment to map the river's course.
