- **FUN AS WELL AS EDUCATIONAL:** Introduces new concepts and vocabulary in a simple and accessible way

# Little Explorers: Dinosaurs

### TRIASSIC TIMES

Dinosaurs first appeared on Earth in the Triassic period, which lasted from around 252 to 202 million years ago. At the beginning of the Triassic period the world was a very different place. The continents were joined together in one giant landmass called Pangea, which was surrounded by a vast ocean.

**Prehistoric landscape**  
It was so hot and so dry that most of the plants were conifers and ferns. The plants that grew were strong and tough, and gave the trees their wood.

**Triassic animals**  
Some Triassic dinosaurs were small and fast. One of the first was the bipedal dinosaur *Coelophysis*. It was about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

### GREAT AND SMALL

Although we think of dinosaurs as huge creatures, they weren't all giant monsters. Some of the Triassic dinosaurs were tiny and weighed as little as 100 grams. They were about the size of a mouse.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

**Triassic dinosaurs**  
The first dinosaurs were bipedal. They had two legs and two arms. They were about 1.5 metres long and weighed 15 kilograms.

### DEATH OF THE DINOSAURS

Dinosaurs disappeared from the earth about 65 million years ago. It wasn't just the dinosaurs that disappeared. The giant mammals and birds that also existed at the time disappeared too.

**Volcanic eruptions**  
Some scientists believe that volcanic eruptions in the Deccan region of India caused the dinosaurs to die. The eruptions were so big that they covered the earth in ash and lava.

**Low fossil form**  
A fossil is a preserved part of an organism. The fossil record shows the history of life on earth. The fossil record shows that dinosaurs lived about 65 million years ago.

**Survivors**  
Some animals survived the extinction. These include birds, mammals, and reptiles. The fossil record shows that dinosaurs lived about 65 million years ago.

**Great mystery**  
The death of the dinosaurs is one of the greatest mysteries of the earth. There are many theories about why they died. The most popular theory is that a large asteroid hit the earth.

### MONSTERS OF THE DEEP

Dinosaurs did not live in the sea, but the prehistoric underwater world was teeming with life. There were familiar creatures, such as crabs and jellyfish, but swimming alongside them were some truly terrifying sea reptiles.

**Ichthyosaurus**  
Long and sleek  
Ichthyosaurus was a torpedo-shaped sea reptile that looked like a modern dolphin. It was an amazing swimmer and a skilled hunter.

**Elasmosaurus**  
Ichthyosaurs shared the seas with a marine reptile called *Elasmosaurus*. It had paddle-like flippers and a long neck, and was a slow, graceful swimmer.

**Terrible Crocodile**  
*Deinosuchus* lurked in estuaries. It looked like a giant crocodile, with rows of terrifying teeth. It was big and bad and would take on any dinosaurs that dared to venture near the water's edge!

**Mosasaur**  
Giant killer  
Mosasaurs were a group of fearsome sea reptiles. They had two sets of seriously sharp teeth and a mouth that was wide enough to swallow prey whole. The largest was 10 metres in length – that's as long as a double-decker bus!

# Draw Kawaii: Cute People

Pub Date	13/02/2025
Pub Price	£7.99
ISBN	9781835872727
H x W	246 x 189mm
Binding	Paperback
Age Range	5-7 years
Author	Isobel Lundie
Illustrator	Isobel Lundie
Extent	64pp
Files To Printer	18/10/2024
Freight On Board	15/12/2024
Rights Available	World

# A World of Dinosaurs

Explore a world of dinosaurs in this fact-packed compendium, illustrated by Vicky Woodgate.

- Sample contents: NORTH AMERICA - Tyrannosaurus; Brachiosaurus; SOUTH AMERICA - Herrerasaurus; Gigantosaurus; AFRICA - Spinosaurus; Anglosaurus; ASIA - Velociraptor; Protoceratops; EUROPE - Iguanodon; Plesiosaurus; OCEANIA & ANTARCTICA - Minmi; Kronosaurus
- Features more than 60 species from across the world
- Informative and surprising text from palaeontologist and *Dinosaurium* consultant Jon Tennant
- Vibrantly illustrated by *Urban Jungle* and *A World of Birds* creator Vicky Woodgate

# A World of Dinosaurs

## The Age of Dinosaurs

The first dinosaurs appeared around 230 million years ago. They lived over three major periods in the history of Earth: the Triassic, Jurassic and Cretaceous periods. Together, these form the Mesozoic era, often referred to as the Age of Dinosaurs.

**The Triassic**  
At the beginning of the Triassic, there was the super supercontinent 'Gondwana'. Global temperatures were high and dinosaurs were small. Around three quarters of all plants and animals went extinct.

**The Jurassic**  
The continents continued to move away from each other. Temperature dropped and plants life became more lush and abundant. Dinosaurs grew bigger and bigger.

**The Cretaceous**  
The continents began to look more like their current shape. By now, dinosaurs lived right across the globe - even at the north and south pole. They grew bigger and bigger.

**What is a dinosaur?**  
Dinosaurs were not dinosaurs before them, and in their earliest days, a number of predatory dinosaurs like all crocodile like groups existed, as well as some crocodile like reptiles.

**Extinction**  
By the end of the Mesozoic got around 66 million years ago, a rather small the Earth. Several large kinds of dinosaurs were discovered with large scale volcanic eruptions. This drastically changed temperature around the world. Around three quarters of all plants and animals went extinct.

**Extinct or evolved?**  
While many of the dinosaurs went extinct, some survived the event. They were a general line of dinosaurs - the birds. Able to adapt to the changing environments, they can only escape out of the extinction event, but most do so. However, there have they evolved into the large number of species we can see today.

**Dinosaur timeline**

230 million years ago    200 million years ago    145 million years ago    66 million years ago

Triassic    Jurassic    Cretaceous

## Dinosaurs Today

Most of the dinosaurs we have today have evolved from surviving their extinction. Known as birds. Preserved over millions of years, fossils are usually made up of the hard part of an animal's body, such as its bones. The oldest fossils are about 3.5 billion years old. They comprise the nuclear bases of simple life, similar to bacteria.

**What is a fossil?**  
The process of fossilisation takes many thousands of years to complete. It is a gradual process where the parts of an organism are slowly replaced with harder materials, which are harder than the original flesh. Dinosaurs that turn into fossils are called palaeontologists.

**Fossil hunters**  
Fossil hunters have also discovered fossilised tracks, but not many, usually attached to rocks - and even fossilised DNA. Palaeontologists are now able to examine these fossils with a range of modern high-tech scientific methods.

**Trace fossils**  
The all fossils are the preserved remains of a dead body. Sometimes, we can help and find evidence of what a dinosaur was doing while it was alive. These are called trace fossils, and are useful evidence of dinosaur behaviour. These fossils include egg, footprints and other fossilised faeces (poop).

**Trace fossils**  
Some people understand what dinosaurs were, several thousand years ago. They were not dinosaurs like the original.

**Trace fossils**  
Fossilised bones are known as trace fossils. They are usually preserved in rocks, but not many, usually attached to rocks - and even fossilised DNA. Palaeontologists are now able to examine these fossils with a range of modern high-tech scientific methods.

Fossilised bones are known as trace fossils. They are usually preserved in rocks, but not many, usually attached to rocks - and even fossilised DNA. Palaeontologists are now able to examine these fossils with a range of modern high-tech scientific methods.

**Trace fossils**  
Fossilised bones are known as trace fossils. They are usually preserved in rocks, but not many, usually attached to rocks - and even fossilised DNA. Palaeontologists are now able to examine these fossils with a range of modern high-tech scientific methods.

## North America

Towards the end of the Cretaceous, the supercontinent Pangaea started to break up, and the Atlantic Ocean separated North America from Africa and Europe. At this time, North America had a humid, temperate climate, with many different habitats. Later on, during the Cretaceous period, a shallow inland sea covered much of the middle of North America. The first fossil that shows types of dinosaur evolved on either side of the water.

**Key**

- Eubrontosaurus albertensis
- Spinosaurus
- Ankylosaurus
- Allosaurus fragilis
- Dakotadon
- Tyrannosaurus rex
- Quetzalcoatlus northropi

## Tyrannosaurus rex

Group: Theropod • Period: Cretaceous  
Pronunciation: Tie-ran-oh-saw-rus-eks

Tyrannosaurus rex was perhaps the largest carnivore ever to walk the Earth. It had one of the most powerful bites of any animal, with teeth like steak knives for tearing through flesh and crushing bone. Its name, meaning 'tyrant lizard king', reflects its spot at the top of the food chain in the Cretaceous period.

**A large olfactory bulb (the part of the brain that processes smell) suggests T.rex may have been a scavenger as well as a hunter.**

**Huge head**

**Eyes as big as grapefruits**

**Stiff tail to counterbalance heavy head**

**Teeth as long and thick as bananas**

**T.rex could bite with a force of about 3,500kg - 6 times stronger than a crocodile's bite.**

**Tiny strong arms with two claws**

**Powerful hind legs for sprinting**

**Up to 3.6m**

**Powerful legs for running**

**Salwater crocodile**

## Allosaurus fragilis

Group: Theropod • Period: Jurassic  
Pronunciation: Al-oh-saw-rus fra-jil-is

Often termed the 'wolf of the Jurassic', Allosaurus was among the top predators of its time. Packs of these fearsome hunters would chase after their prey, slowly draining their target of energy before diving in for the kill. Discovered in 1877, Allosaurus was one of the first dinosaur fossils discovered in North America.

**Allosaurus could probably open its jaws very wide, to around 70-90 degrees.**

**Slash & grab**  
Allosaurus probably used its sharp teeth in a 'hooking and slashing' motion, to inflict dozens of smaller wounds on larger prey.

**Crest may have made it look more intimidating**

**More than 70 sharp teeth**

**Fairly long arms, possibly for grabbing prey**

**Stegosaurus**    **Allosaurus**

**Allosaurus specialised in attacking mid-sized prey such as Stegosaurus.**

**Up to 9.6m**

Pub Date	22/07/2021
Pub Price	£15.99
ISBN	9781787415706
H x W	305 x 235mm
Binding	Hardback
Age Range	7-9 years
Author	Jonathan Tennant
Illustrator	Vicky Woodgate
Extent	96pp
Word Count	12500 words
