A Trip to the Future

Take a trip to the future in this one-of-a-kind science book!

- Shortlisted for ASE Book of the Year
- Sample contents: Home Smart Home; T-Shirt, Change Colour!; Braininternet!; Park in the Sky; Bionic Robotic; Supersports; Androids; Recycling Plant; Animal Conservation; Floating Cities; Future Cars; Solar Sails; Space Elevators; Space Hotels; Asteroid Mines; Mars Settlements; Space Garden; Terraforming
- Timely and topical in its coverage of the problems facing our planet: this book explores how humans may be able to reverse water shortages, pollution and climate change
- Concise text, written in consultation with experts from a range of fields.
- Illustrations by collective Fago Studio evoke classic comics with a futuristic touch!

The Stardust That Made Us

**A visual exploration
of chemistry,
following from *The
Speed of Starlight*
and *The Language of
the Universe*.**

- Sample contents: Elements Basics/ Mendeleev/Organising the Elements/ The Big Bang/ Dying Stars/Transition Metals/Halogens/Noble Gases/ Pioneering Women Commendable Men/ Ytterby/The Human Body/Element 119 and Beyond
- Focus on popular STEM subject
- Written by highly acclaimed science author and Fellow of the Royal Astronomical Society, Colin Stuart
- In recognition of Colin's efforts to popularise astronomy, the asteroid (15347) Colinstuart is named after him
- Incredible surrealist artwork by Ximo Abadía helps to visualise difficult topics

The Extraordinary Elements

This lively periodic table book presents the extraordinary elements as you've never seen them before.

- Easy-to-access, visual information
- Fun characters help commit scientific facts to memory
- Lightweight and pocket-sized - ideal portable format
- Perfect for KS3 students or general interest readers
- Matt lam, 100% spot UV and deboss cover treatments

Art of Protest

Discover the power of words, images and much more in this analytical and thought-provoking look at protest art.

- Stunning artwork by contemporary artists around the world
- As told by TED talker, activist, lecturer and artist De Nichols
- De's *Mirror Casket* project was commended by legendary activist Angela Davis in Smithsonian Magazine.
- **WINNER OF THE BRITISH BOOK DESIGN & PRODUCTION AWARDS IN THE CHILDREN'S TRADE 9 TO 16 CATEGORY!**
- **WINNER OF THE 2023 BOLOGNA RAGAZZI AWARD!**
- Uncoated and fluoro pantone cover treatments with flaps.

World of Sport

In this beautifully illustrated book, learn about the incredible variety of sports that are played around the world.

- A lively, inspiring and fact-filled exploration of a globally unifying topic: sport! From ancient times to today, covering every corner of the world.
- Featuring extensive coverage of women's sports and sporting heroes, plus sports from different, lesser-known regions and cultures around the world.
- Positioned to publish in time for the 2024 Olympic Games.
- With vibrant, energetic illustrations from Violeta Noy, author and illustrator of *The Right One*.

Art is Everywhere

A playful introduction to art history.

- Growing demand for children's art books that aren't biography or activity
- Fresh, inspiring take on a strong topic
- Highly accessible angle - discusses ideas and techniques that can be applied to art anywhere and everywhere
- Author is a knowledgeable art historian with a witty, unique tone, and years of experience with leading art workshops for children
- Both UK and international sales have seen demand for more 'art' titles. A great opportunity for us to show support for suffering creative arts scene and fill a gap on our list.
- Subjects covered - Why Do we Make Art?, Brush Strokes, Patterns, The Power of Colour, Art Can be Anything, Symbols

Around the World in 80 Inventions

80 inventions from around the world

- A fun and accessible look at history and STEM with ties to the curriculum
- Written by emerging author Matt Ralphs, who has titles published with Nosy Crow, DK and Flying Eye
- Exciting talent Robbie Cathro has worked for clients including Aquila Magazine, Natural History Museum and Kingfisher.
- A travel theme inspired by postcards and travel posters gives this book a fun and engaging aesthetic
- Expertly checked by science writer Anne Rooney

Around the World in 80 Inventions

Ice Cream

"Dreaming from dessert"

14

On the hot day of August 18th, 1846, a young boy named John Henderson was walking through the streets of Glasgow, Scotland, when he noticed a group of people gathered around a man who was selling something. Henderson was curious and went to see what it was. He found a man who was selling a new invention called 'ice cream'. Henderson was amazed and bought some. He found it to be a delicious treat and from that day on, ice cream became a popular dessert.

Easy Ice Cream

The first ice cream was made from a mixture of cream and sugar. It was sold in a bowl and eaten with a spoon. The first ice cream machine was invented in 1790 by an Italian man named Francesco Persi. It was a hand-cranked machine that could make ice cream in a matter of minutes.

Bicycle

"Freedom on two wheels"

15

During the 19th century, people began to look for faster ways to travel. One of the first inventions was the 'boneshaker', which was a simple wooden frame with two wheels. It was called a 'boneshaker' because of the jolting motion it created. The first bicycle was invented in 1817 by a German man named Baron von Drais. It was called a 'velocipede' and was used by a few people, but it was not very popular. The first bicycle with a chain drive was invented in 1868 by a British man named James Starley. It was called a 'velocipede' and was used by a few people, but it was not very popular. The first bicycle with a chain drive was invented in 1868 by a British man named James Starley. It was called a 'velocipede' and was used by a few people, but it was not very popular.

Petition Penny-Farthing

The first bicycle was called a 'velocipede' and was used by a few people, but it was not very popular. The first bicycle with a chain drive was invented in 1868 by a British man named James Starley. It was called a 'velocipede' and was used by a few people, but it was not very popular.

Camera

"Tag along"

24

Although it may seem like a simple invention, the camera has a long history. The first camera was invented in 1816 by a French man named Nicéphore Niépce. It was called a 'chambre noire' and was used to create images. The first camera with a lens was invented in 1826 by a British man named William Henry Fox Talbot. It was called a 'calotype' and was used to create images. The first camera with a lens was invented in 1826 by a British man named William Henry Fox Talbot. It was called a 'calotype' and was used to create images.

Developed to Perfection

The first camera was called a 'chambre noire' and was used to create images. The first camera with a lens was invented in 1826 by a British man named William Henry Fox Talbot. It was called a 'calotype' and was used to create images.

High-Speed Train

"10-speed"

25

By the 19th century, people began to look for faster ways to travel. One of the first inventions was the 'boneshaker', which was a simple wooden frame with two wheels. It was called a 'boneshaker' because of the jolting motion it created. The first bicycle was invented in 1817 by a German man named Baron von Drais. It was called a 'velocipede' and was used by a few people, but it was not very popular. The first bicycle with a chain drive was invented in 1868 by a British man named James Starley. It was called a 'velocipede' and was used by a few people, but it was not very popular.

Marvelous Maglevs

The first bicycle was called a 'velocipede' and was used by a few people, but it was not very popular. The first bicycle with a chain drive was invented in 1868 by a British man named James Starley. It was called a 'velocipede' and was used by a few people, but it was not very popular.

Wind Turbine

"Harnessing the power of wind"

34

You might have seen a wind turbine up on a hill in the distance and not noticed it. Wind turbines are used to generate electricity from the wind. The first wind turbine was invented in 1890 by a Danish man named Poul la Cour. It was called a 'windmill' and was used to generate electricity. The first wind turbine with a generator was invented in 1890 by a Danish man named Poul la Cour. It was called a 'windmill' and was used to generate electricity.

Green Energy

The first wind turbine was called a 'windmill' and was used to generate electricity. The first wind turbine with a generator was invented in 1890 by a Danish man named Poul la Cour. It was called a 'windmill' and was used to generate electricity.

Helicopter

"A sailing way to fly"

35

When you think of a helicopter, you think of a machine that can fly. The first helicopter was invented in 1783 by two French men, the Montgolfier brothers. It was called a 'aérostat' and was used to transport people. The first helicopter with a rotor was invented in 1861 by a French man named Gustave Latimer. It was called a 'hélicoptère' and was used to transport people. The first helicopter with a rotor was invented in 1861 by a French man named Gustave Latimer. It was called a 'hélicoptère' and was used to transport people.

Versatile VTOLs

The first helicopter was called a 'aérostat' and was used to transport people. The first helicopter with a rotor was invented in 1861 by a French man named Gustave Latimer. It was called a 'hélicoptère' and was used to transport people.

Wheel

"The revolutionary design that makes the world go round"

17

Can you imagine a world without wheels? Apart from sledges and ships, there would be no vehicles – no carts, cabs, bikes, buses, trucks, trains, cars or aeroplanes. The first wheeled vehicles were animal-drawn carts with solid wooden wheels. They were invented in Mesopotamia (modern-day Iraq) around 3500 BCE. 300 years after the horizontal potter's wheel. These carts carried cargo to market and heavy loads, such as stone and timber for building projects. The horse-drawn chariot came next. In about 2500 BCE, chariot wheels were spoked rather than solid like a cartwheel, so they were faster and lighter. The wheel may be one of the simplest inventions, but without it our world would be completely different.

Potter's Wheel

The very first wheels were used to make pottery. The art of pottery began around 30,000 years ago. Originally, potters would shape clay into pots with their hands, but this took a long time. The Mesopotamians invented a better method in around 3500 BCE. The potter's wheel was a large stone disc balanced on a stick called an 'axle', which could be spun. By putting clay on the wheel and spinning it, the potter could shape the clay quickly into pots. We don't know for sure, but it seems likely that the potter's wheel led to the invention of the vehicle wheel.

Internet

"The world at your fingertips"

18

The invention of the Internet – a network of computers that 'speak' to each other – was a concentrated effort in the United States. The first computers were connected to each other in 1969, but scientists first began developing the Internet in the early 1950s during the Cold War (1947-1991), a time of heightened hostility between the USSR and the United States and when computers were the size of an entire room. The United States government wanted a communication system that couldn't be destroyed in a single attack, so they created ARPANET (Advanced Research Projects Agency Network): a series of linked computers across different locations, which allowed information to be relayed along telephone lines. The first message was sent in 1969. It was a single word: 'LOVE', but only the 'L' and the 'O' got through before the network crashed. By the end of the same year four computers were connected on the ARPANET. It took years to create the 'network protocol' that allows computers to transfer data and 'speak' to each other. From the 1970s this network grew into the global Internet, which now links billions of devices. Today, whatever you want – books, food, holidays, cars – with the Internet you simply click a button and wait for it to arrive. Social media sites allow people all over the world to communicate instantly. We can consume films, television shows, music and video games, and even do our banking online.

World Wide Web

The World Wide Web (WWW) is a gateway to the Internet. It's made up of search engines like Google and Safari, the Internet addresses (also called URLs) we type in, and the websites that appear on our screens. It was invented by a British computer scientist called Tim Berners-Lee in 1989 while working at CERN, a science research laboratory in Switzerland. The WWW made the Internet accessible to everyone, not just scientists and academics.

Up in the Canopy

Explore the jungle layer by layer with a huge fold-out surprise at the end.

- James Aldred's book *The Goshawk Summer* won the 2022 James Cropper Wainwright Prize for Nature Writing.
- Written from the perspective of real-life Emmy-nominated cameraman and explorer, James Aldred
- Stunningly illustrated - with artwork as rich and dense as the rainforest itself
- Huge fold-out tree at the back of the book, which readers can pore over.
- Matt lam, fluro pantone and spot UV finishes.

My First Book of Space

Explore the wonders of the cosmos in this gorgeously illustrated first guide to space.

- Split into four clear sections for guided reading and learning about the topic
- Charming illustrations by award-winning illustrator Aaron Cushley (won the SLA Information Book Award 2021 for *How Many Mice Make an Elephant*)
- Large format for lap-time reading, with busy pages to pore over again and again
- Includes a search-and-find element featuring a shooting star on every page
- *My First Book of Nature* has sold over 64,000 copies worldwide (as of September 2023)

My First Book of Weather

A bright first book about the weather

- *My First Book of Nature*, the first title in the series, has sold over 60,000 copies worldwide (as of July 2022)
- Comprised of four clear sections
- Sample contents: **What is weather?** Up in the air/The sun/The wind; **What's the weather today?** Land and sea/Nature's weather warnings/A storm is on the way; **World Weather** Cold Earth/Warm Earth/Climates; **Extreme Weather** Wild Weather Events/Hot and cold/Weird weather
- Includes a search-and-find element to look for in every scene and 4 tear-out wipe-clean spotting cards, with writing and drawing activities
- Consulted and *endorsed* by the Royal Meteorological Society
- Illustrated by Taiwanese artist Cinyee Chiu - bold, bright, fun and appealing to early readers

This visually extraordinary book presents the history of money as it has never been seen before – from coins to contactless, bankruptcy to billionaires

- Vibrant illustrations and dynamic layouts will appeal to the audience
- Digestible and easy-to-understand text by expert children's author, Alex Woolf.
- A global topic with growing relevance in today's world. There is a significant lack of publishing for children on this subject.
- Pantone and 100% foil cover finishes.

RICH AND POOR

THE HISTORY OF INEQUALITY

Inequality – the difference in wealth between the richest and the poorest – has been a feature of human societies since the dawn of time. In the early days, when everyone lived in small groups, the difference was not great. But as societies grew larger and more complex, the gap between the rich and the poor widened. In the 19th century, when the Industrial Revolution was in full swing, the gap became even wider. The rich became richer, and the poor became poorer. This was the beginning of the modern era of inequality.

WEALTH CONCENTRATION

One of the biggest reasons for inequality is the way that wealth tends to get concentrated in the hands of a few people. This is because the rich can invest their money in ways that the poor cannot. They can buy stocks, bonds, and real estate, which can all grow in value over time. The poor, on the other hand, often have to live on their wages, which are not enough to cover their needs. This means that they have to spend all their money on living expenses, and they have no money left over to invest. As a result, the rich get richer, and the poor get poorer.

THE COST OF INEQUALITY

There are many reasons for wealth inequality. Some people have more talent than others. Some people have more connections than others. Some people have more luck than others. But there are also many reasons for inequality that are beyond our control. For example, the way that our society is organized can lead to inequality. If we have a system where the rich can buy more influence than the poor, then we will have inequality. If we have a system where the rich can avoid paying taxes, then we will have inequality. If we have a system where the rich can get better education than the poor, then we will have inequality. These are all examples of how our society can lead to inequality.

WHAT'S WRONG WITH WEALTH INEQUALITY?

There are many problems with wealth inequality. One problem is that it can lead to social unrest. When the poor see that the rich are getting richer and richer, they may become angry. They may feel that the system is unfair, and they may want to change it. This can lead to protests, strikes, and even revolutions. Another problem is that inequality can lead to economic problems. When the poor have less money, they have less to spend. This means that the economy is slower growing. It also means that there are more people who are unemployed. This can lead to a vicious cycle where the poor get poorer and the economy gets worse.

GOLDEN YEARS

AN INTERNATIONAL SYSTEM

In the 1920s, the gold standard was formally adopted by many countries. This meant that the value of a country's currency was linked to the value of gold. This system was supposed to make it easier for countries to trade with each other. But it also had some problems. One problem was that it was very inflexible. If a country's economy was in trouble, it had to stick to the gold standard, even if it meant that its currency was overvalued. This could lead to unemployment and other economic problems.

THE COST OF WAR

The gold standard was also a problem for countries that had been involved in World War I. These countries had spent a lot of money on the war, and they had a lot of debt. They needed to raise money to pay back their debts, but the gold standard made it difficult to do so. They had to keep their currencies at a fixed value, even if it meant that they had to raise interest rates. This could lead to unemployment and other economic problems.

THE GOLD DUCK

In the 1920s, many countries were still using the gold standard. But there were some problems with it. One problem was that it was very inflexible. If a country's economy was in trouble, it had to stick to the gold standard, even if it meant that its currency was overvalued. This could lead to unemployment and other economic problems.

FROM COUNTERFEIT COINS TO FALSE NOTES

ALVES dos REIS

Alves dos Reis was a Portuguese man who was famous for his counterfeit coins. He was born in 1870 and lived in Lisbon. He was a very clever man, and he was able to make coins that were almost perfect. He was caught many times, but he always managed to escape. He was eventually caught in 1910 and was sentenced to prison. He died in 1930.

THE FIRST COUNTERFEIT

The first counterfeit coins were made in the 17th century. They were made by a man named John Bull. He was a very clever man, and he was able to make coins that were almost perfect. He was caught many times, but he always managed to escape. He was eventually caught in 1710 and was sentenced to prison. He died in 1730.

THE FIRST FALSE NOTE

The first false notes were made in the 18th century. They were made by a man named James Watson. He was a very clever man, and he was able to make notes that were almost perfect. He was caught many times, but he always managed to escape. He was eventually caught in 1790 and was sentenced to prison. He died in 1810.

FINANCIAL MARKETS

At regular markets people buy and sell things like food and clothing. At financial markets, people trade money-related assets. These include stocks and bonds. Stocks are shares in a company that the company sells to raise capital. Shareholders are paid dividends (regular sums paid out of the company's profits). Bonds are certificates issued by a government or corporation, promising to repay borrowed money at a fixed rate of interest. Financial markets can be physical places, like the New York Stock Exchange, or they can take place online.

THE FIRST BONDS

In the twelfth century, the government of Venice came up with a new way of raising money to fight a war. It offered its citizens certificates, known as prestiti, in exchange for a loan, promising to pay them back by a certain time, plus 5 per cent interest. These were the first government bonds. Before long they became a popular investment, and a market developed for the buying and selling of prestiti.

THE FIRST STOCKS

Founded in 1602, the Dutch East India Company was the first company to sell shares in its business to the public. The money it raised from this funded its voyages to the East Indies, and it paid its shareholders out of the profits from its trade in enslaved people and spices. The shares were traded in the Amsterdam Stock Exchange, also established that year.

THE DAILY NEWS

OCTOBER 1929 NEW YORK CITY

THE WALL STREET CRASH

FINANCIAL MARKETS CAN BE VOLATILE. A RUMOR OR A MINOR PIECE OF ECONOMIC NEWS CAN CAUSE BIG SWINGS IN PRICES. THE DESIRE TO MAKE MONEY OR AVOID LOSING IT IS A POWERFUL ONE, AND A

HERD INSTINCT CAN SOMETIMES TAKE OVER WITH PEOPLE STAMPEDING TO BUY OR SELL. THE MOST SPECTACULAR EXAMPLE OF THIS WAS THE WALL STREET CRASH OF 1929.

THE ROARING TWENTIES

The 1920s was boom time in the United States. There was a spirit of optimism in the country and it became fashionable to play the stock market. Share prices soon rocketed to a point where they represented a value far greater than the total worth of their companies' assets. This was now a 'mania' – a period when everyone, from wealthy financiers to common investors, lost touch with reality and seemed to believe that prices could keep rising forever.

AFTER EFFECTS

As a result of the crash, businesses were bankrupted, banks closed, millions lost their jobs and the world plunged into a deep and lasting economic depression. In Europe, extreme right-wing parties exploited the misery of mass unemployment, blaming 'foreigners' such as Jews. Germany's Nazi Party rose to power in 1933. The consequences for the world would be devastating.

DISASTER

The crash occurred at the end of October 1929, during three calamitous days of trading at the New York Stock Exchange on Wall Street, when huge numbers of people decided collectively it was time to sell. With so many sellers, there were few buyers, and share prices plummeted. In those three days, billions of dollars were wiped off the value of American companies. And over the following years the market kept on falling. By 1932, stocks had lost nearly 90 per cent of their pre-crash value.

From Cells to Ourselves

From the Big Bang to the abundance of life that surrounds us today, this beautiful book is the story of evolution, from the very first cells to ourselves.

- The third title in the *Balloon to the Moon* series, which won the 12-16 category in the British Book Design and Production Awards 2019
- A wonderful combination of mythology, science and history that takes readers on a journey through one of the most fascinating subjects in natural history
- Gill Arbuthnott is a former secondary school science teacher.
- Cover treatments: 100% foil, uncoated varnish

From Shore to Ocean Floor

From sandy beaches to mysterious, inky depths, this beautiful book is the story of ocean exploration.

- Sequel to *Balloon to the Moon*, winner of the 12-16 category in the British Book Design and Production Awards
- A wonderful combination of mythology, science and history that takes readers on a narrative journey through one of the world's most fascinating stories of exploration
- Gill Arbuthnott is a former secondary school science teacher.
- Made in consultation with the Maritime Museum.

From Shore to Ocean Floor

Imagine standing on a shore and looking out to sea. Even on the wildest day, the ocean is huge and mysterious. Black out and all that part of the sea, under the sun and moonlight, is like looking into a mirror. If the sea were not so mysterious, it would be a very boring place. It is the sea that has made the world what it is today. It is the sea that has made the world what it is today.

The sea has been a source of food and a place of refuge for people since the beginning of time. It has been a source of food and a place of refuge for people since the beginning of time. It has been a source of food and a place of refuge for people since the beginning of time.

From the first time a person stepped onto a beach, the sea has been a part of their lives. It has been a part of their lives from the first time a person stepped onto a beach. It has been a part of their lives from the first time a person stepped onto a beach.

And even today, the sea is a source of wonder and mystery. It is a source of wonder and mystery. It is a source of wonder and mystery. It is a source of wonder and mystery.

DEPTHS OF THE IMAGINATION

On old maps the oceans were often marked by the Latin words *Hic sunt leones* (Here be lions) or *Hic sunt dracones* (Here be dragons), because no one knew what might really be there. Over time people came up with all sorts of explanations, some of them more plausible than others.

STRANGE CREATURES

When sea creatures like giant octopuses, looking sharks or sperm whales washed up on shore, they had often disappeared so much that they were unrecognisable. Legends of sea monsters like the Kraken (a giant squid or octopus in Scandinavian folklore) therefore developed.

MERMAIDS AND MERMEN

Sailors reported sightings of strange creatures. Legends of mermaids and mermen are told around the world. They weren't all friendly like Hans Christian Andersen's *The Little Mermaid*, the sirens in Greek mythology and the German Lorelei lured sailors to their deaths. In the 16th century, explorer Christopher Columbus claimed to have seen three mermaids in the Caribbean, but he had probably seen manatees – large aquatic mammals. If the long songstress they feed on gets tangled around their heads, it can look like long, green hair.

Fake mermaids have been shown around the world. The first known one (Christianus Bontius 1571) was thought to be the head and body of a small monkey attached to the tail of a fish, and recently showed it was a clay and paper model with an added fish jaw and tail.

POPULAR CULTURE

Books and films often use the fact that we know so little about what lives under the ocean to unsettle us, famously with the huge whale in *Moby Dick*, by Herman Melville, and the great white shark in the 1975 film, *Jaws*. Though highly fictionalised, *Moby Dick* was based on a real event – the sinking of the US whaling ship *Essex* by a sperm whale in 1820.

In Jules Verne's novel *20,000 Leagues Under the Sea* (published 1870), the heroes pursue a giant narwhal only to find it is a submarine – the Nautilus – designed and piloted by the mysterious Captain Nemo. The Nautilus has many adventures as it travels beneath the oceans, including a visit to the under water city Atlantis and an attack by a giant squid.

A stunningly illustrated tribute for train lovers of all ages, celebrating the ingenuity of trains past, present and future.

- Sample contents: The First Railways; Steam Locomotions; The Ffestiniog Railway; The Orient Express; Freight Trains; The Baikonur Cosmodrome; Mail by Rail; The California Zephyr; Mountain Railways; The Darjeeling Himalayan Railway; Trams; Sky Lines; Railways At War; The Princess Christian; High-speed Rail; The Shinkansen
- Beautiful artwork by multi award-winning artist Ryo Takemasa
- Stunning journey through the history of locomotives, suitable for all ages
- Expertly written by railway historian, Alastair Steele

Locomotion

THE FIRST RAILWAYS

It is strange to think that they have only been around as we know them for about two hundred years.

At first steam engines were used in British mines in the 17th century to pump water. It wasn't long before engineers tried using steam power to propel a ship, and in 1802 the inventor Richard Trevithick built a very first working steam locomotive.

ELECTRIC LOCOMOTIVES

The first electric train was tested as far back as 1837. Unlike steam trains, electric locomotives do not carry fuel on-board. Instead, they are powered by electricity which can be supplied from overhead lines, a third rail or in storage such as batteries. Because electric trains can be powered by renewable energy sources, they are considered less polluting than steam or diesel trains.

Consisting of a small locomotive and three cars, it reached a speed of just 13km/h.

The *ETR 200* is a record-breaking electric passenger train. It is widely considered one of the first ever high-speed trains and was put into service in 1936. In 1939, it broke the speed record for trains by reaching just over 201km/h.

The ICE (InterCity Express) is one of Germany's most successful electric trains. The third generation ICE 3, can reach speeds of 300km/h. Since 2018, it has run on entirely **renewable energy** sources.

THE GAUGE

STEAM LOCOMOTIVES

Once the possibility of steam-powered engines had been realized, a whole host of locomotives were tried and tested around the world. Some proved too heavy, others too unreliable and some were too dangerous, but the arrival of one revolutionary design changed course of history. *Rocket*, designed by engineer Robert Stephenson and George Stephenson's son – see page 80 used to provide the prime of design for the vast majority of steam locomotives that follow.

DIESEL LOCOMOTIVES

In a diesel locomotive, the power comes from an engine that burns diesel oil. While a steam locomotive needed two people to crew it and hours to attain the right steam pressure, a diesel locomotive could simply be switched on and driven away, making them much easier and much cheaper to run. Rudolf Diesel patented his first diesel engine in 1898, but it wasn't until around 1912 that they were first used in a locomotive.

The famous DPG Class SVT 877 *Hamburg Flyer*, often referred to as the 'Flying Hamburger', was first put into service in 1933. Its smooth, rounded shape was influenced by Zeppelin airships allowing for minimal air resistance.

The *Del Rio*, built in 1956, was considered the most powerful diesel locomotive in the world at that time.

The *Intercity 125* is one of the most successful diesel trains of all time. So named because it was designed to cruise at 125 mph (about 201 km/h) when in service, it also holds the all-time speed record for diesel trains of 238 km/h, which it reached in 1987.

[illegible][illegible][illegible][illegible]

for the troops had two stories. The barracks had foundations of stone and the upper parts had a framework of wood, filled in with rubble and plastered over. The building would have been roofed in tiles, stone slates, or wooden shingles, depending on what materials were available locally.

The centurion himself had a suite of rooms to himself, including a separate bedroom and living room. Parts of his quarters may have been used as offices or storerooms.

Auxiliary soldiers' quarters

Over the years, chain mail might have been worn to protect the lower arms and body. The mail would be as far as the knees and not heavy!

Footed with leather sandals on the feet, their soles reinforced with iron studs. In colder climates, soldiers wore sturdy wooden clogs.

There were several different designs of helmets, but they normally possessed a pointed sword cut on the sides and the neck.

Gladiators had different patterns for different units and were clad in saragines.
