The Little Gardener's Handbook

A vibrant introduction to gardening.

- A vibrant first introduction to gardening for ages 6+
- Includes DIY activities to try at home.
- Text by expert ecologist and educator, Michael Holland.
- Colourful, charming artwork by illustrator Maria Dek.
- Expanding the younger side of the Big Picture Press list.
- Gardening is a subject only growing in popularity.
- Arlin quarter binding and matt lam cover finishes.

The Little Gardener's Handbook

ALL ABOUT SOIL

Soil is the brown earth that plants grow in and it plays a very important role in supporting life on our planet. The best way to keep your plants happy is to take care of their soil!

Check a seed has sprouted, the soil helps to anchor the plant's roots in the ground. From here, the roots can absorb water, nutrients and minerals from the soil that help the plant to grow.

Soil is teeming with life. Did you know that there are more living things in a handful of soil than there are humans on earth? Look at all of the living organisms such as worms, fungi, insects and bacteria.

These organisms have special functions. Worms, for example, are little underground diggers. They move soil through the soil's surface. This is called turning over the soil. This helps to bring nutrients and food to the soil.

GET TO KNOW YOUR SOIL

Soil is not just dirt. It's a mix of different things, like sand, silt, clay, moisture and air. As a gardener, it's important to get to know your soil. If a plant is from a warm part of the world and you're growing it in a cool area, it won't be happy! Similarly, a plant from a damp area won't like to grow in a sandy soil.

1. Bring a small jar (one litre/33.8 fl. oz.) of soil to a soil sample from your garden. Cut it in a series of paper, remove any large bits, then using your trowel, scoop the soil out of it in an even layer.
2. Seal, and fill it large with the soil. Then, using your trowel, put the soil in lightly and then give it a good shake. Let the water sit for at least 24 hours to settle.
3. You should now be able to see the different layers of your soil. The amount of soil in different layers and the texture when you touch it, tells you a lot about it. Use what you know to write in a journal about what you see.

GARDEN FOES

Sometimes your garden might be visited by some not so welcome wildlife visitors - including those who through your plants and obtaining seeds of hard work. Rather than using harmful chemical pesticides, there are some natural ways you can discourage any unwanted visitors to your garden.

ENCOURAGE BENEFICIAL ANIMALS

You can encourage beneficial animals by providing them with shelter such as birdhouses, insect hotels, and bug hotels. You can also encourage them by providing a bug hotel or adding a bird bath.

PEST REPELLENTS

To repel insects, you can use natural repellents such as spraying a mixture of water, garlic, onion and chili.

PROTECT PLANTS

Use netting to protect plants from birds and other pests.

KEEP AN EYE OUT FOR PESTS

Check and watch for signs of pest damage. If you see any signs of pest damage, act quickly. You can use natural repellents to help protect your plants.

PLANTS THAT HELP OTHER PLANTS

Some plants can help other plants by providing them with shade, wind protection, and other benefits.

GROW CUPS OF NASTURTIUMS

Did you know that you can eat the petals from certain flowers? Nasturtiums are bright and colourful, and they have a little peppery taste that adds a bit of extra flavour.

YOU WILL NEED:

- Old cups or tins
- Water
- Compost
- Nasturtium seeds
- Water

1. In the bottom of each cup, add a layer of gravel. This is to allow the water to drain away from the roots because the cups do not have any drainage holes.
2. Fill each cup with compost.
3. Place a couple of seeds in the compost and drop in the seeds.
4. Cover with a little extra compost and add water to the compost - remember the water can't drain away so well.
5. After a week or two, the seeds will start to grow. When they are about 5cm tall, give them water. Little and often.
6. In a few more weeks, flowers will appear. You can harvest them whenever you like. If you die on the plant, cut and place them off with a newspaper to give them a place to grow.

WELCOME TO THE WONDERFUL WORLD OF GARDENING!

Whether you have a big garden or a small windowsill, you can make the world a greener place. Gardening is one of the best hobbies in the world and it's good for you, your neighbourhood and our planet! People have been gardening in one way or another for thousands of years, so you will be continuing a very long and important tradition.

In this book, you'll learn about how plants work, how to grow your own vegetables, how to encourage wildlife to your garden and why protecting plants is important for our lovely planet. Along the way, there will be plenty of activities and experiments for you to try for yourself - mostly using everyday materials you can find at home.

What are you waiting for? Let's begin!

A Symphony of Sound

A visual exploration of the science behind sound and music.

- An visually extraordinary take on the subject of sound
- Perfect for primary schools (on KS2 curriculum), but also the ideal gift book for general interest readers
- Engaging text by Trevor Cox - a professor of acoustics and engineering at Salford University.

A Symphony of Sound

HIGH AND LOW

When we sing "Happy Birthday to You," we make the pitch of the musical notes go up and down by raising the voice. Pitch also helps us work out what is making a sound. A mouse makes a high-pitched squeak, while a lion makes a low-pitched roar. Knowing the difference is important for survival, because if it's a lion, it's time to run away!

RICH AND FREQUENCY

Low-pitched sounds are usually made by larger things, and high-pitched sounds by smaller things. For example, a double bass has a low-pitched sound, while a piccolo has a high-pitched sound.

THINGS

As an instrument plays the same note with the same pitch, they sound different because the sound waves are different. For example, a trumpet has a bright, clear sound, while a saxophone has a softer, more mellow sound. This is because the sound waves are different. The trumpet has a higher frequency, while the saxophone has a lower frequency.

DEPARTING WITH FEELING

As we use the same pitch, we can use different sounds to create different feelings. For example, a trumpet has a bright, clear sound, while a saxophone has a softer, more mellow sound. This is because the sound waves are different. The trumpet has a higher frequency, while the saxophone has a lower frequency.

SCIENTIFICALLY SPEAKING

A child typically says its first words when it is between 18 and 24 months old, and by the age of 3, they usually know a thousand different words. Because this happens very naturally for most children, speaking can seem like a very simple skill. In reality, however, speaking is a really challenging thing to do. It is to be expected that the process of learning a language is a hard one.

HOW A VOWEL SOUND IS MADE

When you make a vowel sound, you use the vocal cords in your throat to create a sound. The sound of your voice is created by the vocal cords.

WHY DO SOME PEOPLE HAVE PROBLEMS WITH THEIR OWN VOICES?

Some people have problems with their voices because of the way their vocal cords work. For example, some people have a condition called dysphonia, which means they have difficulty speaking. This can be caused by a variety of factors, including injury to the vocal cords or a neurological condition.

A SOUND WALK

When we're out and about, we're often chatting to friends, sitting in a car, or listening to music on headphones. We see the world around us, but we barely hear it. A sound walk is a simple way to explore what we're missing. Try walking around your neighbourhood in silence and tuning into the different sounds around you. Notice how the sounds change as you move through different areas, and how they make you feel.

Birdsong can help reduce stress and anxiety, and improve focus. How many different birds can you hear?

Jack hammers can damage hearing, so construction workers need to wear hearing protection.

Church bells have been used to summon worshippers for about 1,500 years. They are also used to mark the time of day, and on special occasions.

Notice how the sound of footsteps in a subway changes as they move through the tunnel.

The sound of a street musician can make you want to dance around or roll your eyes, depending on your personal music taste!

HEARING SOUND

Tree branches creak and leaves rustle in the wind. Tree songs change depending on the leaf types and wind speed.

Car noise may be a familiar sound, but over long periods it can create stress and even damage health.

People chatting in a café might make you smile because humans like to socialize and spend time with each other.

Large fountains can help hide unwanted sound, like cars. Small fountains create a soothing, trickling sound that reduces stress.

Depending on who's listening a barking dog can sound friendly or threatening.

Children playing in a park or playground creates sounds of laughter and squealing. It might remind you of some playful memories of your own.

Sound walking was popularised by Canadian composer and environmentalist Murray Schafer in the 1970s. He saw it as a way for people to connect to the sounds around them and become more aware of the problems created by noise pollution.
